## **3 Terminal 1A Positive Voltage Regulator**

### **Description**

The SN78xxx series are three-terminal positive regulators providing over 1A output current with internal current limiting, thermal shutdown and safe area protection. These regulators are useful in a wide range of applications. Although they are just fixed voltage regulators, the SN78xxx series can be used with external components to obtain adjustable voltages and Currents.

### **Application**

- ◆ Consumer and personal electronics
- ◆ SMPS post-regulator / dc-to-dc modules
- ◆ High-efficiency linear power supplies

### **Features and Benefits**

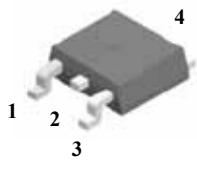

- ◆ Output Current up to 1.0A
- ◆ Output Voltage : 5, 6, 8, 9, 10, 12, 15, 18, 24V
- ◆ Built in OVP, CLP circuit.
- ◆ Built in TSD Protection.
- ◆ Output Transistor Safe Area Protection.
- ◆ Ultra High level of ESD [ Built in ESD Protection Cell ]

MM : 500V / HBM 5KV

◆ Absolute Maximum Ratings ( Ta = 25°C )

Parameter	Symbol	Limits		Unit
		TO-220F-3L	TO-252-3L	
Input Voltage	V <sub>IN</sub>	40.0 ( V <sub>O</sub> =24V )		V
		35.0 ( V <sub>O</sub> =5 to 18V )		
Power Dissipation	P <sub>d</sub>	2.0	1.3	W
Thermal Resistance Junction to Case	R <sub>θJC</sub>	5	5	°C/W
Thermal Resistance Junction to Air	R <sub>θJA</sub>	65	92	°C/W
Junction Temperature	T <sub>J</sub>	150		°C
Operating Junction Temperature Range	T <sub>opr</sub>	-40 ~ +125		°C
Storage Temperature Range	T <sub>stg</sub>	-55 ~ +150		°C

Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its operating ratings. The maximum allowable power dissipation is a function of the maximum junction temperature, T<sub>J(max)</sub>, the junction-to-ambient thermal resistance, θ<sub>JA</sub>, and the ambient temperature, TA.

The maximum allowable power dissipation at any ambient temperature is calculated using:

PD(max) = (T<sub>J(max)</sub> - T<sub>A</sub>) ÷ θ<sub>JA</sub>. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.

## Typical Application

### Fixed Output Regulator

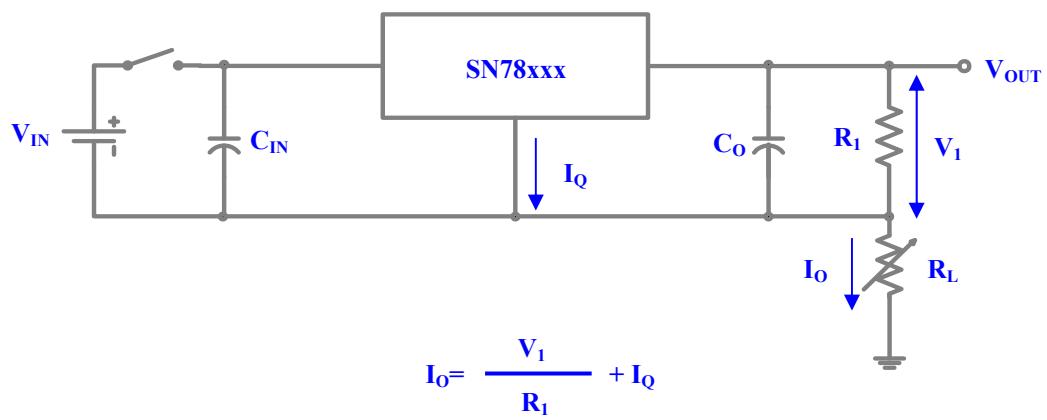

- 1)  $C_{IN}$  should be required if regulators are located far from power supply filter
- 2)  $C_O$  improves output stability and transient response

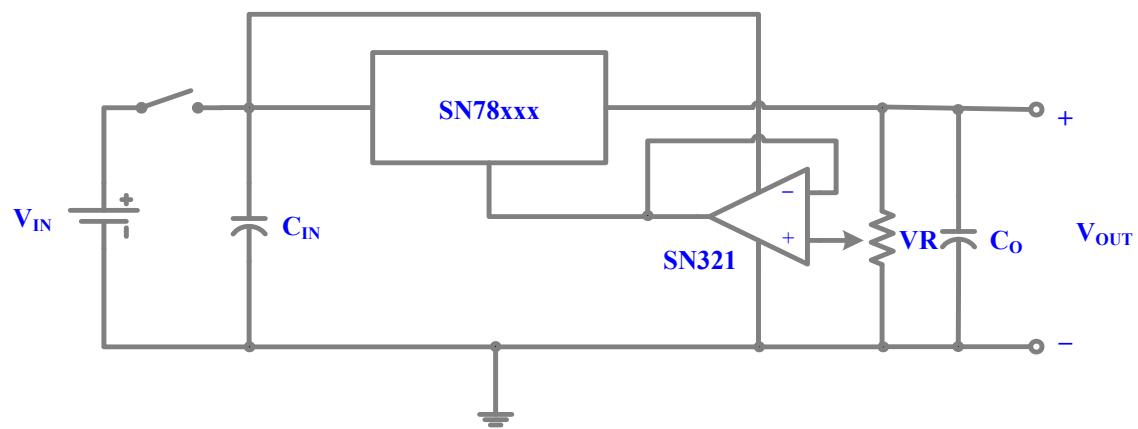

### Load Regulation

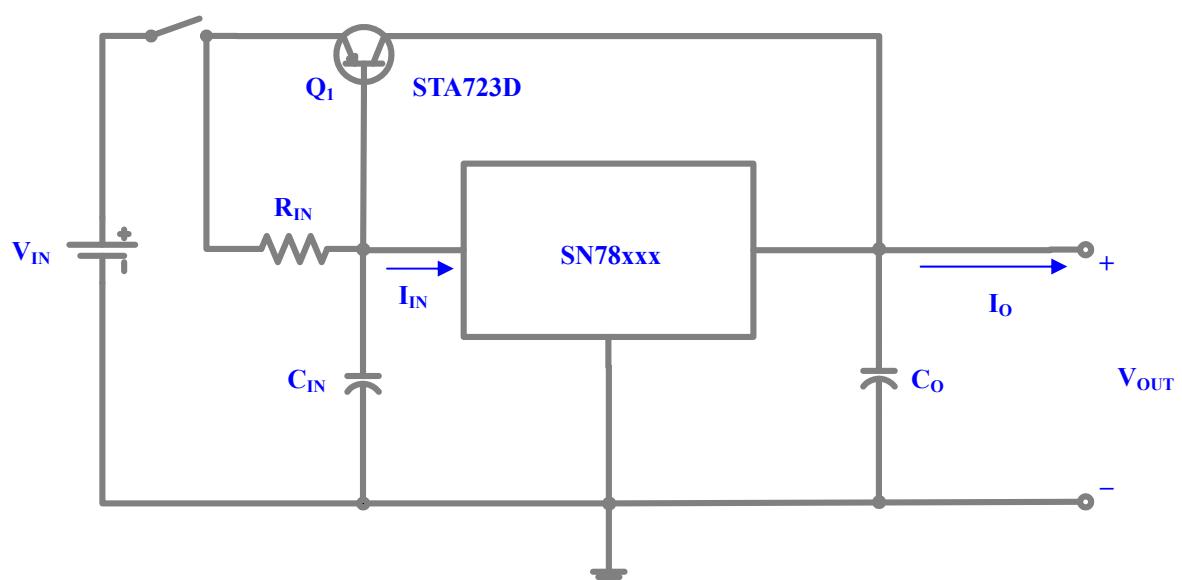

### Constant Current Regulator

### Adjustable Output Regulator

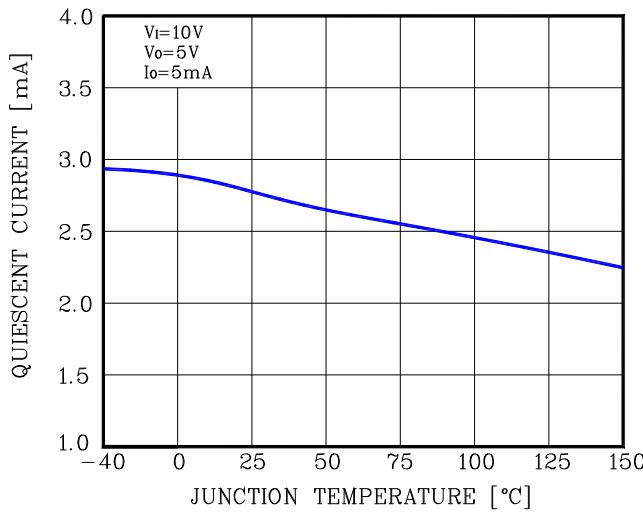

### High Current Voltage Regulator

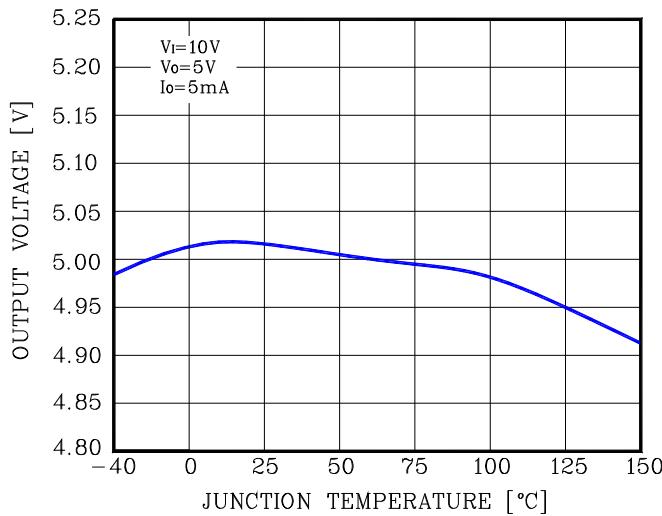

$$I_O = I_{IN} + \beta_{Q1}(I_{IN} - V_{BEQ1} / R_{IN})$$
