Notes:

1. DC Interrupting Rating tested at rated voltage with time constant $<0.8$ msecs.
2. Nominal Resistance measured with $<10 \%$ rated current.
3. Nominal Melting ${ }^{2 \pi} \mathrm{t}$ measured at 1 msec . opening time.
4. Nominal Voltage Drop measured at rated current after temperature has stabilized.

Devices designed to carry out rated current for 4 hours minimum. It is recommended that devices be operated continuously at no more than $80 \%$ rated current. See "Temperature Re-rating Curve"for additional re-rating information.

Temperature Re-rating Curve

Note:

1. Re-rating depicted in this curve is in addition to the standard re-rating of $20 \%$ for continuous operation.

For continuous operation at 75 degrees celsius, the fuse should be rerated as follows: $I=(0.80)(0.85) I_{\text {RAT }}=(0.68) I_{\text {RAT }}$
