

## Omni-polar, High Voltage & Low Power Consumption Hall-Effect Switch IC

### 1 Product Description

The MT857X family is produced by BCD technology with both high performance and high reliability. The Hall IC internally includes an on-chip Hall voltage generator, a voltage regulator for operation with supply voltage of 3.0V to 24V, temperature compensation circuitry, small-signal amplifier, Hall IC with dynamic offset cancellation system, Schmitt trigger and 10K internal pull-up resistor. It also includes an clamp diode at output and reversed power supply protection enhances the robustness of Hall IC.

The product responds to either North pole or South pole magnetic fields. The output will be turned on (Low) when the magnetic flux density (B) is larger than the operating point (BOP), and be turned off (High) when the magnetic flux density (B) is lower than the releasing point (BRP).

The MT857X family provides a variety of packages to customers: SOT-23 for surface mount and flat TO-92 for through-hole mount. All packages are RoHS compliant.

### 2 Features

- BCD Technology
- Omni-polar Switch
- 3.0~24V Operating Vcc Range
- -40°C~125°C Operating Temperature
- Package Option:  
Flat TO-92  
SOT-23
- Magnetic Sensitivity Option:  
MT8571 (BOP=±32Gs, BRP=±27Gs)  
MT8572 (BOP=±80Gs, BRP=±60Gs)  
MT8573 (BOP=±60Gs, BRP=±45Gs)
- Internal 10K pull-up resistor
- -16V Reversed Power Supply Protection
- Output Limiting Current Protection
- RoHS Compliant: (EU)2015/863

### 3 Product Overview of MT857X

Part No.	Description
MT857XA	Flat TO-92, bulk packaging (1000pcs/bag)
MT857XAT	SOT-23, tape & reel (3000pcs/bag)

### 4 Applications

- Home appliances, Industrial
- Position Detection
- Magnetic Encoder
- Proximity Switch

### 5. Pin Configuration and Functions

	Vcc	Out	GND
SOT-23	1	2	3
Flat TO-92	1	3	2

### 6 Definition of Switching Function

Figure.2 shows the device functionality and hysteresis

Figure.2 Omni-polar Switching Function

### 7 Function Description

**B<sub>OP</sub>:** Operating Point, Magnetic flux density applied on the branded side of the package which turns the output driver ON ( $V_{OUT}=Low$ )

**B<sub>RP</sub>:** Releasing Point, Magnetic flux density applied on the branded side of the package which turns the output driver OFF ( $V_{OUT}=High$ )

**B<sub>HYST</sub>:** Hysteresis Window,  $|B_{OP} - B_{RP}|$

Devices that have a lower magnetic threshold ( $V_{OUT}=High$ ) detect magnets at a farther distance. Higher thresholds ( $V_{OUT}=Low$ ) generally require a closer distance or larger magnet.

### 8 Feature Description

The MT857X device is sensitive to the magnetic field component that is perpendicular to the top of the package

### 10.1 Absolute Maximum Ratings

Absolute maximum ratings are limited values to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability is not necessarily implied. Exposure to absolute maximum rating conditions for an extended period of time may affect device reliability.

Symbol	Parameters	Min	Max	Units
V <sub>CC</sub>	Supply Voltage	-	30	V
V <sub>RCC</sub>	Reverse Battery Voltage	-16	-	V
V <sub>OUT</sub>	Output Voltage	-	30	V
