

Fail-Safe, High-Speed (10Mbps), Slew-Rate-Limited RS-485/RS-422 Transceivers

General Description

The MAX3080-MAX3089 high-speed transceivers for RS-485/RS-422 communication contain one driver and one receiver. These devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. This means that the receiver output will be a logic high if all transmitters on a terminated bus are disabled (high impedance). The MAX3080/MAX3081/MAX3082 feature reduced slew-rate drivers that minimize EMI and reduce reflections caused by improperly terminated cables, allowing error-free data transmission up to 115kbps. The MAX3083/MAX3084/MAX3085 offer higher driver output slew-rate limits, allowing transmit speeds up to 500kbps. The MAX3086/MAX3087/MAX3088's driver slew rates are not limited, making transmit speeds up to 10Mbps possible. The MAX3089's slew rate is selectable between 115kbps, 500kbps, and 10Mbps by driving a selector pin with a single three-state driver.

These transceivers typically draw 375 μ A of supply current when unloaded, or when fully loaded with the drivers disabled.

All devices have a 1/8-unit-load receiver input impedance that allows up to 256 transceivers on the bus. The MAX3082/MAX3085/MAX3088 are intended for half-duplex communications, while the MAX3080/MAX3081/MAX3083/MAX3084/MAX3086/MAX3087 are intended for full-duplex communications. The MAX3089 is selectable between half-duplex and full-duplex operation. It also features independently programmable receiver and transmitter output phase via separate pins.

Features

- ♦ **True Fail-Safe Receiver While Maintaining EIA/TIA-485 Compatibility**
- ♦ **Enhanced Slew-Rate Limiting Facilitates Error-Free Data Transmission (MAX3080-MAX3085/MAX3089)**
- ♦ **1nA Low-Current Shutdown Mode (except MAX3081/MAX3084/MAX3087)**
- ♦ **Pin-Selectable Full/Half-Duplex Operation (MAX3089)**
- ♦ **Phase Controls to Correct for Twisted-Pair Reversal (MAX3089)**
- ♦ **Allow Up to 256 Transceivers on the Bus**

Applications

RS-422/RS-485 Communications
Level Translators
Transceivers for EMI-Sensitive Applications
Industrial-Control Local Area Networks

Ordering Information

| PART | TEMP. RANGE | PIN-PACKAGE |
|--------------------|----------------|----------------|
| MAX3080 CPD | 0°C to +70°C | 14 Plastic DIP |
| MAX3080CSD | 0°C to +70°C | 14 SO |
| MAX3080EPD | -40°C to +85°C | 14 Plastic DIP |
| MAX3080ESD | -40°C to +85°C | 14 SO |

Selection Table

| Part | Half/Full Duplex | Data Rate (Mbps) | Slew Rate Limited | Low-Power Shutdown | Receiver/Driver Enable | Quiescent Current (μ A) | Transceivers On Bus | Pin Count | Industry-Standard Pinout |
|----------------|------------------|------------------|-------------------|--------------------|------------------------|------------------------------|---------------------|-----------|--------------------------|
| MAX3080 | Full | 0.115 | Yes | Yes | Yes | 375 | 256 | 14 | 75180 |
| MAX3081 | Full | 0.115 | Yes | No | No | 375 | 256 | 8 | 75179 |
| MAX3082 | Half | 0.115 | Yes | Yes | Yes | 375 | 256 | 8 | 75176 |
| MAX3083 | Full | 0.5 | Yes | Yes | Yes | 375 | 256 | 14 | 75180 |
| MAX3084 | Full | 0.5 | Yes | No | No | 375 | 256 | 8 | 75179 |
| MAX3085 | Half | 0.5 | Yes | Yes | Yes | 375 | 256 | 8 | 75176 |
| MAX3086 | Full | 10 | No | Yes | Yes | 375 | 256 | 14 | 75180 |
| MAX3087 | Full | 10 | No | No | No | 375 | 256 | 8 | 75179 |
| MAX3088 | Half | 10 | No | Yes | Yes | 375 | 256 | 8 | 75176 |
| MAX3089 | Selectable | Selectable | Selectable | Yes | Yes | 375 | 256 | 14 | 75180* |

*Pin-compatible with 75180, with additional features implemented using pins 1, 6, 8, and 13.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{CC}) +7V
 Control Input Voltage (\overline{RE} , DE) -0.3V to ($V_{CC} + 0.3V$)
 Special Input Voltage
 (H/\overline{F} , SRL, TXP, RXP) -0.3V to ($V_{CC} + 0.3V$)
 Driver Input Voltage (DI) -0.3V to ($V_{CC} + 0.3V$)
 Driver Output Voltage (A, B, Y, Z) $\pm 13V$
 Receiver Input Voltage (A, B) $\pm 13V$
 Receiver Input Voltage, Full Duplex (A, B) $\pm 25V$
 Receiver Output Voltage (RO) -0.3V to ($V_{CC} + 0.3V$)

Continuous Power Dissipation
 8-Pin Plastic DIP (derate 9.09mW/°C above +70°C) ... 727mW
 8-Pin SO (derate 5.88mW/°C above +70°C) 471mW
 14-Pin Plastic DIP (derate 10.0mW/°C above +70°C) ... 800mW
 14-Pin SO (derate 8.33mW/°C above +70°C) 667mW
 Operating Temperature Ranges
 MAX308_C_ 0°C to +70°C
 MAX308_E_ -40°C to +85°C
 Storage Temperature Range -65°C to +150°C
 Lead Temperature (soldering, 10sec) +300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

DC ELECTRICAL CHARACTERISTICS

($V_{CC} = +5V \pm 5\%$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $V_{CC} = +5V$ and $T_A = +25^\circ C$.) (Note 1)

| PARAMETER | SYMBOL | CONDITIONS | MIN | TYP | MAX | UNITS |
|---|-----------------|---|----------------|---------|--------------|---------|
| DRIVER | | | | | | |

| | | $0V \leq V_{OUT} \leq 12V$ | | 250 | | |
| | | $0V \leq V_{OUT} \leq V_{CC}$ | ± 25 | | | |

DC ELECTRICAL CHARACTERISTICS (continued)

($V_{CC} = +5V \pm 5\%$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $V_{CC} = +5V$ and $T_A = +25^\circ C$.) (Note 1)

| PARAMETER | SYMBOL | CONDITIONS | MIN | TYP | MAX | UNITS |
|---|-----------------|--|----------------|-------|----------|-----------|
| RECEIVER | | | | | | |
| Receiver Differential Threshold Voltage | V_{TH} | $-7V \leq V_{CM} \leq 12V$ | -200 | -125 | -50 | mV |
| Receiver Input Hysteresis | ΔV_{TH} | | | 25 | | mV |
| Receiver Output High Voltage | V_{OH} | $I_O = -4mA$, $V_{ID} = -50mV$ | $V_{CC} - 1.5$ | | | V |
| Receiver Output Low Voltage | V_{OL} | $I_O = 4mA$, $V_{ID} = -200mV$ | | | 0.4 | V |
| Three-State Output Current at Receiver | I_{OZR} | $0.4V \leq V_O \leq 2.4V$ | | | ± 1 | μA |
| Receiver Input Resistance | R_{IN} | $-7V \leq V_{CM} \leq 12V$ | 96 | | | $k\Omega$ |
| Receiver Output Short-Circuit Current | I_{OSR} | $0V \leq V_{RO} \leq V_{CC}$ | ± 7 | | ± 95 | mA |
| SUPPLY CURRENT | | | | | | |
| Supply Current | I_{CC} | No load, $\overline{RE} = DI = GND$ or V_{CC} , $SRL = V_{CC}$ | $DE = V_{CC}$ | 430 | 900 | μA |
| | | | $DE = GND$ | 375 | 600 | |
| | | No load, $\overline{RE} = DI = GND$ or V_{CC} , $SRL = GND$ | $DE = V_{CC}$ | 475 | 1000 | μA |
| | | | $DE = GND$ | 420 | 800 | |
| Supply Current in Shutdown Mode | I_{SHDN} | $DE = GND$, $\overline{VRE} = V_{CC}$ | | 0.001 | 10 | μA |

Note 1: All currents into the device are positive; all currents out of the device are negative. All voltages are referred to device ground unless otherwise noted.

Note 2: ΔV_{OD} and ΔV_{OC} are the changes in V_{OD} and V_{OC} , respectively, when the DI input changes state.

Note 3: The SRL pin is internally biased to $V_{CC} / 2$ by a $100k\Omega/100k\Omega$ resistor divider. It is guaranteed to be $V_{CC} / 2$ if left unconnected.

Note 4: Maximum current level applies to peak current just prior to foldback-current limiting; minimum current level applies during current limiting.

SWITCHING CHARACTERISTICS—MAX3080–MAX3082, and MAX3089 with SRL = Unconnected

($V_{CC} = +5V \pm 5\%$, $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $V_{CC} = +5V$ and $T_A = +25^\circ C$.)

Note 5: The device is put into shutdown by bringing \overline{RE} high and DE low. If the enable inputs are in this state for less than 50ns, the device is guaranteed not to enter shutdown. If the enable inputs are in this state for at least 600ns, the device is guaranteed to have entered shutdown.

Typical Operating Characteristics

($V_{CC} = +5V$, $T_A = +25^\circ C$, unless otherwise noted.)

Typical Operating Characteristics (continued)

(V_{CC} = +5V, T_A = +25°C, unless otherwise noted.)

Typical Operating Characteristics (continued)

($V_{CC} = +5V$, $T_A = +25^\circ C$, unless otherwise noted.)

Pin Description

| PIN | | | | | NAME | FUNCTION |
|-------------------------------|-------------------------------|-------------------------------|-------------------------|-------------------------|-------------------|--|
| MAX3080 MAX3083 MAX3086 | MAX3081 MAX3084 MAX3087 | MAX3082 MAX3085 MAX3088 | MAX3089 | | | |
| FULL-DUPLEX DEVICES | | HALF- DUPLEX DEVICES | FULL- DUPLEX MODE | HALF- DUPLEX MODE | | |
| — | — | — | 1 | 1 | H/ \overline{F} | Half/Full-Duplex Selector Pin. Connect H/ \overline{F} to V _{CC} for half-duplex mode; connect to GND or leave unconnected for full-duplex mode. |
| 2 | 2 | 1 | 2 | 2 | RO | Receiver Output. When \overline{RE} is low and if A - B ≥ -50mV, RO will be high; if A - B ≤ -200mV, RO will be low. |
| 3 | — | 2 | 3 | 3 | \overline{RE} | Receiver Output Enable. Drive \overline{RE} low to enable RO; RO is high impedance when \overline{RE} is high. Drive \overline{RE} high and DE low to enter low-power shutdown mode. |
| 4 | — | 3 | 4 | 4 | DE | Driver Output Enable. Drive DE high to enable driver outputs. These outputs are high impedance when DE is low. Drive \overline{RE} high and DE low to enter low-power shutdown mode. |
| 5 | 3 | 4 | 5 | 5 | DI | Driver Input. With DE high, a low on DI forces noninverting output low and inverting output high. Similarly, a high on DI forces non-inverting output high and inverting output low. |
| — | — | — | 6 | 6 | SRL | Slew-Rate-Limit Selector Pin. Connect SRL to GND for 10Mbps communication rate; connect to V _{CC} for 500kbps communication rate. Leave unconnected for 115kbps communication rate. |
| 6, 7 | 4 | 5 | 7 | 7 | GND | Ground |
| — | — | — | 8 | 8 | TXP | Transmitter Phase. Connect TXP to GND, or leave floating for normal transmitter phase/polarity. Connect to V _{CC} to invert the transmitter phase/polarity. |
| 9 | 5 | — | 9 | — | Y | Noninverting Driver Output |
| — | — | — | — | 9 | Y | Noninverting Receiver Input and Noninverting Driver Output* |
| 10 | 6 | — | 10 | — | Z | Inverting Driver Output |
| — | — | — | — | 10 | Z | Inverting Receiver Input and Inverting Driver Output* |
| 11 | 7 | — | 11 | — | B | Inverting Receiver Input |
| — | — | — | — | 11 | B | Receiver Input Resistors* |
| — | — | 7 | — | — | B | Inverting Receiver Input and Inverting Driver Output |

Detailed Description

The MAX3080–MAX3089 high-speed transceivers for RS-485/RS-422 communication contain one driver and one receiver. These devices feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted, or when they are connected to a terminated transmission line with all drivers disabled (see *Fail-Safe* section). The MAX3080/MAX3081/MAX3082 feature reduced slew-rate drivers that minimize EMI and reduce reflections caused by improperly terminated cables, allowing error-free data transmission up to 115kbps (see *Reduced EMI and Reflections* section). The MAX3083/MAX3084/MAX3085 offer higher driver output slew-rate limits, allowing transmit speeds up to 500kbps. The MAX3086/MAX3087/MAX3088's driver slew rates are not limited, making transmit speeds up to 10Mbps possible. The MAX3089's slew rate is selectable between 115kbps, 500kbps, and 10Mbps by driving a selector pin with a three-state driver.

The MAX3082/MAX3085/MAX3088 are half-duplex transceivers, while the MAX3080/MAX3081/MAX3083/MAX3084/MAX3086/MAX3087 are full-duplex transceivers. The MAX3089 is selectable between half- and full-duplex communication by driving a selector pin high or low, respectively.

All of these parts operate from a single +5V supply. Drivers are output short-circuit current limited. Thermal shutdown circuitry protects drivers against excessive power dissipation. When activated, the thermal shutdown circuitry places the driver outputs into a high-impedance state.

Receiver Input Filtering

The receivers of the MAX3080–MAX3085, and the MAX3089 when operating in 115kbps or 500kbps mode, incorporate input filtering in addition to input hysteresis. This filtering enhances noise immunity with differential signals that have very slow rise and fall times. Receiver propagation delay increases by 20% due to this filtering.

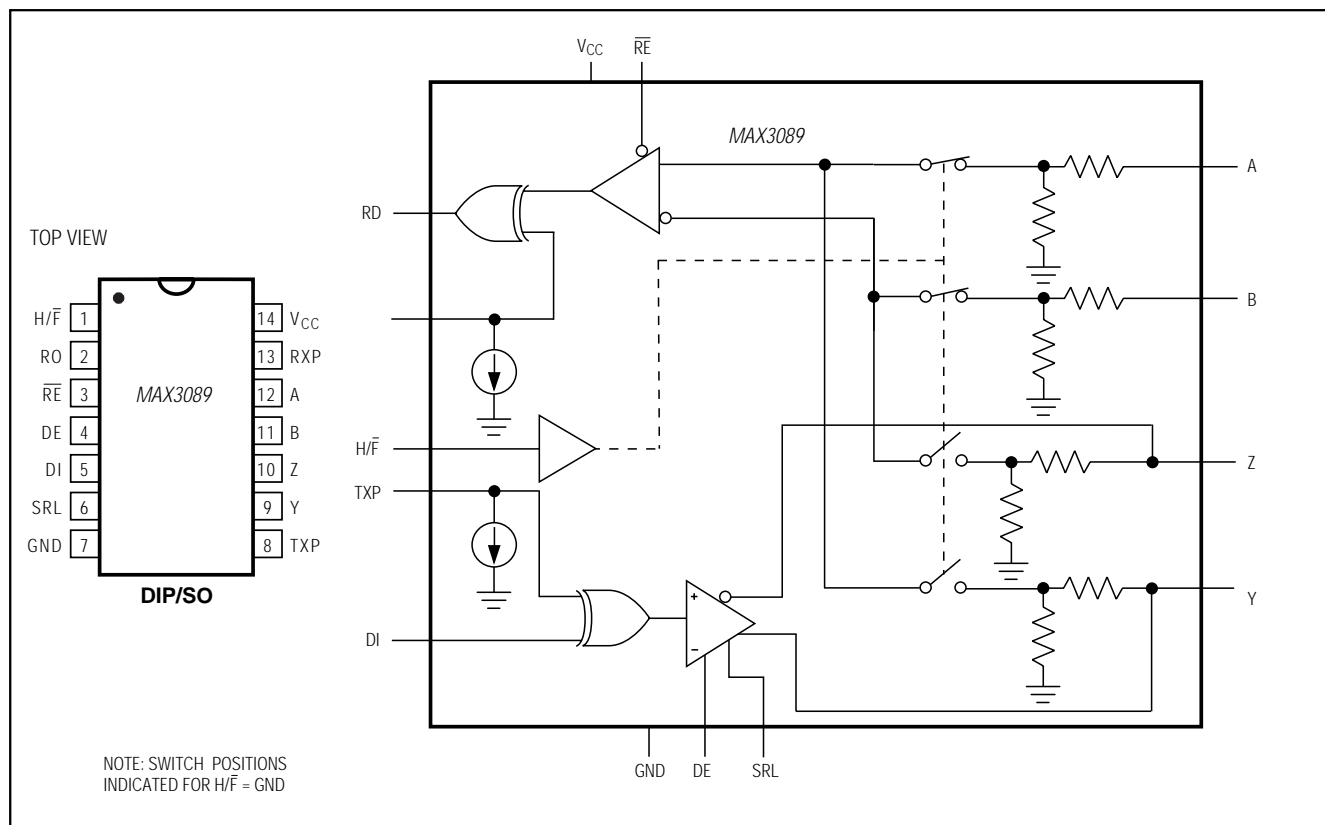

Figure 4. MAX3089 Pin Configuration and Functional Diagram

Figure 5. Driver DC Test Load

Fail-Safe

The MAX3080 family **guarantees** a logic-high receiver output when the receiver inputs are shorted or open, or when they are connected to a terminated transmission line with all drivers disabled. This is done by setting the receiver threshold between -50mV and -200mV. If the differential receiver input voltage (A-B) is greater than or equal to -50mV, RO is logic high. If A-B is less than or equal to -200mV, RO is logic low. In the case of a terminated bus with all transmitters disabled, the receiver's differential input voltage is pulled to 0V by the termination. With the receiver thresholds of the MAX3080 family, this results in a logic high with a 50mV minimum noise margin. Unlike previous fail-safe devices, the -50mV to -200mV threshold complies with the $\pm 200\text{mV}$ EIA/TIA-485 standard.

MAX3089 Programming

The MAX3089 has several programmable operating modes. Transmitter rise and fall times are programmable between 2500ns, 750ns, and 25ns, resulting in maximum data rates of 115kbps, 500kbps, and 10Mbps, respectively. To select the desired data rate, drive SRL to one of three possible states by using a three-state driver, by connecting it to VCC or GND, or by leaving it unconnected. For 115kbps operation, set the three-state device in high-impedance mode or leave SRL unconnected. For 500kbps operation, drive SRL high or connect it to VCC. For 10Mbps operation, drive SRL low or connect it to GND. SRL can be changed during operation without interrupting data communications.

Occasionally, twisted-pair lines are connected backward from normal orientation. The MAX3089 has two pins that invert the phase of the driver and the receiver to correct for this problem. For normal operation, drive

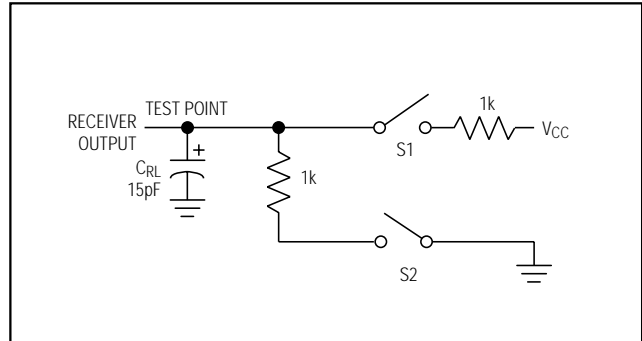

Figure 6. Receiver Enable/Disable Timing Test Load

TXP and RXP low, connect them to ground, or leave them unconnected (internal pull-down). To invert the driver phase, drive TXP high or connect it to VCC. To invert the receiver phase, drive RXP high or connect it to VCC. Note that the receiver threshold is positive when RXP is high.

The MAX3089 can operate in full- or half-duplex mode. Drive the H/F pin low, leave it unconnected (internal pull-down), or connect it to GND for full-duplex operation, and drive it high for half-duplex operation. In full-duplex mode, the pin configuration of the driver and receiver is the same as that of a MAX3080 (Figure 4). In half-duplex mode, the receiver inputs are switched to the driver outputs, connecting outputs Y and Z to inputs A and B, respectively. In half-duplex mode, the internal full-duplex receiver input resistors are still connected to pins 11 and 12.

Applications Information

256 Transceivers on the Bus

The standard RS-485 receiver input impedance is 12k Ω (one-unit load), and the standard driver can drive up to 32 unit loads. The MAX3080 family of transceivers have a 1/8-unit-load receiver input impedance (96k Ω), allowing up to 256 transceivers to be connected in parallel on one communication line. Any combination of these devices and/or other RS-485 transceivers with a total of 32 unit loads or less can be connected to the line.

Reduced EMI and Reflections

The MAX3080-MAX3085, and MAX3089 with SRL = VCC or unconnected, are slew-rate limited, minimizing EMI and reducing reflections caused by improperly terminated cables. Figure 14 shows the driver output waveform and its Fourier analysis of a 20kHz signal transmitted by a MAX3086/MAX3087/MAX3088, and MAX3089 with SRL = GND. High-frequency harmonic

Figure 16. Driver Output Waveform and FFT Plot of MAX3080/MAX3081/MAX3082, and MAX3089 with SRL = Unconnected, Transmitting a 20kHz Signal

components with large amplitudes are evident. Figure 15 shows the same signal displayed for a MAX3083/MAX3084/MAX3085, and MAX3089 with SRL = VCC), transmitting under the same conditions. Figure 15's high-frequency harmonic components are much lower in amplitude, compared with Figure 14's, and the potential for EMI is significantly reduced. Figure 16 shows the same signal displayed for a MAX3080/MAX3081/MAX3082, and MAX3089 with SRL = unconnected, transmitting under the same conditions. Figure 16's high-frequency harmonic components are even lower.

In general, a transmitter's rise time relates directly to the length of an unterminated stub, which can be driven with only minor waveform reflections. The following equation expresses this relationship conservatively:

$$\text{Length} = \text{trISE} / (10 \times 1.5\text{ns/ft})$$

where trISE is the transmitter's rise time.

For example, the MAX3080's rise time is typically 1320ns, which results in excellent waveforms with a stub length up to 90 feet. A system can work well with longer unterminated stubs, even with severe reflections, if the waveform settles out before the UART samples them.

Low-Power Shutdown Mode

(except MAX3082/MAX3085/MAX3088)

Low-power shutdown mode is initiated by bringing both \overline{RE} high and DE low. In shutdown, the devices typically draw only 1nA of supply current.

\overline{RE} and DE may be driven simultaneously; the parts are guaranteed not to enter shutdown if \overline{RE} is high and DE is low for less than 50ns. If the inputs are in this state for at least 600ns, the parts are guaranteed to enter shutdown.

Enable times t_{ZH} and t_{ZL} in the *Switching Characteristics* tables assume the part was not in a low-power shutdown state. Enable times $t_{ZH}(SHDN)$ and $t_{ZL}(SHDN)$ assume the parts were shut down. It takes drivers and receivers longer to become enabled from low-power shutdown mode ($t_{ZH}(SHDN)$, $t_{ZL}(SHDN)$) than from driver/receiver-disable mode (t_{ZH} , t_{ZL}).

Driver Output Protection

Two mechanisms prevent excessive output current and power dissipation caused by faults or by bus contention. The first, a foldback current limit on the output stage, provides immediate protection against short circuits over the whole common-mode voltage range (see *Typical Operating Characteristics*). The second, a thermal shutdown circuit, forces the driver outputs into a high-impedance state if the die temperature becomes excessive.

Line Length vs. Data Rate

The RS-485/RS-422 standard covers line lengths up to 4000 feet. For line lengths greater than 4000 feet, use the repeater application shown in Figure 17.

Figures 18, 19, and 20 show the system differential voltage for the parts driving 4000 feet of 26AWG twisted-pair wire at 110kHz into 120Ω loads.

Typical Applications

The MAX3082/MAX3085/MAX3088/MAX3089 transceivers are designed for bidirectional data communications on multipoint bus transmission lines. Figures 21 and 22 show typical network applications circuits. These parts can also be used as line repeaters, with cable lengths longer than 4000 feet, as shown in Figure 17.

To minimize reflections, the line should be terminated at both ends in its characteristic impedance, and stub lengths off the main line should be kept as short as possible. The slew-rate-limited MAX3082/MAX3085, and the two modes of the MAX3089, are more tolerant of imperfect termination.
