## Description

The 'HC259 and 'HCT259 Addressable Latch features the low-power consumption associated with CMOS circuitry and has speeds comparable to low-power Schottky.

This latches three active modes and one reset mode. When both the Latch Enable ( $\overline{\mathrm{LE}}$ ) and Master Reset ( $\overline{\mathrm{MR}}$ ) inputs are low (8-line Demultiplexer mode) the output of the addressed latch follows the Data input and all other outputs are forced low. When both $\overline{M R}$ and $\overline{\mathrm{LE}}$ are high (Memory Mode), all outputs are isolated from the Data input, i.e., all latches hold the last data presented before the $\overline{\mathrm{LE}}$ transition from low to high. A condition of $\overline{\mathrm{LE}}$ low and $\overline{\mathrm{MR}}$ high (Addressable Latch mode) allows the addressed latch's output to follow the data input; all other latches are unaffected. The Reset mode (all outputs low) results when $\overline{\mathrm{LE}}$ is high and $\overline{\mathrm{MR}}$ is low.

3. $\mathrm{C}_{\mathrm{PD}}$ is used to determine the dynamic power consumption, per package.
4. $P_{D}=C_{P D} V_{C C}{ }^{2} f_{i}+\sum C_{L} V_{C C}{ }^{2} f_{O}$ where $f_{i}=$ Input Frequency, $f_{O}=$ Output Frequency, $C_{L}=$ Output Load Capacitance,
$\mathrm{V}_{\mathrm{CC}}=$ Supply Voltage.

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but Tl does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The $\mathrm{Pb}-\mathrm{Free} / \mathrm{Green}$ conversion plan has not been defined.
Pb -Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS

## compatible) as defined above.

Green (RoHS \& no $\mathbf{S b} / \mathrm{Br}$ ): Tl defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants ( Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
${ }^{(3)}$ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
