

LR1801

CMOS IC

1.0A FAST ULTRA LOW DROPOUT LINEAR REGULATOR

■ DESCRIPTION

The UTC **LR1801/LR1801AD** operate from a +1.5V ~ +6V input supply as fast ultra low-dropout linear regulators. Wide output voltage range options are available. The fast response characteristic to make UTC **LR1801/LR1801AD** suitable for low voltage microprocessor application. The low quiescent current operation and low dropout quality caused by the CMOS process.

The UTC **LR1801/LR1801AD** has low dropout voltage. The ground pin current is typically 60uA.

Output Voltage Precision: Multiple output voltage options are available and ranging from 1.2V ~ 5.0V at room temperature with a guaranteed accuracy of $\pm 1.5\%$, and $\pm 3.0\%$ when varying line and load.

The output voltage types of UTC **LR1801-xx** are fixed one in the IC and UTC **LR1801AD** are adjustable one.

■ FEATURES

- * Low Dropout Voltage
- * The Guaranteed Output Current is 1A DC
- * Output Voltage Accuracy $\pm 1.5\%$
- * Over temperature Protection And Over current Protection

HSOP-8

■ PIN CONFIGURATION

■ PIN DESCRIPTION

PIN NO.		PIN NAME	PIN DESCRIPTION
HSOP-8 (Fixed)	HSOP-8 (Adjustable)		
4	4	GND	GND
1	1	V _{OUT}	Output voltage
8	8	V _{IN}	Input voltage
2	7	ON/ $\overline{\text{OFF}}$	ON/OFF select pin, Active High.
3, 5, 6, 7	3, 5, 6,	NC	No connection
-	2	ADJ	Adjustable Pin

Note: The NC pin is electrically open.
The NC pin can be connected to V_{IN} or GND.

■ BLOCK DIAGRAM

Fixed Output Voltage

Adjustable Output Voltage

■ ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATINGS	UNIT
Input Voltage	V_{IN}	7	V
Shutdown Input Voltage	$V_{IN(SHDN)}$	-0.3 ~ V_{IN}	V
Maximum Operating Current (DC)		1	A
Power Dissipation (Note 3)	P_D	Internally Limited	
Junction Temperature	T_J	+125	°C
Storage Temperature	T_{STG}	-65 ~ +150	°C

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.

■ THERMAL DATA

PARAMETER	SYMBOL	RATINGS	UNIT	
Junction to Ambient	θ_{JA}	SOT-223	165	°C/W
		SOT-89	185	°C/W
		TO-252	115	°C/W
		HSOP-8	143	°C/W
Junction to Case	θ_{JC}	SOT-223	23	°C/W
		SOT-89	85	°C/W
		TO-252	20	°C/W
		HSOP-8	45	°C/W

■ ELECTRICAL CHARACTERISTICS (T_J = 25°C, unless otherwise specified.)

For LR1801xx

PARAMETER	SYMBOL	TEST CONDITIONS		MIN	TYP	MAX	UNIT
Input Voltage	V _{IN}			1.5		6	V

			$3.0V \leq V_{OUT(S)} \leq 3.5V$		60		
Thermal Shutdown detection temperature	T_{SD}	Junction temperature		150		°C	
Thermal Shutdown release temperature	T_{SR}	Junction temperature		120		°C	

Notes: 1. The UTC LR1801 output must be diode-clamped to ground. If used in a dual-supply system where the regulator load is returned to a negative supply.

2. Devices must be derated based on package thermal resistance at elevated temperatures.

3. $V_{OUT(S)}$: Specified output voltage

$V_{OUT(E)}$: Actual output voltage

Output voltage when fixing $I_{OUT}(=100ma)$ and inputting $V_{OUT(S)}+1.0V$

4. $V_{drop}=V_{IN1}-(V_{OUT3} \times 0.98)$

V_{OUT3} is the output voltage when $V_{IN}=V_{OUT(S)}+1.0V$ and $I_{OUT}=300mA$, $1000mA$.

5. The output current at which the output voltage becomes 95% of $V_{OUT(E)}$ after gradually increasing the output current.

6. The change in temperature [mV/°C] is calculated using the following equation.

$$\frac{\Delta V_{OUT}}{\Delta T_A} [mV/^\circ C] = V_{OUT(S)} [V] \times \frac{\Delta V_{OUT}}{\Delta T_A \times V_{OUT}} [ppm/^\circ C] \div 1000$$

7. The output current can be at least this value.

Due to restrictions on the package power dissipation, this value may not be satisfied. Attention should be paid to the power dissipation of the package when the output current is large.

This specification is guaranteed by design.

■ TYPICAL APPLICATION CIRCUIT

Fixed Output Voltage

(1) ON/ $\overline{\text{OFF}}$ pins must be pulled high through a 10k Ω pull-up resistor.

(2) Generally a series regulator may cause oscillation, depending on the selection of external parts. The following conditions are recommended for this IC. However, be sure to perform sufficient evaluation under the actual usage conditions for selection, including evaluation of temperature characteristics.

Input capacitor (C_{IN}): 2.2 μF or more
 Output capacitor (C_L): 2.2 μF or more

■ TYPICAL APPLICATION CIRCUIT (Cont.)

Adjustable Output Voltage

The Output Voltage may be adjustable for any output voltage between its 1.2V reference and its V_{DD} setting level. An external pair of resistors is required, as shown above.

The complete equation for the output voltage is described step by step as follows;

$$I_2 = I_{IC} + I_3 \quad (1)$$

$$I_3 = 1.2 / R_3 \quad (2)$$

Thus,

$$I_2 = I_{IC} + 1.2 / R_3 \quad (3)$$

Therefore,

$$V_{OUT} = 1.2 + R_2 \times I_2 \quad (4)$$

Put Equation (3) into Equation (4), then

$$\begin{aligned} V_{OUT} &= 1.2 + R_2 (I_{IC} + 1.2 / R_3) \\ &= 1.2 (1 + R_2 / R_3) + R_2 \times I_{IC} \end{aligned} \quad (5)$$

In 2nd term, or $R_2 \times I_{IC}$ will produce an error in V_{OUT} .

In Equation (5),

$$I_{IC} = 1.2 / R_{IC} \quad (6)$$

$$\begin{aligned} R_2 \times I_{IC} &= R_2 \times 1.2 / R_{IC} \\ &= 1.2 \times R_2 / R_{IC} \end{aligned} \quad (7)$$

For better accuracy, choosing $R_2 \ll R_{IC}$ reduces this error.
