

FEATURES

- **±1% and 2% Initial Tolerance**
- **Operating Current of 10 μ A to 20mA**
- **1Ω Dynamic Impedance**
- **Low Temperature Coefficient**
- **Low Voltage Reference—1.235V**
- **2.5V Device and Adjustable Device Also Available**
- **285-1.2 Series and 285 Series, respectively**

DESCRIPTION

The 285-1.2/385-1.2 are micropower 2-terminal band-gap voltage regulator diodes.

Operating over a 10 μ A to 20mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance.

Since the 285-1.2 band-gap reference uses only transistors and resistors, low noise and good long term stability result.

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional. For specifications and test conditions, see the Electrical Characteristics. The specifications apply only for the test conditions listed.
- (2) Refer to RETS185H-1.2 for military specifications.
- (3) If Military/Aerospace specified devices are required, please contact the TI Sales Office/Distributors for availability and specifications.
- (4) For elevated temperature operation, see [Table 1](#).
- (5) The human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin.

(1) Parameters identified with boldface type apply at temperature extremes. All other numbers apply at T_A = T_J = 25°C.

(2) Production tested.

(3) A military RETS electrical specification is available on request.

(4) Specified by design. Not production tested. These limits are not used to calculate average outgoing quality levels.

(5) The average temperature coefficient is defined as the maximum deviation of reference voltage at all measured temperatures between the operating T_{MAX} and T_{MIN}, divided by T_{MAX} - T_{MIN}. The measured temperatures are -55°C, -40°C, 0°C, 25°C, 70°C, 85°C, 125°C.**THERMAL CHARACTERISTICS**
