一、简介 Introduction

Transient Voltage Suppressors(TVS) are semiconductor devices designed to provide protection against over voltage transients. When over voltage events occur, the silicon TVS activates from an very high impedance status to a very low impedance status by operating in the avalanche mode and uses a large junction area to absorb large transient currents in a fast response time, protecting voltage sensitive electronics equipment from damaging. JinHui supplies unipolar and bipolar TVS devices with axial and SMD packages, with maximum working voltage 5V to 440V, maximum power dissipation from 400W-5000W.
