SPECIFICATIONS

1. Application

- 1) This document is applicable to the crystal unit that are delivered to user from Seiko Epson Corp.
- 2) This product complies with RoHS Directive.
- 3) This Product supplied (and any technical information furnished, if any) by Seiko Epson Corporation shall not be used for the development and manufacture of weapon of mass destruction or for other military purposes.Making available such products and technology to any third party who may use such products or technologies for the said purposes are also prohibited.
- 4) This product listed here is designed as components or parts for electronics equipment in general consumer use. We do not expect that any of these products would be incorporated or otherwise used as a component or part for the equipment, which requires an systems, and medical equipment, the functional purpose of which is to keep extra high reliability, such as satellite, rocket and other space life.

2. Product No. / Model

The product No. of this crystal unit is Q24FA20H0074800.

The model is FA-20H.

3. Packing

It is subject to the packing standard of Seiko Epson Corp.

4. Warranty

Defective parts which originate with us are replaced free of charge in the case of defects being found with 12 months after delivery.

5. Amendment and/or termination

Amendment and/or termination of this specification is subject to the agreement between the two parties.

[7] Notes

- 1. Max three (3) times re-flow is allowed. Its recommended to manually solder when not enough/no solder detected. (Using soldering iron at +350 °C Max × within 5 seconds)
- 2. Patterning on a board should follow our company recommended pattern.
- 3. Too much exciting shock or vibration may cause deterioration on damage.

 The product may damage depends on the condition such as a shock in assembly machinery.

 Please check your process condition in advance to minimize and maintain the shock level.
- 4. It is recommended to do patterning to the oscillator as short as possible. Abnormal oscillation may happened if the line is too long.
- 5. Condensation may occur when products are used/stored under remarkable temperature change.
- 6. This product may be affected to ultrasonic cleaning. It is depends on the cleaning conditions (Cleaning machine type/power/time/content/position etc.). The warranty will not cover any damage due to this type of usage. Check conditions prior to use.
- 7. When the substrate of oscillation become dewy, the crystal frequency is changed or stopped. Please use under without the dewfall.
- 8. Applying excessive excitation Drive Level to the crystal Unit may cause deterioration damage.
- 9. Few data or readings taken at user side may be different from our company's data. Confirmation of the different value is necessary before application.
- 10. To avoid malfunction, no pattern across or near the crystal is allowed.
- 11. Start up time of oscillation may be increased or no oscillation may occur unless adequate negative resistance is allocated in the oscillation circuit In order to avoid this, please provide enough negative resistance to the circuit design.

How to check the negative resistance

- (1) Connect the resister(R) to the circuit in series with the crystal Unit.
- (2) Adjust R so that oscillation can start (or stop).
- (3) Measure R when oscillation just start (or stop) in above (2).
- (4) Get the negative resistance -R=R+CI value.

6

(5) Recommended -R $[-R] > CI \times 5$

12. Please refer to packing specification for the storage method and packing standard.

TAPING SPECIFICATION

1. APPLICATION

This document is applicable to FA-20H / FA-206

[1] Taping specification

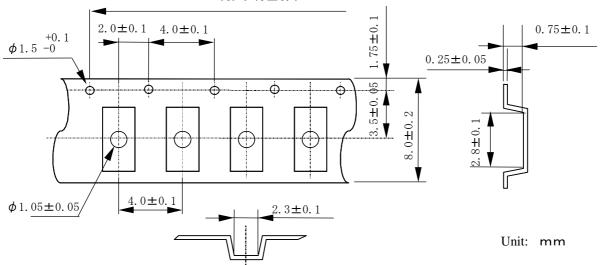

Subject to EIA-481 & IEC-60286

(1) Tape dimensions TE0804L

Material of the Carrier Tape: PS (Electrically conductive)

Material of the Top Tape : PET+PE

 $10P: 40\pm 0.1$

(2) Reel dimensions

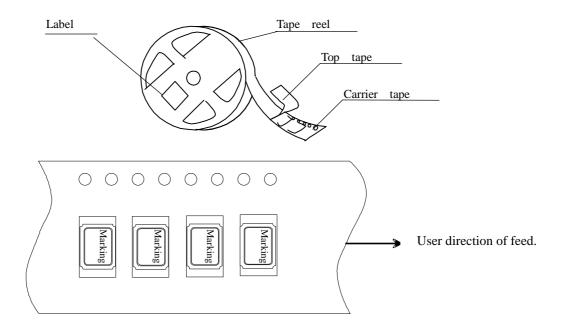

(a) Center material : PS

(b) Material of the Reel : PS

(4) Peel force of the cover tape

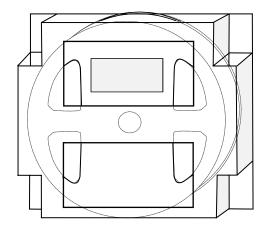

- ① angle : cover tape during peel off and the direction of unreeling shall be 165° to 180° .
- \bigcirc peel speed : 300 mm / min.
- ③ strength : 0.1 to 1 N.

[2] Inner Sleeve

a) Packing to antistatic bag

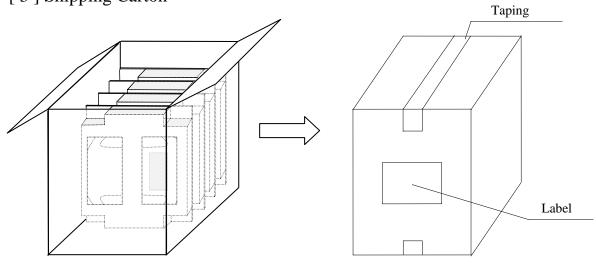

b) Packing to inner sleeve

* There is also a case to put the two reels.

[4] Marking

- (1) Reel marking
 - Reel marking shall consist of:
 - 1) Parts name
 - 2) Quantity
 - 3) Manufacturing Date or symbol
 - 4) Manufacturer's Date or symbol
 - 5) Others (if necessary)
- (2) Shipping carton marking
 - Shipping carton marking shall consist of :
 - 1) Parts name
 - 2) Quantity

[5] Quantity

• 3 000 pcs./reel

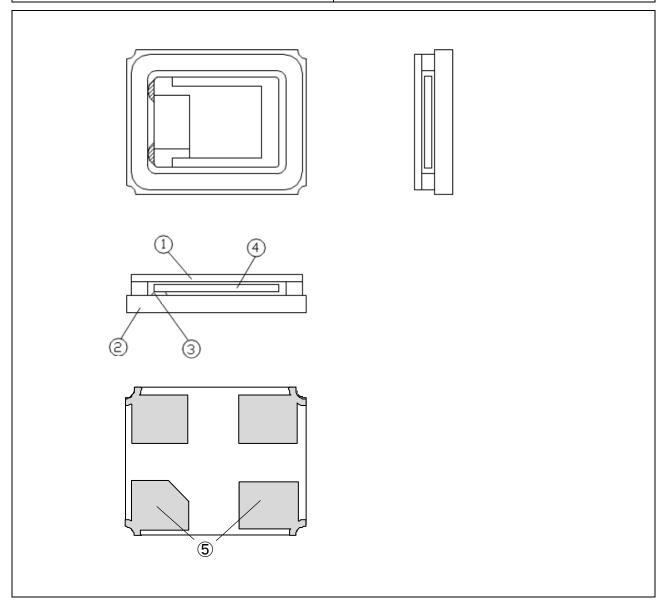

[6] Storage environment

- (1) Before open the packing, we recommend to keep less than +30 °C and 85 %RH of Humidity, and to use it less than 6 months after delivery.
- (2) We recommend to open Package in immediately before use. After open Package, We recommend to keeps less than 6 month. No need dry air before soldering work if it is less than temperature +30 °C, 85 humidity %RH.
- (3) Not to expose the sun.
- (4) Not to storage with some erosive chemicals.
- (5) Nothing is allowed to put on the reel or carton to prevent mechanical damage.

[7] Handling

To handle with care to prevent the damage of tape, reel and products.
