

8-Channel Source Driver

Features and Benefits

- TTL, DTL, PMOS, or CMOS compatible inputs
- 500 mA output source current capability
- Transient-protected outputs
- Output breakdown voltage to 50 V
- DIP or SOIC packaging

Package: 20-pin SOICW (suffix LW)

Not to scale

(drop-in replacement for discontinued 18-pin SOIC variants)

Description

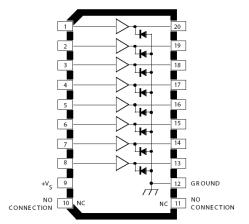

Recommended for high-side switching applications that benefit from separate logic and load grounds, these devices encompass load supply voltages to 50 V and output currents to -500 mA. These 8-channel source drivers are useful for interfacing between low-level logic and high-current loads. Typical loads include relays, solenoids, lamps, stepper and/or servo motors, print hammers, and LEDs.

All devices may be used with 5 V logic systems—TTL, Schottky TTL, DTL, and 5 V CMOS. The device packages offered are electrically interchangeable, and will withstand a maximum output off voltage of 50 V, and operate to a minimum of 5 V. All devices in this series integrate input current limiting resistors and output transient suppression diodes, and are activated by an active high input.

The package is a 20-pin wide-body SOIC with improved thermal characteristics compared to the 18-pin SOIC version it replaces (100% pin-compatible electrically).

The package is lead (Pb) free, with 100% matte-tin leadframe plating.

Simplified Block Diagram

(NC pins, 10 and 11, not present on discontinued 18-pin LW package)

Selection Guide

Part Number	Package	Packing	Ambient Temperature T _A (°C)
A2982SLWTR-T	20-pin SOICW	1000 per reel	-20 to 85

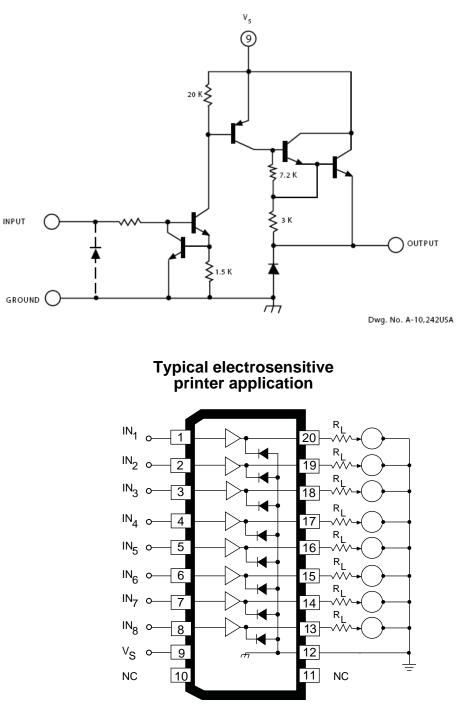

Absolute Maximum Ratings

Characteristic	Symbol	Notes	Rating	Units
Output Voltage Range	V _{CE}		5 to 50	V
Input Voltage	V _{IN}		20	V
Output Current	I _{OUT}		-500	mA
Package Power Dissipation	PD	See graph	-	-
Operating Ambient Temperature	T _A	Range S	-20 to 85	°C
Maximum Junction Temperature	T _J (max)		150	°C
Storage Temperature	T _{stg}		–55 to 150	°C

One of Eight Drivers

Pins 10 and 11 can float; other pins match discontinued 18-pin SOIC: 1 to 9 same, pins 12 to 20 match pins 10 to 18

8-Channel Source Driver

Characteristic	Symbol	Test Conditions	Test Fig.	Min.	Тур.	Max.	Units

ELECTRICAL CHARACTERISTICS^{1,2} at $T_A = +25^{\circ}C$ (unless otherwise specified).

¹Negative current is defined as coming out of (sourcing) the specified device terminal.

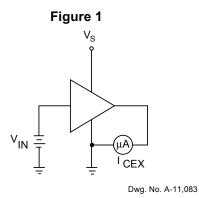

²All unused inputs must be connected to ground. Pull-down resistors (approximately 10 k Ω) are recommended for inputs that are allowed to float while power is being applied to V_S.

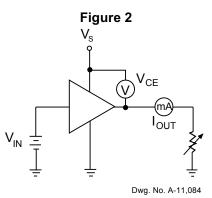

³All inputs simultaneously.

⁴Turn-off delay is influenced by load conditions. Systems applications well below the specified output loading may require timing considerations for some designs, i.e., multiplexed displays or when used in combination with sink drivers in a totem pole configuration.
