

## LMV76x and LMV762Q-Q1 Low-Voltage, Precision Comparator With Push-Pull Output

### 1 Features

- $V_S = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ , Typical Values Unless Specified
- Input Offset Voltage 0.2 mV
- Input Offset Voltage (Maximum Over Temp) 1 mV
- Input Bias Current 0.2 pA
- Propagation Delay (OD = 50 mV) 120 ns
- Low Supply Current 300  $\mu\text{A}$
- CMRR 100 dB
- PSRR 110 dB
- Extended Temperature Range  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$
- Push-Pull Output
- Ideal for 2.7-V and 5-V Single-Supply Applications
- Available in Space-Saving Packages:
  - 6-Pin SOT-23 (Single With Shutdown)
  - 8-Pin SOIC (Single With Shutdown)
  - 8-Pin SOIC and VSSOP (Dual Without Shutdown)
- LMV762Q-Q1 is Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
  - Device Temperature Grade 1:  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$  Ambient Operating Temperature Range
  - Device HBM ESD Classification Level 1C
  - Device CDM ESD Classification Level M2

### 2 Applications

- Portable and Battery-Powered Systems
- Scanners
- Set-Top Boxes
- High-Speed Differential Line Receiver
- Window Comparators
- Zero-Crossing Detectors
- High-Speed Sampling Circuits
- Automotive

### 3 Description

The LMV76x devices are precision comparators intended for applications requiring low noise and low input offset voltage. The LMV761 single has a shutdown pin that can be used to disable the device and reduce the supply current. The LMV761 is available in a space-saving 6-pin SOT-23 or 8-Pin SOIC package. The LMV762 dual is available in 8-pin SOIC or VSSOP package. The LMV762Q-Q1 is available VSSOP and SOIC packages.

These devices feature a CMOS input and push-pull output stage. The push-pull output stage eliminates the need for an external pullup resistor.

The LMV76x are designed to meet the demands of small size, low power and high performance required by portable and battery-operated electronics.

The input offset voltage has a typical value of 200  $\mu\text{V}$  at room temperature and a 1-mV limit over temperature.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LMV761	SOIC (8)	4.90 mm x 3.91 mm
	SOT-23 (6)	2.90 mm x 1.60 mm
LMV762 LMV762Q-Q1	SOIC (8)	4.90 mm x 3.91 mm
	VSSOP (8)	3.00 mm x 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 See <sup>(1)(2)</sup>

		MIN	MAX	UNIT
Supply voltage (V <sup>+</sup> – V <sup>-</sup> )			5.5	V
Differential input voltage		Supply Voltage		
Voltage between any two pins		Supply Voltage		
Output short circuit duration <sup>(3)</sup>	Current at input pin		±5	mA
Soldering information	Infrared or convection (20 sec.)		235	°C
	Wave soldering (10 sec.) (Lead temp)		260	°C
Junction temperature			150	°C
Storage temperature, T <sub>stg</sub>		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (3) Applies to both single supply and split supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C. Output current in excess of ±25 mA over long term may adversely affect reliability.

## 6.2 ESD Ratings: LMV761, LMV762

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge <sup>(1)</sup>	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(2)</sup>	± 2000
		Machine model	± 200

(1) Unless otherwise specified human body model is 1.5 kΩ in series with 100 pF. Machine model 200 pF.

(2) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

## 6.3 ESD Ratings: LMV762Q-Q1

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 <sup>(1)</sup>	± 2000
		Machine model	± 200

(1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

## 6.4 Recommended Operating Conditions

	MIN	MAX	UNIT
Supply voltage (V <sup>+</sup> – V <sup>-</sup> )	2.7	5.25	V
Temperature range	-40	125	°C

## 6.5 Thermal Information

THERMAL METRIC <sup>(1)</sup>	LMV761	LMV762, LMV762Q-Q1		UNIT
	D (SOIC)	DBV (SOT-23)	DGK (VSSOP)	
	8 PINS	6 PINS	8 PINS	
R <sub>θJA</sub> Junction-to-ambient thermal resistance <sup>(2)</sup>	190	265	235	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

(2) The maximum power dissipation is a function of T<sub>J(MAX)</sub>, θ<sub>JA</sub>, and T<sub>A</sub>. The maximum allowable power dissipation at any ambient temperature is P<sub>D</sub> = (T<sub>J(MAX)</sub> – T<sub>A</sub>) R<sub>θJA</sub>. All numbers apply for packages soldered directly into a PCB.

## 6.6 2.7-V Electrical Characteristics

Unless otherwise specified, all limited ensured for T<sub>J</sub> = 25°C, V<sub>CM</sub> = V<sup>+</sup> / 2, V<sup>+</sup> = 2.7 V, V<sup>-</sup> = 0 V<sup>-</sup>.

PARAMETER	TEST CONDITIONS	MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT
V <sub>OS</sub> Input offset voltage		0.2			mV
	apply at the temperature extremes <sup>(3)</sup>	1			
I <sub>B</sub> Input bias current <sup>(4)</sup>		0.2			pA
I <sub>OS</sub> Input offset current <sup>(4)</sup>		0.001			pA
CMRR Common-mode rejection ratio	0 V < V <sub>CM</sub> < V <sub>CC</sub> – 1.3 V	80	100		dB
PSRR Power supply rejection ratio	V <sup>+</sup> = 2.7 V to 5 V	80	110		dB
CMVR Input common-mode voltage range	CMRR > 50 dB	apply at the temperature extremes <sup>(3)</sup>		1.5	V
V <sub>O</sub> Output swing	Output swing high	V <sup>+</sup> – 0.35 V <sup>+</sup> – 0.1			V
	Output swing low	90			250
I <sub>SC</sub> Output short circuit current <sup>(5)</sup>	Sourcing, V <sub>O</sub> = 1.35 V, V <sub>ID</sub> = 200 mV	6	20		mA
	Sinking, V <sub>O</sub> = 1.35 V, V <sub>ID</sub> = –200 mV	6	15		

(1) All limits are specified by testing or statistical analysis.

(2) Typical values represent the most likely parametric norm.

(3) Maximum temperature ensured range is –40°C to +125°C.

(4) Specified by design.

(5) Electrical Table values apply only for factory testing conditions at the temperature indicated. Factory testing conditions result in very limited self-heating of the device such that T<sub>J</sub> = T<sub>A</sub>. No ensured specification of parametric performance is indicated in the electrical tables under conditions of internal self-heating where T<sub>J</sub> > T<sub>A</sub>. See [Recommended Operating Conditions](#) for information on temperature de-rating of this device. Absolute Maximum Rating indicate junction temperature limits beyond which the device may be permanently degraded, either mechanically or electrically.

## 2.7-V Electrical Characteristics (continued)

Unless otherwise specified, all limited ensured for  $T_J = 25^\circ\text{C}$ ,  $V_{CM} = V^+ / 2$ ,  $V^+ = 2.7\text{ V}$ ,  $V^- = 0\text{ V}$ .

PARAMETER		TEST CONDITIONS	MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT
$I_S$	Supply current LMV761 (single comparator)			275	700	$\mu\text{A}$
	LMV762, LMV762Q-Q1 (both comparators)			550		$\mu\text{A}$
		apply at the temperature extremes <sup>(3)</sup>			1400	$\mu\text{A}$
$I_{OUT\ LEAKAGE}$	Output leakage I at shutdown	$\overline{SD} = \text{GND}$ , $V_O = 2.7\text{ V}$		0.2		$\mu\text{A}$
$I_S\ LEAKAGE$	Supply leakage I at shutdown	$\overline{SD} = \text{GND}$ , $V_{CC} = 2.7\text{ V}$		0.2	2	$\mu\text{A}$

## 6.7 5-V Electrical Characteristics

Unless otherwise specified, all limited ensured for  $T_J = 25^\circ\text{C}$ ,  $V_{CM} = V^+ / 2$ ,  $V^+ = 5\text{ V}$ ,  $V^- = 0\text{ V}$ .

PARAMETER		TEST CONDITIONS	MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT
$V_{OS}$	Input offset voltage			0.2		mV
		apply at the temperature extremes <sup>(3)</sup>			1	
$I_B$	Input bias current <sup>(4)</sup>			0.2	50	pA
$I_{OS}$	Input offset current <sup>(4)</sup>			0.01	5	pA
CMRR	Common-mode rejection ratio	$0\text{ V} < V_{CM} < V_{CC} - 1.3\text{ V}$	80	100		dB
PSRR	Power supply rejection ratio	$V^+ = 2.7\text{ V}$ to $5\text{ V}$	80	110		dB
CMVR	Input common-mode voltage range	CMRR > 50 dB	apply at the temperature extremes <sup>(3)</sup>		3.8	V
$V_O$	Output swing high	$I_L = 4\text{ mA}$ , $V_{ID} = 200\text{ mV}$	$V^+ - 0.35$	$V^+ - 0.1$		V
	Output swing low	$I_L = -4\text{ mA}$ , $V_{ID} = -200\text{ mV}$		120	250	mV
$I_{SC}$	Output short circuit current <sup>(5)</sup>	Sourcing, $V_O = 2.5\text{ V}$ , $V_{ID} = 200\text{ mV}$	6	60		mA
		Sinking, $V_O = 2.5\text{ V}$ , $V_{ID} = -200\text{ mV}$	6	40		
$I_S$	Supply current LMV761 (single comparator)			225	700	$\mu\text{A}$
	LMV762, LMV762Q-Q1 (both comparators)			450		$\mu\text{A}$
		apply at the temperature extremes <sup>(3)</sup>			1400	$\mu\text{A}$
$I_{OUT\ LEAKAGE}$	Output leakage I at shutdown	$\overline{SD} = \text{GND}$ , $V_O = 5\text{ V}$		0.2		$\mu\text{A}$
$I_S\ LEAKAGE$	Supply leakage I at shutdown	$\overline{SD} = \text{GND}$ , $V_{CC} = 5\text{ V}$		0.2	2	$\mu\text{A}$

(1) All limits are specified by testing or statistical analysis.

(2) Typical values represent the most likely parametric norm.

(3) Maximum temperature ensured range is  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$ .

(4) Specified by design.

(5) Electrical Table values apply only for factory testing conditions at the temperature indicated. Factory testing conditions result in very limited self-heating of the device such that  $T_J = T_A$ . No ensured specification of parametric performance is indicated in the electrical tables under conditions of internal self-heating where  $T_J > T_A$ . See [Recommended Operating Conditions](#) for information on temperature de-rating of this device. Absolute Maximum Rating indicate junction temperature limits beyond which the device may be permanently degraded, either mechanically or electrically.

## 6.8 2-V Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PD}$	Propagation delay $R_L = 5.1\text{ k}\Omega$ $C_L = 50\text{ pF}$	Overdrive = 5 mV		270		ns
		Overdrive = 10 mV		205		
		Overdrive = 50 mV		120		
$t_{SKEW}$	Propagation delay skew			5		ns
$t_r$	Output rise time	10% to 90%		1.7		ns
$t_f$	Output fall time	90% to 10%		1.8		ns
$t_{on}$	Turnon time from shutdown			6		$\mu\text{s}$

## 6.9 5-V Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PD}$	Propagation delay $R_L = 5.1\text{ k}\Omega$ $C_L = 50\text{ pF}$	Overdrive = 5 mV		225		ns
		Overdrive = 10 mV		190		
		Overdrive = 50 mV		120		
$t_{SKEW}$	Propagation delay skew			5		ns
$t_r$	Output rise time	10% to 90%		1.7		ns
$t_f$	Output fall time	90% to 10%		1.5		ns
$t_{on}$	Turnon time from shutdown			4		$\mu\text{s}$

## 7 Detailed Description

### 7.1 Overview

The LMV76x family of precision comparators is available in a variety of packages and is ideal for portable and battery-operated electronics.

To minimize external components, the LMV76x family features a push-pull output stage where the output levels are power-supply determined. In addition, the LMV761 (single) features an active-low shutdown pin that can be used to disable the device and reduce the supply current.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Basic Comparator

A basic comparator circuit is used to convert analog input signals to digital output signals. The comparator compares an input voltage ( $V_{IN}$ ) at the noninverting input to the reference voltage ( $V_{REF}$ ) at the inverting pin. If  $V_{IN}$  is less than  $V_{REF}$  the output ( $V_O$ ) is low ( $V_{OL}$ ). However, if  $V_{IN}$  is greater than  $V_{REF}$ , the output voltage ( $V_O$ ) is high ( $V_{OH}$ ).

**Figure 19. Basic Comparator Without Hysteresis**

**Figure 20. Basic Comparator**

#### 7.3.2 Hysteresis

The basic comparator configuration may oscillate or produce a noisy output if the applied differential input is near the input offset voltage of the comparator, which tends to occur when the voltage on one input is equal or very close to the other input voltage. Adding hysteresis can prevent this problem. Hysteresis creates two switching thresholds (one for the rising input voltage and the other for the falling input voltage). Hysteresis is the voltage difference between the two switching thresholds. When both inputs are nearly equal, hysteresis causes one input to effectively move quickly past the other. Thus, moving the input out of the region in which oscillation may occur.

## Feature Description (continued)

Hysteresis can easily be added to a comparator in a noninverting configuration with two resistors and positive feedback [Figure 22](#). The output will switch from low to high when  $V_{IN}$  rises up to  $V_{IN1}$ , where  $V_{IN1}$  is calculated by [Equation 1](#):

$$V_{IN1} = [V_{REF}(R_1 + R_2)] / R_2 \quad (1)$$

The output will switch from high to low when  $V_{IN}$  falls to  $V_{IN2}$ , where  $V_{IN2}$  is calculated by [Equation 2](#):

$$V_{IN2} = [V_{REF}(R_1 + R_2) - (V_{CC} R_1)] / R_2 \quad (2)$$

The Hysteresis is the difference between  $V_{IN1}$  and  $V_{IN2}$ , as calculated by [Equation 3](#):

$$\Delta V_{IN} = V_{IN1} - V_{IN2} = [V_{REF}(R_1 + R_2) / R_2] - [V_{REF}(R_1 + R_2) - (V_{CC} R_1) / R_2] = V_{CC} R_1 / R_2 \quad (3)$$

**Figure 21. Basic Comparator With Hysteresis**

**Figure 22. Noninverting Comparator Configuration**

### 7.3.3 Input

The LMV76x devices have near-zero input bias current, which allows very high resistance circuits to be used without any concern for matching input resistances. This near-zero input bias also allows the use of very small capacitors in R-C type timing circuits. This reduces the cost of the capacitors and amount of board space used.

## 7.4 Device Functional Modes

### 7.4.1 Shutdown Mode

The LMV761 features a low-power shutdown pin that is activated by driving  $\overline{SD}$  low. In shutdown mode, the output is in a high-impedance state, supply current is reduced to 20 nA and the comparator is disabled. Driving  $\overline{SD}$  high will turn the comparator on. The  $\overline{SD}$  pin must not be left unconnected due to the fact that it is a high-impedance input. When left unconnected, the output will be at an unknown voltage. Do **not** three-state the  $\overline{SD}$  pin.

The maximum input voltage for  $\overline{SD}$  is 5.5 V referred to ground and is not limited by  $V_{CC}$ . This allows the use of 5-V logic to drive  $\overline{SD}$  while  $V_{CC}$  operates at a lower voltage, such as 3 V. The logic threshold limits for  $\overline{SD}$  are proportional to  $V_{CC}$ .

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The LMV76x are single-supply comparators with 120 ns of propagation delay and 300  $\mu$ A of supply current.

### 8.2 Typical Application

A typical application for a LMV76x comparator is a programmable square-wave oscillator.

Figure 23. Square-Wave Oscillator

#### 8.2.1 Design Requirements

The circuit in Figure 23 generates a square wave whose period is set by the RC time constant of the capacitor  $C_1$  and resistor  $R_4$ .  $V^+ = 5$  V unless otherwise specified.

#### 8.2.2 Detailed Design Procedure

The maximum frequency is limited by the large signal propagation delay of the comparator and by the capacitive loading at the output, which limits the output slew rate.

Figure 24. Square-Wave Oscillator Timing Thresholds

### Typical Application (continued)

Consider the output of Figure 23 is high to analyze the circuit. That implies that the inverted input ( $V_C$ ) is lower than the noninverting input ( $V_A$ ). This causes the  $C_1$  to be charged through  $R_4$ , and the voltage  $V_C$  increases until it is equal to the noninverting input. The value of  $V_A$  at this point is calculated by Equation 4:

$$V_{A1} = \frac{V_{CC} \cdot R_2}{R_2 + R_1 \parallel R_3} \quad (4)$$

If  $R_1 = R_2 = R_3$ , then  $V_{A1} = 2 V_{CC} / 3$

At this point the comparator switches pulling down the output to the negative rail. The value of  $V_A$  at this point is calculated by Equation 5:

$$V_{A2} = \frac{V_{CC}(R_2 \parallel R_3)}{R_1 + (R_2 \parallel R_3)} \quad (5)$$

If  $R_1 = R_2 = R_3$ , then  $V_{A2} = V_{CC} / 3$ .

The capacitor  $C_1$  now discharges through  $R_4$ , and the voltage  $V_C$  decreases until it is equal to  $V_{A2}$ , at which point the comparator switches again, bringing it back to the initial stage. The time period is equal to twice the time it takes to discharge  $C_1$  from  $2 V_{CC} / 3$  to  $V_{CC} / 3$ , which is given by  $R_4 C_1 \times \ln 2$ . Hence, the formula for the frequency is calculated by Equation 6:

$$F = 1 / (2 \times R_4 \times C_1 \times \ln 2) \quad (6)$$

### 8.2.3 Application Curve

Figure 25 shows the simulated results of an oscillator using the following values:

- $R_1 = R_2 = R_3 = R_4 = 100 \text{ k}\Omega$
- $C_1 = 100 \text{ pF}$ ,  $C_L = 20 \text{ pF}$
- $V_+ = 5 \text{ V}$ ,  $V_- = \text{GND}$
- $C_{\text{STRAY}}$  (not shown) from  $V_a$  to GND =  $10 \text{ pF}$

**Figure 25. Square-Wave Oscillator Output Waveform**

## 9 Power Supply Recommendations

To minimize supply noise, power supplies must be decoupled by a 0.1- $\mu\text{F}$  ceramic capacitor in parallel with a 10- $\mu\text{F}$  capacitor.

Due to the nanosecond edges on the output transition, peak supply currents will be drawn during output transitions. Peak current depends on the capacitive loading on the output. The output transition can cause transients on poorly bypassed power supplies. These transients can cause a poorly bypassed power supply to *ring* due to trace inductance and low self-resonance frequency of high ESR bypass capacitors.

Treat the LMV6x as a high-speed device. Keep the ground paths short and place small (low-ESR ceramic) bypass capacitors directly between the  $V^+$  and  $V^-$  pins.

Output capacitive loading and output toggle rate will cause the average supply current to rise over the quiescent current.

## 10 Layout

### 10.1 Layout Guidelines

The LMV76x is designed to be stable and oscillation free, but it is still important to include the proper bypass capacitors and ground pick-ups. Ceramic 0.1- $\mu\text{F}$  capacitors must be placed at both supplies to provide clean switching. Minimize the length of signal traces to reduce stray capacitance.

### 10.2 Layout Example

Figure 26. Comparator With Hysteresis

### 11.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](http://e2e.ti.com), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 11.3 Trademarks

E2E is a trademark of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 11.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 11.5 Glossary

**SLYZ022** — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

# DBV0006A

# PACKAGE OUTLINE

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

4214840/B 03/2018

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
4. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
5. Reference JEDEC MO-178.

# EXAMPLE BOARD LAYOUT

DBV0006A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:15X

SOLDER MASK DETAILS

4214840/B 03/2018

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBV0006A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE:15X

4214840/B 03/2018

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

D0008A

# PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

### NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed  $.006$  [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

# EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE  
BASED ON .005 INCH [0.125 MM] THICK STENCIL  
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

DGK (S-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
  - E. Falls within JEDEC MO-187 variation AA, except interlead flash.

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
