

Dual/Quad Low Noise, Precision Operational Amplifiers

FEATURES

- Low Noise 5nV/√Hz @ 1kHz Max
- Input Offset Voltage OP-270: 75μV Max
OP-470: 400μV Max
- Low Offset Voltage Drift OP-270: 1μV/°C Max
OP-470: 2μV/°C Max
- Very High Gain OP-270: 1500V/mV Min
OP-470: 1000V/mV Min
- Outstanding CMRR OP-270: 106dB Min
OP-470: 110dB Min
- Slew Rate 3.0V/μs Typ
- Gain Bandwidth Product 6MHz Typ
- Industry Standard Pinouts

APPLICATIONS

- Two and Three Op Amp Instrumentation Amplifiers
- Low Noise Signal Processing
- Microvolt Accuracy Threshold Detection
- Strain Gauge Amplifiers
- Accelerometer Amplifiers
- Infrared Detectors

DESCRIPTION

The OP-270 dual and OP-470 quad are high performance op amps with 80nVp-p noise, from 0.1Hz to 10Hz, offering comparable performance to the industry standard OP-27.

The OP-270 (OP-470) feature input offset voltage below 75μV (400μV) and offset drift under 1μV/°C (2μV/°C), guaranteed over the full military temperature range. Open-loop gain of the OP-270 (OP-470) is over 1.5 million (1.0 million) into a 10kΩ load ensuring excellent gain accuracy and linearity, even in high-gain applications. Input bias current is under ±20nA (±25nA) which reduces errors due to signal source resistance. The OP-270's (OP-470's) CMRR of over 106dB (110dB) and PSRR of less than 3.2μV/V (1.8μV/V) significantly reduce errors due to ground noise and power supply fluctuations. Power consumption of the dual OP-270 (quad OP-470) is one-third less than two (four) OP-27's, a significant advantage for power conscious applications. The OP-270 and OP-470 are unity-gain stable with a gain bandwidth product of 6MHz and a slew rate of 3.0V/μs.

For applications requiring higher performance, see the LT1124 and LT1125 data sheets.

Strain Gauge Signal Conditioner with Bridge Excitation

0.1Hz to 10Hz Voltage Noise

ABSOLUTE MAXIMUM RATINGS

Supply Voltage	±18V
Differential Input Voltage (Note 4)	±1.0V
Differential Input Current (Note 4)	±25mA
Input Voltages	Equal to Supply Voltages
Output Short Circuit Duration	Indefinite

Operating Temperature Range

OP270A/OP470A	-55°C to 125°C
OP270E/OP470E	
OP270G/OP470G	-40°C to 85°C
Storage Temperature Range	
All Grades	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.)	300°C

The ● denotes the specifications which apply over the full operating temperature range.

Note 1: This parameter is guaranteed but not 100% tested.

Note 2: This parameter is sample tested only.

Note 3: This parameter is guaranteed by the CMRR test.

Note 4: The inputs are protected by back-to-back diodes. Current limiting resistors are not used in order to achieve low noise. If differential input voltage exceeds $\pm 1.4V$, the input current should be limited to 25mA.

ELECTRICAL CHARACTERISTICS $V_S = \pm 15V, -40^\circ C \leq T_A \leq 85^\circ C$, unless otherwise noted.
