

SELXX Series
Transient Voltage Suppressors for ESD Protection

Revision:B

General Description

The SELXX Series is a transient voltage suppressor designed to protect components which are connected to data and transmission lines against ESD. It clamps the voltage just above the logic level supply for positive transients and to a diode drop below ground for negative transients.

Applications

- Ethernet – 10/100 base T
- Cellular Phones
- FireWire
- Audio/Video inputs
- Portable Electronics

Features

- ESD protection >40 kilovolts
- Low clamping voltage
- 500W peak pulse power (8/20μs)
- Ultralow capacitance : 5pF

Complies with the following standards

IEC61000-4-2

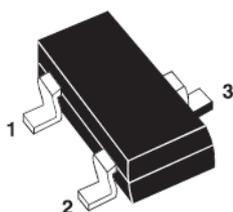

Level 4 15 kV (air discharge)

8 kV (contact discharge)

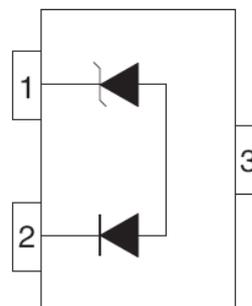

MIL STD 883E - Method 3015-7 Class 3

Application Note

Electrostatic discharge (ESD) is a major cause of failure in electronic systems. Transient Voltage Suppressors (TVS) are an ideal choice for ESD protection. They are capable of clamping the incoming transient to a low enough level such that damage to the protected semiconductor is prevented.

Surface mount TVS offers the best choice for minimal lead inductance. They serve as parallel protection elements, connected between the signal lines to ground. As the transient rises above the operating voltage of the device, the TVS becomes a low impedance path diverting the transient current to ground. The SESOT Series is the ideal board level protection of ESD sensitive semiconductor components.

The tiny SOT-23 package allows design flexibility in the design of high density boards where the space saving is at a premium. This enables to shorten the routing and contributes to hardening against ESD.
