PARAMETER		SYMBOL	TYPICAL	MAXIMUM	UNIT
Maximum junction-to-ambient [a, c]	t ≤ 5 s	R_{thJA}	30	36	°C/W
Maximum junction-to-case (drain)	Steady state	R_{thJC}	10	12	

Notes

a. Surface mounted on 1" x 1" FR4 board
b. t = 5 s
c. Maximum under steady state conditions is 72 °C/W
d. Based on T_C = 25 °C
e. Package limited
f. See solder profile (www.vishay.com/doc?73257). The PowerPAK ChipFET is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper tip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection
g. Rework conditions: manual soldering with a soldering iron is not recommended for leadless components

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note

a. The power dissipation P_D is based on T_J max. = 150 °C, using junction-to-case thermal resistance, and is more useful in settling the upper dissipation limit for cases where additional heatsinking is used. It is used to determine the current rating, when this rating falls below the package limit
