## Description

BGS14WMA9 is a Single Pole Four Throw (SP4T) diversity switch which is specifically designed for WLAN and Bluetooth applications in a very compact 9 pin package with very small size of only $1.1 \times 1.1 \mathrm{~mm}^{2}$ and thickness of 0.55 mm .
Any of the 4 ports can be used as termination of the diversity antenna handling up to 26 dBm .
Unlike GaAs technology, external DC blocking capacitors at the RF ports are only required if DC voltage is applied externally. BGS14WMA9 RF switch is manufactured in Infineon's patented MOS technology, offering the performance of GaAs with the economy and integration of conventional CMOS including the inherently higher ESD robustness.

${ }^{1)}$ Switch has a low-pass response. For higher frequencies, losses have to be considered for their impact on thermal heating. The $D C$ voltage at RF ports $V_{\text {RFDC }}$ has to be 0 V .
${ }^{2)}$ Note: Consider potential ripple voltages on top of $V_{10}$. Including RF ripple, $V_{10}$ must not exceed the maximum ratings: $V_{10}=V_{\mathrm{DC}}+V_{\text {Ripple }}$.
${ }^{3)}$ Field-Induced Charged-Device Model ANSI/ESDA/JEDEC JS-002. Simulates charging/discharging events that occur in production equipment and processes. Potential for CDM ESD events occurs whenever there is metal-to-metal contact in manufacturing.
${ }^{4)}$ Human Body Model ANSI/ESDA/JEDEC JS-001 ( $R=1.5 \mathrm{k} \Omega, C=100 \mathrm{pF}$ ).
${ }^{5)}$ IEC 61000-4-2 $(R=330 \Omega, C=150 \mathrm{pF})$, contact discharge.

Warning: Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.
