Inductance Tolerance: $M=\pm 20\%$, $N=\pm 30\%$

1.All test data is referenced to 25° C ambient.

2. Idc : DC current (A) that will cause an approximate riangle T of 40°C

3. Isat : DC current (A) that will cause Lo to drop approximately 30%

4. Operating Temperature Range -40°C to + 125°C

- 5. The part temperature (ambient + temp rise) should not exceed 125°C under worse case operating conditions. Circuit design , component placement, PWB trace size and thickness, airflow and other cooling provision all affect the part temperature. Part temperature should be verified in the end application.
- 6. The rated current as listed is either the saturation current or the heating current depending on which value is lower.

7. TEST FREQUENCY:100KHz,0.5V

TESTING INSTRUMENT L:Agilent/HP4284A Precision LCR Meter. Rdc:Chroma Millohmmeter16502 or equivalent.

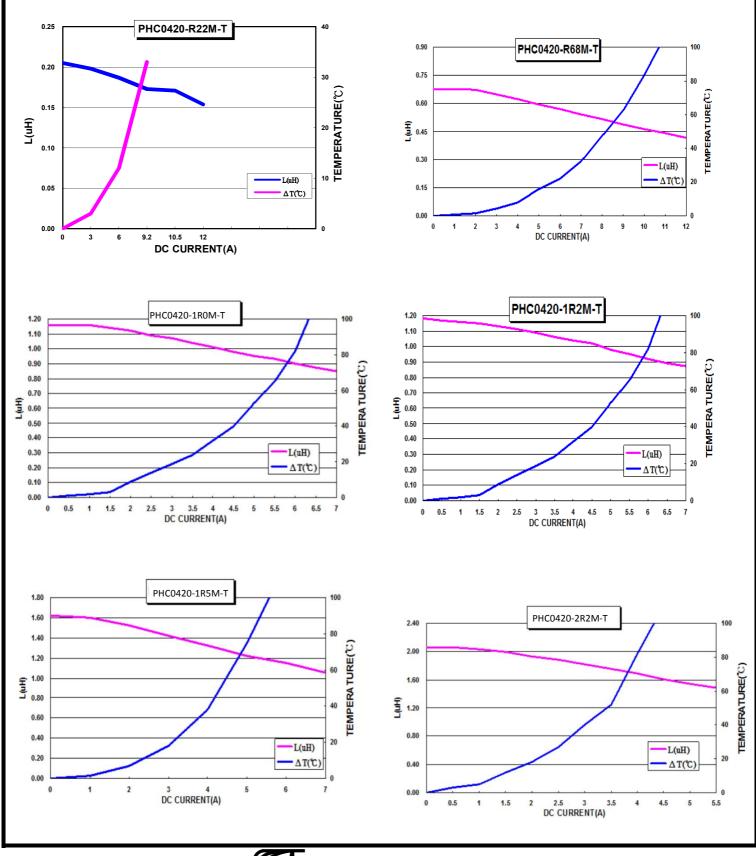

8. The moisture sensitivity level (MSL) of products is level 2.

6. Reliability Test

Item	Specifications	Test conditions			
Solderability	The metalized area must have 90% minimum solder coverage.	Dip pads in flux and dip in solder pot(96.5 Sn/3.5 Ag solder) at $255^{\circ}C \pm 5^{\circ}C$.			
Resistance to soldering heat	There must be no case deformation or change in dimensions. Inductance must not change more than the stated tolerance.	Inductors shall be reflowed onto a PC board using 96.5 Sn/3.5 Ag solder paste. Solder process shall be at a maximum temperature of 260°C. For 96.5 Sn/3.5 Ag solder paste:>217°C for 90 seconds			
High temperature resistance	There must be no case deformation or change in dimensions. Inductance must not change more than the stated tolerance.	Inductors shall be subjected to temperature 125±2°C for 100 hours. Measure the test items after leaving the inductors at room temperature and humidity for 2 hours.			
Static Humidity	Inductors must not have a shorted or openwinding.	Inductors shall be subjected to temperature $85\pm2^{\circ}$ C and 90 to 95%RH. for 100 hours. Measure the test items after leaving the inductors at room temperature and humidity for 2 hours.			
Low temperature resistance	There must be no case deformation or change in dimensions. Inductance must not change more than the stated tolerance.	Inductors shall be subjected to temperature -40±2°C for 100 hours. Measure the test items after leaving the inductors at room temperature and humidity for 1 to 2 hours.			
Temperaure cycle	Change from an initial value Inductance: within ±10%	The specimen shall be subjected to 10 continuous cycles of temperature change of -40° C for 30 min and 125° C for 30 min with the transit period of 3 mir or less. Then it shall be stabilized under standard atmospheric conditions for 1 hr before measurement.
