

HIGH EFFICIENCY, 250-mA STEP-DOWN CHARGE PUMP

FEATURES

- Regulated 3.3-V, 1.8-V, 1.5-V, or Adjustable Output Voltage
- Up to 250-mA Output Current
- 1.8-V to 6.5-V Input Voltage
- Up to 90% Efficiency
- Output Voltage Tolerance 3% Over Line, Load, and Temperature Variation
- Device Quiescent Current Less Than 40 μ A
- Output Voltage Supervisor Included (Power Good)
- Internal Soft Start
- Load Isolated From Battery During Shutdown
- Overtemperature and Overcurrent Protected
- Micro-Small 10-Pin MSOP Package
- EVM Available, TPS60500EVM-193

- DSP Core Supply
- Cellular Phones
- Portable Instruments
- Internet Audio Player
- PC Peripherals
- USB Powered Applications

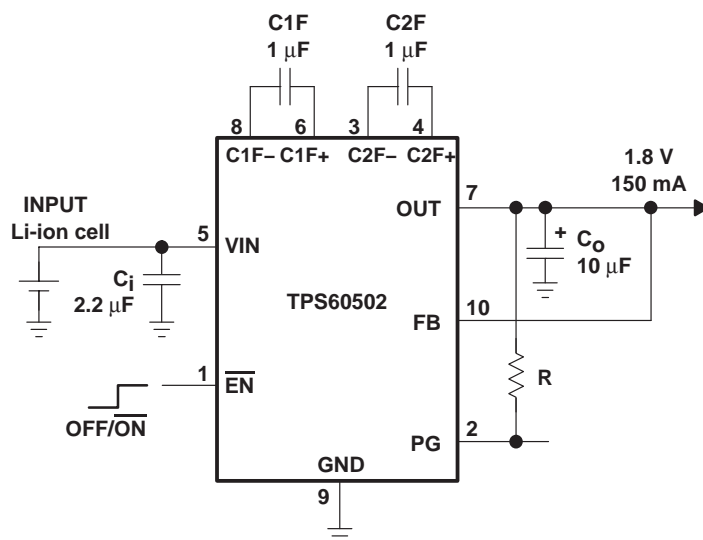

DESCRIPTION

The TPS6050x devices are a family of step-down charge pumps that generate a regulated, fixed 3.3-V, 1.8-V, 1.5-V, or adjustable output voltage. Only four small ceramic capacitors are required to build a complete high efficiency dc/dc charge pump converter. To achieve the high efficiency over a wide input voltage range, the charge pump automatically selects between three different conversion modes. The output can deliver a maximum of 250-mA output current. The power good function supervises the output voltage and goes high when the output voltage rises to 97% of its nominal value.

APPLICATIONS

- Personal Digital Assistants

Typical Application Circuit

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

PRINCIPLES OF OPERATION

The TPS6050x charge pumps provide a regulated output voltage in the range of 0.8 V to 3.3 V from an input voltage of 1.8 V to 6.5 V. The devices use switched capacitor fractional conversion to achieve high efficiency over the entire input and output voltage range. Regulation is achieved by sensing the output voltage and enabling the internal switches as needed to maintain the selected output voltage. This skip-mode regulation is used over a load range from 0 mA to 150 mA. At a higher output current, the device works in a linear regulation mode.

The TPS6050x circuits consist of an oscillator, a voltage reference, an internal resistive feedback circuit (fixed voltage version only), an error amplifier, two charge pump stages with MOSFET switches, a shutdown/start-up circuit, and a control circuit.

short-circuit current limit and thermal protection

When the output voltage is lower than 0.6 V, the output current is limited to 300 mA typically. The device also has a thermal protection which reduces the output current when the temperature of the chip exceeds 150°C. The output current declines to 0 mA when the chip temperature rises to 160°C.

enable

Driving $\overline{\text{EN}}$ high disables the converter. This disables all internal circuits, reducing input current to only 0.05 μA . Leakage current drawn from the output pin OUT is a maximum of 1 μA . The device exits shutdown once $\overline{\text{EN}}$ is set low (see start up procedure described below). The typical no-load start-up time is 80 μs . When the device is disabled, the load is isolated from the input, an important feature in battery-operated products because it extends the battery shelf life.

start-up procedure

The device is enabled when $\overline{\text{EN}}$ is set from logic high to logic low. The charge pump stages immediately start switching to transfer energy to the output. In start-up until the output voltage has reached 0.6 V, the input current is limited to 300 mA typically.

power good detector

The power good (PG) output is an open-drain output on all TPS6050x devices. The PG output pulls low when the output is out of regulation. When the output rises to within 97% of regulation, the power good output goes high. In shutdown, power good is pulled low. In normal operation, an external pullup resistor is typically used to connect the PG pin to V_{O} or V_{I} . If the PG output is not used, it should remain unconnected.

Figure 21. Power Good Timing Diagram

PRINCIPLES OF OPERATION

The TPS6050x devices use fractional conversion to achieve high efficiency over a wide input and output voltage range. Depending on the input to output voltage ratio and output current, internal circuitry switches between an LDO mode, a 2/3x mode, a 0.5x mode, and a 1/3x mode.

LDO conversion mode

In the LDO mode, the flying capacitors are no longer used for transferring energy. The switches 1, 2, 5, and 6 are closed and connect the input directly with the output. This mode is automatically selected if the input to output voltage ratio does not allow the use of another conversion mode with higher efficiency. In LDO mode, the regulation is done by switching off MOSFET 2 and 6 until the output current reaches the *linear-skip* current (150 mA typ). At a higher output current, the output voltage is regulated by controlling the resistance of the switch. The minimum input to output voltage difference required for regulation is 1 V.

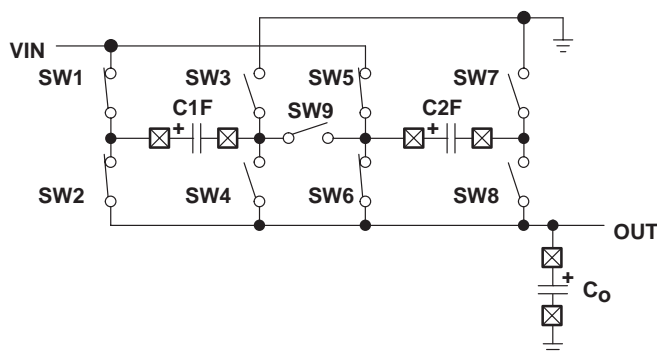

Figure 22. LDO Conversion Mode

2/3x conversion mode

In the first cycle, the two flying capacitors are connected in parallel and are charged up in series with the output capacitor. In the second cycle, the flying capacitors are connected in series. This mode provides higher efficiency than the LDO mode because the current into VIN is only 2/3 of the output current. The mode is automatically selected if the input voltage is higher than 3/2 of the selected output voltage.

Figure 23. 2/3x Conversion Mode

PRINCIPLES OF OPERATION

0.5x conversion mode

This conversion mode is internally selected if the input to output voltage ratio is greater than two (e.g. 3.6 V to 1.5 V conversion). In the 0.5x mode, the flying capacitors and the switches always work in parallel, which reduces the resistance of the circuit compared to the other modes. In the first cycle, the flying capacitors are charged in series with the output capacitors. In the second cycle, the flying capacitors are connected in parallel with the output capacitor, which discharges the flying capacitors.

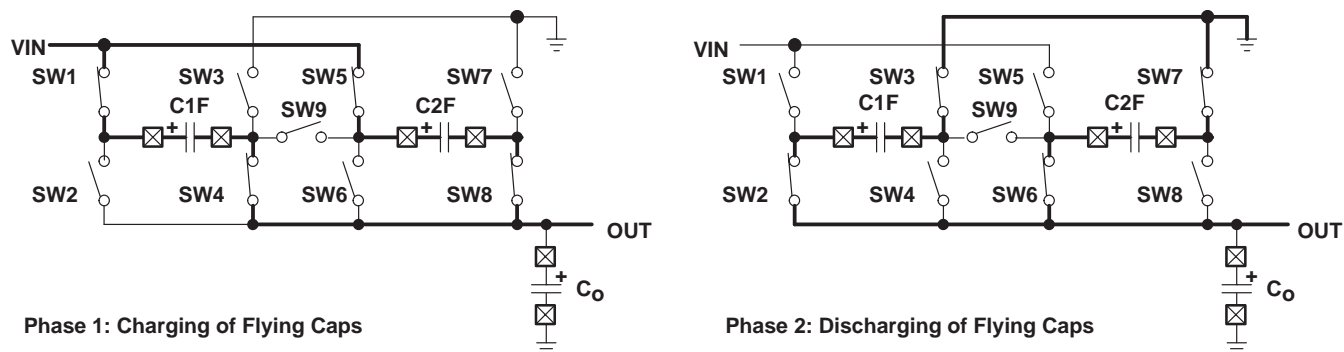

Figure 24. 0.5x Conversion Mode

1/3x conversion mode

This mode was implemented to provide high efficiency even with an input to output voltage ratio greater than three (e.g. 5 V to 1.5 V conversion). In the first cycle, the two flying capacitors are charged in series with the output capacitor. In the next step, the flying capacitors which are charged to $V_{IN}/3$, are connected in parallel to the output capacitor.

Figure 25. 1/3x Conversion Mode

DESIGN PROCEDURE

capacitor selection

Designed specifically for space-critical battery-powered applications, the complete converter requires only four external capacitors. The capacitor values are closely linked to the required output current, output noise, and ripple requirements. The input capacitor improves system efficiency by reducing the input impedance, and it also stabilizes the input current. The value of the output capacitor, C_o , influences the stability of the voltage regulator. The minimum required capacitance for C_o is 4.7 μF . Depending on the maximum allowed output ripple voltage and load current, larger values can be chosen. For an output current greater than 150 mA, a minimum output capacitor of 22 μF is required. Table 1 shows ceramic capacitor values recommended for low output voltage ripple.

Table 1. Recommended Capacitors

| MANUFACTURER | PART NUMBER | SIZE | CAPACITANCE | TYPE |
|--------------|----------------|------|-------------------------------|---------|
| Taiyo Yuden | LMK212BJ105KG | 0805 | 1 μF | Ceramic |
| | LMK212BJ225MG | 0805 | 2.2 μF | Ceramic |
| | EMK316BJ225KL | 1206 | 2.2 μF | Ceramic |
| | LMK316BJ475KL | 1206 | 4.7 μF | Ceramic |
| | JMK316BJ106KL | 1206 | 10 μF | Ceramic |
| TDK | C2012X5R1C105M | 0805 | 1 μF | Ceramic |
| | C2012X5R1A225M | 0805 | 2.2 μF | Ceramic |
| | C2012X5R0J106M | 0805 | 10 $\mu\text{F}/6.3\text{ V}$ | Ceramic |

Table 2 contains a list of manufacturers of ceramic capacitors. Ceramic capacitors provide the lowest output voltage ripple because they typically have the lowest ESR-rating.

APPLICATION INFORMATION

typical application circuit for fixed voltage and adjustable voltage versions

Figure 26 shows the typical operation circuit. The TPS60501 to TPS60503 devices use an internal resistor divider for sensing the output voltage. The FB pin must be connected externally with the output. For maximum output current and best performance, 4 ceramic capacitors are recommended. For lower currents or higher allowed output voltage ripple, other capacitors can also be used. *It is recommended that the output capacitor has a minimum value of 4.7 μF .* This value is necessary to maintain a stable operation of the system. Flying capacitors lower than 1 μF can be used, but this decreases the maximum output power. This means that the device works in linear mode with lower output currents. The device works in the linear mode for an output current of greater than 150 mA. With an output current greater than 150 mA, an output capacitor of $\geq 22\ \mu\text{F}$ must be used. Figure 26 shows that two 10- μF capacitors can also be used in parallel.

APPLICATION INFORMATION

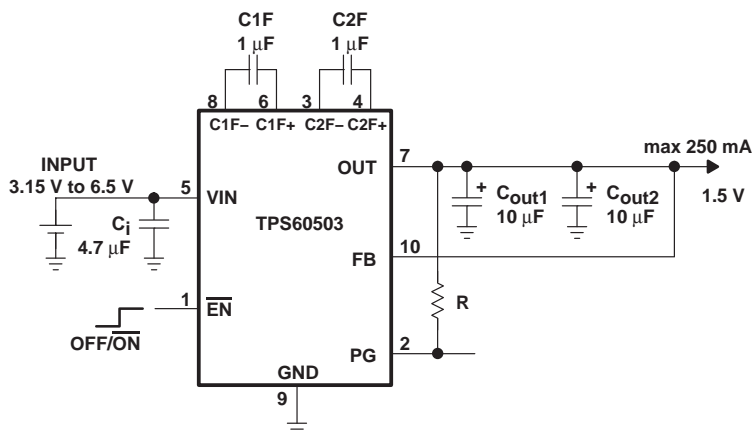

$$R1 = R2 \left(\frac{V_O}{V_{FB}} \right) - R2$$

$$V_O = \frac{(R1 + R2)}{R2} \times V_{FB}$$

Power supply with 1,4 mm maximum height for 250-mA output current

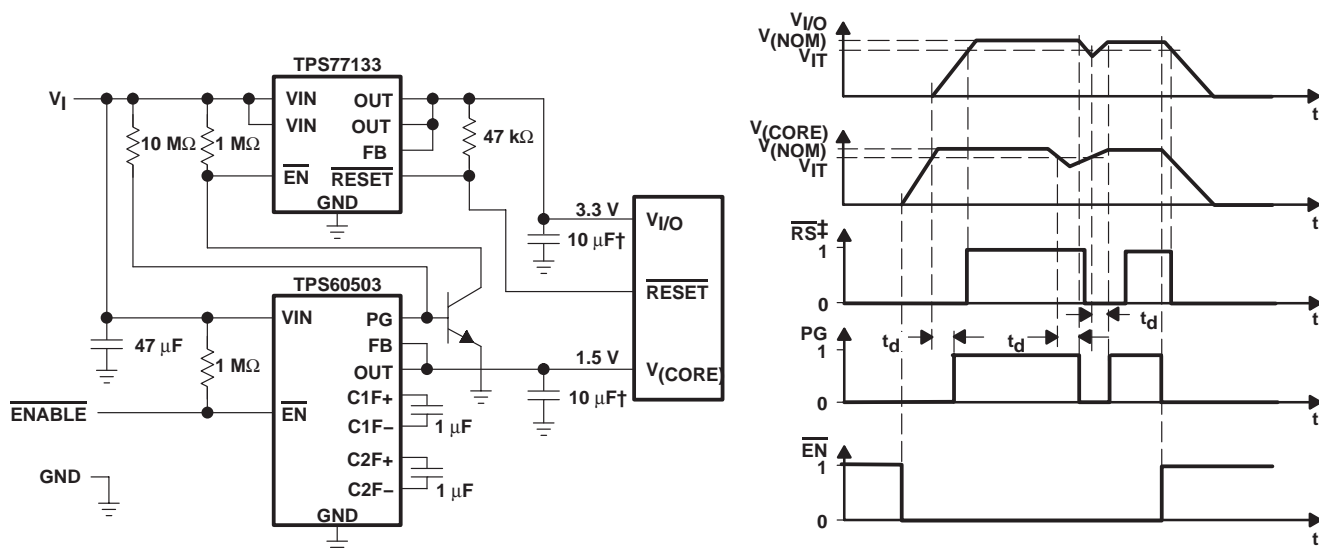

Figure 26. Typical Operating Circuit

APPLICATION INFORMATION

DSP supply with sequencing

This application shows a power supply for a typical DSP. DSPs usually have core voltages in the 1-V to 2.5-V range, whereas the voltage at the I/O-pins (I/O voltage) is typically 3.3 V to interface with external logic and converters. Therefore, a power supply with two output voltages is required. The application works with an input voltage in the range of 3.5 V to 6.5 V. The maximum output current is 150 mA on each output.

The supply is enabled by pulling the enable pin (\overline{EN} of the TPS60503) to GND. The step-down charge pump starts and its power good (PG) output goes high. This enables the LDO which powers the I/O lines and generates a reset signal for the DSP. Figure 27 shows the timing diagram of the start-up/shutdown procedure.

† Recommended value for stability, DSP may require higher capacitance.
‡ RS is the RESET output of the TPS77133.

power supply with dynamic voltage scaling

Dynamic voltage scaling of the core can be used to reduce power consumption of a digital signal processor (DSP). During the periods, in which the maximum DSP performance is not required, the core voltage can be reduced when the DSP operates at a lower clock-rate. This idea is called runtime power control (RPC) and is supported by modern DSPs. RPC extends battery-life time in handheld applications, like MP3 players, digital cameras, PDA.

The supply of DSPs is separated into I/O interface and core supply. Interface is mostly powered by a 3.3-V system supply, whereas core supply achieves voltages far below 1.5 V. The TPS60500 is powered by the 3.3-V system supply. The DSP itself selects the applied core voltage.

The core voltage is switched between 1.5 V and 1.1 V by changing the feedback resistor network. A MOSFET modifies the voltage divider at the feedback (FB) pin by switching a resistor. In this application, a general purpose MOSFET BSS138 is used with a $V_{GS(th)}$ of 1.6 V. A DSP 3.3-V I/O port drives the gate. The feedback resistor network consists of R2, R3 and R4. $C_{(ff)}$ is the fast forward capacitor for improved line regulation.

APPLICATION INFORMATION

power supply with dynamic voltage scaling (continued)

General requirements for the application:

- Output voltage1 (DSP core): 1.5 V ±0.08 V
- Output voltage 2 (DSP core): 1.1 V +0.1 V –0.05 V
- Input voltage: 3 V to 3.3 V
- Output current: 150 mA (10R load)

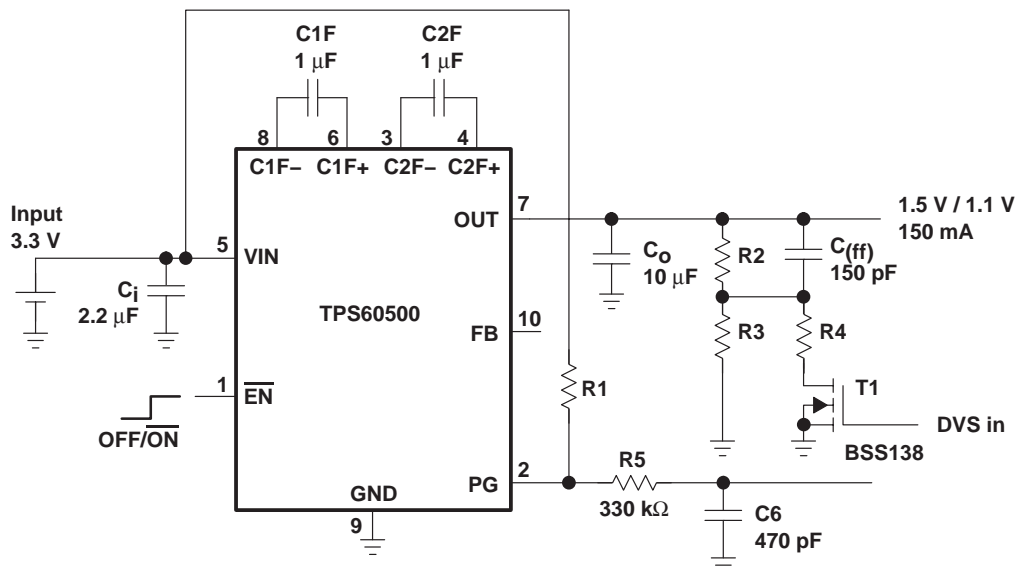

Figure 29. Dynamic Voltage Scaling Application

To keep current through the adjustment resistor network as low as possible, the resistors are calculated to:

V_{out1} adjusted by R2 and R3 (1)

$$R3 = \frac{V_{FB}}{\frac{V_{out1} - V_{FB}}{R2}} \quad \begin{aligned} V_{out1} &= 1.1 \text{ V,} \\ R2 &= 180 \text{ k}\Omega, \\ V_{ref} &= 0.80 \text{ V,} \\ \rightarrow R3 &= 470 \text{ k}\Omega \end{aligned}$$

V_{out2} adjusted by R2 and $R_x = R3 || R4$ (2)

$$R_x = \frac{V_{FB} \times R2}{(V_{out2} - V_{FB})} \quad \begin{aligned} V_{out2} &= 1.5 \text{ V,} \\ \rightarrow R_x &= 206 \text{ k}\Omega \end{aligned}$$

$$\frac{1}{R_x} = \frac{1}{R3} + \frac{1}{R4} \quad \rightarrow R4 = \frac{1}{\frac{1}{R_x} - \frac{1}{R3}} \quad \rightarrow R4 = 360 \text{ k}\Omega \quad (3)$$

APPLICATION INFORMATION

internet audio power supply

The input voltage from a single or dual NiCd, NiMH or alkaline cell is boosted to 3.3 V. This voltage is used as system supply for the application and as an input voltage for the step-down charge pump which is used to provide the core voltage for a DSP.

Figure 30. Internet Audio Power Supply

APPLICATION INFORMATION

layout and board space

All capacitors should be soldered as close as possible to the IC. A PCB layout proposal for a two-layer board is shown in Figure 31. Care has been taken to connect all capacitors as close as possible to the circuit to achieve optimized output voltage ripple performance.

|------------------|---------------|--------------|--------------------|------|----------------|----------------------------|----------------------------|----------------------|--------------|-------------------------|-------------------------|
| TPS60500DGS | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU CU NIPDAUAG | Level-1-260C-UNLIM | -40 to 85 | AVB | Samples |
| TPS60500DGSG4 | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVB | Samples |
| TPS60500DGSR | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU CU NIPDAUAG | Level-1-260C-UNLIM | -40 to 85 | AVB | Samples |
| TPS60500DGSRG4 | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVB | Samples |
| TPS60501DGS | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVC | Samples |
| TPS60501DGSG4 | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVC | Samples |
| TPS60501DGSR | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVC | Samples |
| TPS60501DGSRG4 | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVC | Samples |
| TPS60502DGS | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVD | Samples |
| TPS60502DGSG4 | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVD | Samples |
| TPS60502DGSR | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVD | Samples |
| TPS60502DGSRG4 | ACTIVE | VSSOP | DGS | 10 | 2500 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVD | Samples |
| TPS60503DGS | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVE | Samples |
| TPS60503DGSG4 | ACTIVE | VSSOP | DGS | 10 | 80 | Green (RoHS & no Sb/Br) | CU NIPDAU | Level-1-260C-UNLIM | -40 to 85 | AVE | Samples |

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

| Device | Package Type | Package Drawing | Pins | SPQ | Reel Diameter (mm) | Reel Width W1 (mm) | A0 (mm) | B0 (mm) | K0 (mm) | P1 (mm) | W (mm) | Pin1 Quadrant |
|--------------|--------------|-----------------|------|------|--------------------|--------------------|---------|---------|---------|---------|--------|---------------|
| TPS60500DGSR | VSSOP | DGS | 10 | 2500 | 330.0 | 12.4 | 5.3 | 3.4 | 1.4 | 8.0 | 12.0 | Q1 |
| TPS60501DGSR | VSSOP | DGS | 10 | 2500 | 330.0 | 12.4 | 5.3 | 3.4 | 1.4 | 8.0 | 12.0 | Q1 |
| TPS60502DGSR | VSSOP | DGS | 10 | 2500 | 330.0 | 12.4 | 5.3 | 3.4 | 1.4 | 8.0 | 12.0 | Q1 |

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

| Device | Package Type | Package Drawing | Pins | SPQ | Length (mm) | Width (mm) | Height (mm) |
|--------------|--------------|-----------------|------|------|-------------|------------|-------------|

DGS (S-PDSO-G10)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion.
 - D. Falls within JEDEC MO-187 variation BA.

DGS (S-PDSO-G10)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
