

## LT1013x Dual Precision Operational Amplifier

### 1 Features

- Single-Supply Operation
  - Input Voltage Range Extends to Ground
  - Output Swings to Ground While Sinking Current
- Phase Reversal Protection
- Input Offset Voltage
  - 150  $\mu\text{V}$  Maximum at 25°C for LT1013AM
- Offset-Voltage Temperature Coefficient
  - 2  $\mu\text{V}/^\circ\text{C}$  Maximum for LT1013AM
- Input Offset Current
  - 0.8 nA Maximum at 25°C for LT1013AM
- High Gain
  - 1.5  $\text{V}/\mu\text{V}$  Minimum ( $R_L = 2 \text{ k}\Omega$ ) for LT1013AM
  - 0.8  $\text{V}/\mu\text{V}$  Minimum ( $R_L = 600 \text{ k}\Omega$ ) for LT1013AM
- Low Supply Current
  - 0.5 mA Maximum at  $T_A = 25^\circ\text{C}$  for LT1013AM
- Low Peak-to-Peak Noise Voltage
  - 0.55  $\mu\text{V}$  Typical
- Low Current Noise
  - 0.07  $\text{pA}/\sqrt{\text{Hz}}$  Typical
- For Die Only Option, See [LT1013-DIE](#)

### 2 Applications

- Thermocouple Amplifiers
- Low-Side Current Measurement
- Instrumentation Amplifiers

### 3 Description

The LT1013x devices are dual precision operational amplifiers, featuring high gain, low supply current, low noise, and low-offset-voltage temperature coefficient.

The LT1013x devices can be operated from a single 5-V power supply; the common-mode input voltage range includes ground, and the output can also swing to within a few millivolts of ground. Crossover distortion is eliminated. The LT1013x can be operated with both dual  $\pm 15\text{-V}$  and single 5-V supplies.

The LT1013C and LT1013D are characterized for operation from 0°C to 70°C. The LT1013DI is characterized for operation from  $-40^\circ\text{C}$  to 105°C. The LT1013M, LT1013AM, and LT1013DM are characterized for operation over the full military temperature range of  $-55^\circ\text{C}$  to 125°C.

**Device Information<sup>(1)</sup>**

PART NUMBER	PACKAGE (PINS)	BODY SIZE (NOM)
LT1013D LT1013DD	SOIC (8)	4.90 mm x 3.91 mm
LT1013P LT1013DP	PDIP (8)	9.81 mm x 6.35 mm
LT1013MFK LT1013AMFK	LCCC (20)	8.89 mm x 8.89 mm
LT1013MJG LT1013AMJG	CDIP (8)	9.60 mm x 6.67 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

### Pin Functions

NAME	PIN			I/O	DESCRIPTION
	SOIC	LCCC	CDIP, PDIP		
1IN+	1	7	3	I	Noninverting input for channel 1
1IN-	8	5	2	I	Inverting input for channel 1
1OUT	7	2	1	O	Output for channel 1
2IN+	3	12	5	I	Noninverting input for channel 2
2IN-	4	15	6	I	Inverting input for channel 2
2OUT	5	17	7	O	Output for channel 2
NC	—	1, 3, 4, 6, 8, 9, 11, 13, 14, 16, 18, 19	—	—	No internal connection
VCC+	6	20	8	—	Positive supply Voltage
VCC-	2	10	4	—	Negative supply Voltage

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC+} - V_{CC-}$	Supply voltage <sup>(2)</sup>	-0.3	44	V
$V_I$	Input voltage (any input)	$V_{CC-} - 5$	$V_{CC+}$	V
	Differential input voltage <sup>(3)</sup>		$\pm 30$	V
	Duration of short-circuit current at (or below) 25°C <sup>(4)</sup>	Unlimited		
	Case temperature for 60 s	FK package	260	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 s	JG package	300	°C
$T_J$	Operating virtual junction temperature		150	°C
$T_{stg}$	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Supply voltage is  $V_{CC+}$  with respect to  $V_{CC-}$ .
- (3) Differential voltage is  $IN+$  with respect to  $IN-$ .
- (4) The output may be shorted to either supply.

### 6.2 ESD Ratings

		VALUE	UNIT
<b>LT1013 in D and P packages</b>			
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 1000$
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 500$
<b>LT1013D in D and P packages</b>			
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 1000$
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 500$

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{CC+} - V_{CC-}$	Supply voltage	5	30	V
$T_A$	Ambient temperature	LT1013C, LT1013D	0	70
		LT1013DI	-40	105
		LT1013M, LT1013AM, LT1013DM	-55	125
$V_{ICM}$	Input common-mode voltage	LT1013C, LT1013D, LT1013DI	$V_{CC-}$	$V_{CC+} - 2$
		LT1013M, LT1013AM, LT1013DM	$V_{CC-} + 0.1$	$V_{CC+} - 2$

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	LT1013x				UNIT
	D (SOIC)	P (PDIP)	FK (LCCC)	JG (CDIP)	
	8 PINS	8 PINS	20 PINS	8 PINS	
R <sub>θJA</sub> Junction-to-ambient thermal resistance <sup>(2)(3)</sup>	101.6	49.5	—	—	°C/W
R <sub>θJC(top)</sub> Junction-to-case (top) thermal resistance	47.6	38.7	35.7 <sup>(4)</sup>	58.5 <sup>(4)</sup>	°C/W
R <sub>θJB</sub> Junction-to-board thermal resistance	42	26.7	34.8	82.9	°C/W
ψ <sub>JT</sub> Junction-to-top characterization parameter	8.3	15.9	—	—	°C/W
ψ <sub>JB</sub> Junction-to-board characterization parameter	41.5	26.6	—	—	°C/W
R <sub>θJC(bot)</sub> Junction-to-case (bottom) thermal resistance	—	—	4.0 <sup>(4)</sup>	10.8 <sup>(4)</sup>	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.
- (2) Maximum power dissipation is a function of T<sub>J(max)</sub>, R<sub>θJA</sub>, and T<sub>A</sub>. The maximum allowable power dissipation at any allowable ambient temperature is P<sub>D</sub> = (T<sub>J(max)</sub> - T<sub>A</sub>) / R<sub>θJA</sub>. Operating at the absolute maximum T<sub>J</sub> of 150°C can affect reliability. Due to variation in individual device electrical characteristics and thermal resistance, the built-in thermal overload protection may be activated at power levels slightly above or below the rated dissipation.
- (3) The package thermal impedance is calculated in accordance with JESD 51-7.
- (4) R<sub>θJC(top)</sub> and R<sub>θJC(bot)</sub> thermal impedances are calculated in accordance with MIL-STD-883 for LCCC and CDIP

## 6.5 Electrical Characteristics: LT1013C, ±15 V

at specified free-air temperature, V<sub>CC±</sub> = ±15 V, V<sub>IC</sub> = 0 (unless otherwise noted)

PARAMETER	TEST CONDITIONS	T <sub>A</sub> <sup>(1)</sup>	MIN	TYP <sup>(2)</sup>	MAX	UNIT
V <sub>IO</sub> Input offset voltage	R <sub>S</sub> = 50 Ω	25°C		60	300	μV
		Full range			400	
α <sub>VIO</sub> Temperature coefficient of input offset voltage		Full range		0.4	2.5	μV/°C
Long-term drift of input offset voltage		25°C		0.5		μV/mo
I <sub>IO</sub> Input offset current		25°C		0.2	1.5	nA
		Full range			2.8	
I <sub>IB</sub> Input bias current		25°C		-15	-30	nA
		Full range			-38	
V <sub>ICR</sub> Common-mode input voltage range	Recommended range	25°C	-15		13.5	V
		Full range	-15		13	
V <sub>OM</sub> Maximum peak output voltage swing	R <sub>L</sub> = 2 kΩ	25°C	±12.5	±14		V
		Full range	±12			
A <sub>VD</sub> Large-signal differential voltage amplification	V <sub>O</sub> = ±10 V, R <sub>L</sub> = 600 Ω	25°C	0.5	0.2		V/μV
	V <sub>O</sub> = ±10 V, R <sub>L</sub> = 2 kΩ	25°C	1.2	7		
		Full range	0.7			
CMRR Common-mode rejection ratio	V <sub>IC</sub> = -15 V to 13.5 V	25°C	97	114		dB
	V <sub>IC</sub> = -14.9 V to 13 V	Full range	94			
k <sub>SVR</sub> Supply-voltage rejection ratio (ΔV <sub>CC</sub> /ΔV <sub>IO</sub> )	V <sub>CC±</sub> = ±2 V to ±18 V	25°C	100	117		dB
		Full range	97			
Channel separation	V <sub>O</sub> = ±10 V, R <sub>L</sub> = 2 kΩ	25°C	120	137		dB
r <sub>id</sub> Differential input resistance		25°C	70	300		MΩ
r <sub>ic</sub> Common-mode input resistance		25°C		4		GΩ
I <sub>CC</sub> Supply current per amplifier		25°C		0.35	0.55	mA
		Full range			0.7	

- (1) Full range is 0°C to 70°C.
- (2) All typical values are at T<sub>A</sub> = 25°C.

## 6.6 Electrical Characteristics: LT1013C, 5 V

 at specified free-air temperature,  $V_{CC+} = 5\text{ V}$ ,  $V_{CC-} = 0$ ,  $V_O = 1.4\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		90	450	$\mu\text{V}$
			Full range			570	
$I_{IO}$	Input offset current		25°C		0.3	2	nA
			Full range			6	
$I_{IB}$	Input bias current		25°C		-18	-50	nA
			Full range			-90	
$V_{ICR}$	Common-mode input voltage range	Recommended range	25°C	0		3.5	V
			Full range	0		3	
$V_{OM}$	Maximum peak output voltage swing	Output low, No load	25°C		15	25	V
			25°C		5	10	
			Full range			13	
			25°C		220	350	
			25°C	4	4.4		
			Full range	3.4	4		
$A_{VD}$	Large-signal differential voltage amplification	$V_O = 5\text{ mV to }4\text{ V}$ , $R_L = 500\ \Omega$	25°C		1		$\text{V}/\mu\text{V}$
			Full range			3.2	
$I_{CC}$	Supply current per amplifier		25°C		0.32	0.5	mA
			Full range			0.55	

(1) Full range is 0°C to 70°C.

 (2) All typical values are at  $T_A = 25^\circ\text{C}$ .

## 6.7 Electrical Characteristics: LT1013D, $\pm 15\text{ V}$

 at specified free-air temperature,  $V_{CC\pm} = \pm 15\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		200	800	$\mu\text{V}$
			Full range			1000	
$\alpha_{VIO}$	Temperature coefficient of input offset voltage		Full range		0.7	5	$\mu\text{V}/^\circ\text{C}$
			Long-term drift of input offset voltage	25°C		0.5	
$I_{IO}$	Input offset current		25°C		0.2	1.5	nA
			Full range			2.8	
$I_{IB}$	Input bias current		25°C		-15	-30	nA
			Full range			-38	
$V_{ICR}$	Common-mode input voltage range	Recommended range	25°C	-15		13.5	V
			Full range	-15		13	
$V_{OM}$	Maximum peak output voltage swing	$R_L = 2\ \text{k}\Omega$	25°C	$\pm 12.5$	$\pm 14$		V
			Full range	$\pm 12$			
$A_{VD}$	Large-signal differential voltage amplification	$V_O = \pm 10\text{ V}$ , $R_L = 600\ \Omega$	25°C	0.5	2		$\text{V}/\mu\text{V}$
			25°C	1.2	7		
			Full range	0.7			
CMRR	Common-mode rejection ratio	$V_{IC} = -15\text{ V to }13.5\text{ V}$	25°C	97	114		dB
			Full range	94			
$k_{SVR}$	Supply-voltage rejection ratio ( $\Delta V_{CC}/\Delta V_{IO}$ )	$V_{CC\pm} = \pm 2\text{ V to } \pm 18\text{ V}$	25°C	100	117		dB
			Full range	97			
	Channel separation	$V_O = \pm 10\text{ V}$ , $R_L = 2\ \text{k}\Omega$	25°C	120	137		dB
$r_{id}$	Differential input resistance		25°C	70	300		$\text{M}\Omega$
$r_{ic}$	Common-mode input resistance		25°C		4		$\text{G}\Omega$
$I_{CC}$	Supply current per amplifier		25°C		0.35	0.55	mA
			Full range			0.6	

(1) Full range is 0°C to 70°C.

 (2) All typical values are at  $T_A = 25^\circ\text{C}$ .

## 6.8 Electrical Characteristics: LT1013D, 5 V

 at specified free-air temperature,  $V_{CC+} = 5\text{ V}$ ,  $V_{CC-} = 0$ ,  $V_O = 1.4\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		250	950	$\mu\text{V}$
			Full range			1200	
$I_{IO}$	Input offset current		25°C		0.3	2	nA
			Full range			6	
$I_{IB}$	Input bias current		25°C		-18	-50	nA
			Full range			-90	
$V_{ICR}$	Common-mode input voltage range	Recommended range	25°C	0		3.5	V
			Full range	0		3	
$V_{OM}$	Maximum peak output voltage swing	Output low, No load	25°C		15	25	V
			25°C		5	10	
			Full range			13	
			25°C		220	350	
			25°C	4	4.4		
			Full range	3.4	4		
$A_{VD}$	Large-signal differential voltage amplification	$V_O = 5\text{ mV to }4\text{ V}$ , $R_L = 500\ \Omega$	25°C		1		$\text{V}/\mu\text{V}$
			Full range				
$I_{CC}$	Supply current per amplifier		25°C		0.32	0.5	mA
			Full range			0.55	

(1) Full range is 0°C to 70°C.

 (2) All typical values are at  $T_A = 25^\circ\text{C}$ .

## 6.9 Electrical Characteristics: LT1013DI, $\pm 15\text{ V}$

 at specified free-air temperature,  $V_{CC\pm} = \pm 15\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		200	800	$\mu\text{V}$
			Full range			1000	
$\alpha_{VIO}$	Temperature coefficient of input offset voltage		Full range		0.7	5	$\mu\text{V}/^\circ\text{C}$
			Long-term drift of input offset voltage	25°C		0.5	
$I_{IO}$	Input offset current		25°C		0.2	1.5	nA
			Full range			2.8	
$I_{IB}$	Input bias current		25°C		-15	-30	nA
			Full range			-38	
$V_{ICR}$	Common-mode input voltage range	Recommended range	25°C	-15		13.5	V
			Full range	-15		13	
$V_{OM}$	Maximum peak output voltage swing	$R_L = 2\ \text{k}\Omega$	25°C	$\pm 12.5$	$\pm 14$		V
			Full range	$\pm 12$			
$A_{VD}$	Large-signal differential voltage amplification	$V_O = \pm 10\text{ V}$ , $R_L = 600\ \Omega$	25°C	0.5	0.2		$\text{V}/\mu\text{V}$
			25°C	1.2	7		
			Full range	0.7			
CMRR	Common-mode rejection ratio	$V_{IC} = -15\text{ V to }13.5\text{ V}$	25°C	97	114		dB
			Full range	94			
$k_{SVR}$	Supply-voltage rejection ratio ( $\Delta V_{CC}/\Delta V_{IO}$ )	$V_{CC+} = \pm 2\text{ V to } \pm 18\text{ V}$	25°C	100	117		dB
			Full range	97			
	Channel separation	$V_O = \pm 10\text{ V}$ , $R_L = 2\ \text{k}\Omega$	25°C	120	137		dB
$r_{id}$	Differential input resistance		25°C	70	300		$\text{M}\Omega$
$r_{ic}$	Common-mode input resistance		25°C		4		$\text{G}\Omega$
$I_{CC}$	Supply current per amplifier		25°C		0.35	0.55	mA
			Full range			0.6	

 (1) Full range is  $-40^\circ\text{C}$  to  $105^\circ\text{C}$ .

 (2) All typical values are at  $T_A = 25^\circ\text{C}$ .

## 6.10 Electrical Characteristics: LT1013DI, 5 V

 at specified free-air temperature,  $V_{CC+} = 5\text{ V}$ ,  $V_{CC-} = 0$ ,  $V_O = 1.4\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		250	950	$\mu\text{V}$
			Full range			1200	
$I_{IO}$	Input offset current		25°C		0.3	2	nA
			Full range			6	
$I_{IB}$	Input bias current		25°C		-18	-50	nA
			Full range			-90	
$V_{ICR}$	Common-mode input voltage range	Recommended range	25°C	0		3.5	V
			Full range	0		3	
$V_{OM}$	Maximum peak output voltage swing	Output low, No load	25°C		15	25	V
			25°C		5	10	
			Full range			13	
			25°C		220	350	
			25°C	4	4.4		
			25°C	3.4	4		
$A_{VD}$	Large-signal differential voltage amplification	$V_O = 5\text{ mV to }4\text{ V}$ , $R_L = 500\ \Omega$	25°C		1		$\text{V}/\mu\text{V}$
			Full range			0.32	
$I_{CC}$	Supply current per amplifier		25°C				mA
			Full range				

 (1) Full range is  $-40^\circ\text{C}$  to  $105^\circ\text{C}$ .

 (2) All typical values are at  $T_A = 25^\circ\text{C}$ .

## 6.11 Electrical Characteristics: LT1013M, $\pm 15\text{ V}$

 at specified free-air temperature,  $V_{CC\pm} = \pm 15\text{ V}$ ,  $V_{IC} = 0$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A^{(1)}$	MIN	TYP <sup>(2)</sup>	MAX	UNIT
$V_{IO}$	Input offset voltage	$R_S = 50\ \Omega$	25°C		60	300	$\mu\text{V}$
			Full range			550	
$\alpha_{VIO}$	Temperature coefficient of input offset voltage		Full range		0.5	2.5 <sup>(3)</sup>	$\mu\text{V}/^\circ\text{C}$
			25°C		0.5

## 7 Detailed Description

### 7.1 Overview

The LT1013x device is a dual operational amplifier with low natural  $V_{IO}$  without programming memory that can be erased. There are no side effects from active  $V_{IO}$  correction used by other op amps. The LT1013x has built-in protection for input voltage below  $V_{CC-}$ . However, an external resistance must be added to protect the LT1013x from input voltage greater than  $V_{CC+}$ .

### 7.2 Functional Block Diagram

Component values are nominal.

Copyright © 2016, Texas Instruments Incorporated

### 7.3 Feature Description

#### 7.3.1 Input Resistors

For voltages less than  $V_{CC-}$ , a pair of 400- $\Omega$  resistors limit input current. These resistors have parasitic diodes to  $V_{CC+}$ . Therefore, external series resistance is needed if input voltage exceed  $V_{CC+}$

#### 7.3.2 Output Stage

High output is provided by Q33 emitter for low output impedance. Q26 provides active current limiting for sourcing current.

Low output is provided by Q34 collector for lower output voltage near  $V_{CC-}$  rail. Q24 provides active current limiting for sinking current.

## Feature Description (continued)

### 7.3.3 Low-Supply Operation

The minimum supply voltage for proper operation of the LT1013x is 3.4 V (three NiCad batteries). Typical supply current at this voltage is 290  $\mu$ A; therefore, power dissipation is only 1 mW per amplifier.

### 7.3.4 Output Phase Reversal Protection

The LT1013x is fully specified for single-supply operation ( $V_{CC-} = 0$ ). The common-mode input voltage range includes ground, and the output swings to within a few millivolts of ground.

Furthermore, the LT1013x has specific circuitry that addresses the difficulties of single-supply operation, both at the input and at the output. At the input, the driving signal can fall below 0 V, either inadvertently or on a transient basis. If the input is more than a few hundred millivolts below ground, the LT1013x is designed to deal with the following two problems that can occur:

1. On many other operational amplifiers, when the input is more than a diode drop below ground, unlimited current flows from the substrate ( $V_{CC-}$  terminal) to the input, which can destroy the unit. On the LT1013x, the 400- $\Omega$  resistors in series with the input protect the device, even when the input is 5 V below ground.
2. When the input is more than 400 mV below ground (at  $T_A = 25^\circ\text{C}$ ), the input stage of similar operational amplifiers saturates, and phase reversal occurs at the output. This can cause lockup in servo systems. Because of unique phase-reversal protection circuitry (Q21, Q22, Q27, and Q28), the LT1013x outputs do not reverse, even when the inputs are at  $-1.5$  V (see [Figure 24](#)).

This phase-reversal protection circuitry does not function when the other operational amplifier on the LT1013x is driven hard into negative saturation at the output. Phase-reversal protection does not work on amplifier 1 when amplifier 2 output is in negative saturation nor on amplifier 2 when amplifier 1 output is in negative saturation.

At the output, other single-supply designs either cannot swing to within 600 mV of ground or cannot sink more than a few micro amperes while swinging to ground. The all-npn output stage of the LT1013x maintains its low output resistance and high-gain characteristics until the output is saturated. In dual-supply operations, the output stage is free of crossover distortion.

**Figure 24. Voltage-Follower Response With Input Exceeding the Negative Common-Mode Input Voltage Range**

## Feature Description (continued)

### 7.3.4.1 Comparator Applications

The single-supply operation of the LT1013x is well suited for use as a precision comparator with TTL-compatible output. In systems using both operational amplifiers and comparators, the LT1013x can perform multiple duties (see Figure 25 and Figure 26).

Figure 25. Low-to-High-Level Output Response for Various Input Overdrives

Figure 26. High-to-Low-Level Output Response for Various Input Overdrives

## 7.4 Device Functional Modes

The LT1013x dual operational amplifier amplifies a differential voltage applied to the inputs.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The LT1013x operational amplifiers are useful in a wide range of signal conditioning applications where high DC accuracy is needed.

### 8.2 Typical Application

A typical application for an operational amplifier is an inverting amplifier. This amplifier takes a positive voltage on the input and makes it a negative voltage of the same magnitude. In the same manner, it also makes negative voltages positive.

Copyright © 2016, Texas Instruments Incorporated

**Figure 27. Application Schematic**

#### 8.2.1 Design Requirements

The supply voltage must be chosen such that it is larger than the input voltage range and output range. For instance, this application scales a signal of  $\pm 0.5$  V to  $\pm 1.8$  V. Setting the supply at  $\pm 12$  V is sufficient to accommodate this application.

#### 8.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier using [Equation 1](#) and [Equation 2](#):

$$A_v = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$A_v = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

Once the desired gain is determined, choose a value for  $R_I$  or  $R_F$ . Choosing a value in the  $k\Omega$  range is desirable because the amplifier circuit will use currents in the milliamp range. This ensures the part does not draw too much current. This example chooses  $10\text{ k}\Omega$  for  $R_I$ , which means  $36\text{ k}\Omega$  is used for  $R_F$ . This was determined by [Equation 3](#).

$$A_v = -\frac{R_F}{R_I} \quad (3)$$

## Typical Application (continued)

### 8.2.3 Application Curve

Figure 28. Input and Output Voltages of the Inverting Amplifier

## 9 Power Supply Recommendations

### CAUTION

Supply voltages larger than 44 V for a single supply, or outside the range of  $\pm 22$  V for a dual supply can permanently damage the device (see [Absolute Maximum Ratings](#)).

Place 0.1- $\mu$ F bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies. For more detailed information on bypass capacitor placement, see [Layout](#).

## 10 Layout

### 10.1 Layout Guidelines

For best operational performance of the device, use quality PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1- $\mu$ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- Run the input traces as far away from the supply or output traces as possible to reduce parasitic coupling. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance, as shown in [Layout Guidelines](#).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

### 11.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 11.4 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 11.5 Trademarks

E2E is a trademark of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 11.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 11.7 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF LT1013, LT1013M :**

- NOTES:
- All linear dimensions are in inches (millimeters).
  - This drawing is subject to change without notice.
  - This package can be hermetically sealed with a metal lid.
  - Falls within JEDEC MS-004

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Falls within JEDEC MS-001 variation BA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
