## ESD9X5VU

## 1-Line, Uni-directional, Ultra-low Capacitance

 Transient Voltage Suppressor
## Descriptions

The ESD9X5VU is a Uni-directional transient voltage suppressor (TVS) which provides a very high level protection for sensitive electronic components that may be subjected to electrostatic discharge (ESD). It is designed to replace multilayer varistors (MLV) in consumer equipment applications such as mobile phone, notebook, PAD, STB, LCD TV etc.

The ESD9X5VU incorporates one pair of ultra-low capacitance steering diodes plus a TVS diode.

The ESD9X5VU may be used to provide ESD protection up to $\pm 20 \mathrm{kV}$ (contact and air discharge) according to IEC61000-4-2, and withstand peak pulse current up to 4A for $8 / 20 \mu$ s pulse according to IEC61000-4-5.

The ESD9X5VU is available in FBP-02C package. Standard products are Pb -free and Halogen-free.
