

16V 500mA Low Consumption Linear Regulator

DESCRIPTION

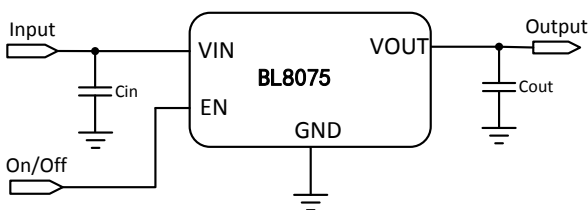

BL8075 series is a group of positive voltage output, low power consumption, low dropout voltage regulator. It can provide 300mA output current when input / output voltage differential drops to 600mV ($V_{out}=3.3V$), and it also provides foldback short-circuit protection, thermal protection and output current limit function. The very low power consumption of BL8075 ($I_q=10\mu A$) can greatly improve natural life of batteries.

BL8075 can provide output value in the range of 1.2V~5.0V in 0.1V steps. It also can customize on command.

BL8075 includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

BL8075 has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within $\pm 2\%$.

TYPICAL APPLICATION

NOTE: Input capacitor ($C_{in}=1\mu F$) and Output capacitor ($C_{out}=1\mu F$) are recommended in all application circuit. Ceramic capacitor is recommended.

FEATURES

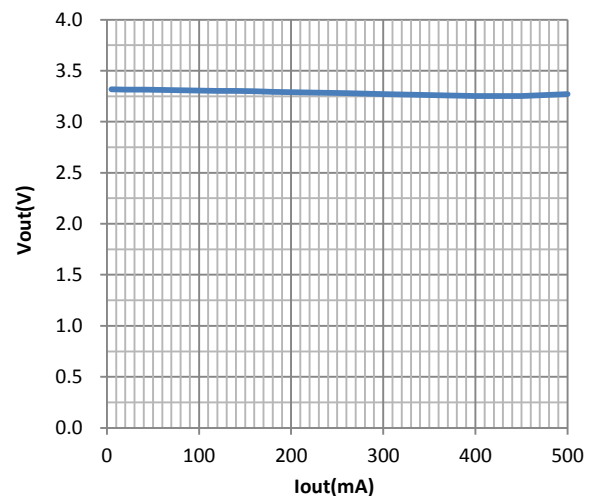

- Low Power Consumption: 10 μA (Typ.)
- Maximum Output Current: 500mA
- Small Dropout Voltage
600mV@300mA ($V_{out}=3.3V$)
1.2V@500mA ($V_{out}=3.3V$)
- Input Voltage Range: 3V~16V
- Output Voltage Range: 1.2V~5.0V (customized on command in 0.1V steps)
- Highly Accurate: $\pm 2\%$ ($\pm 1\%$ customized)
- Output Current Limit: 650mA

APPLICATIONS

- Battery Powered equipment
- Power Management of MP3、PDA、DSC、Mouse、PS2 Games
- Reference Voltage Source Regulation after Switching Power

BLOCK DIAGRAM

EXPLANATION

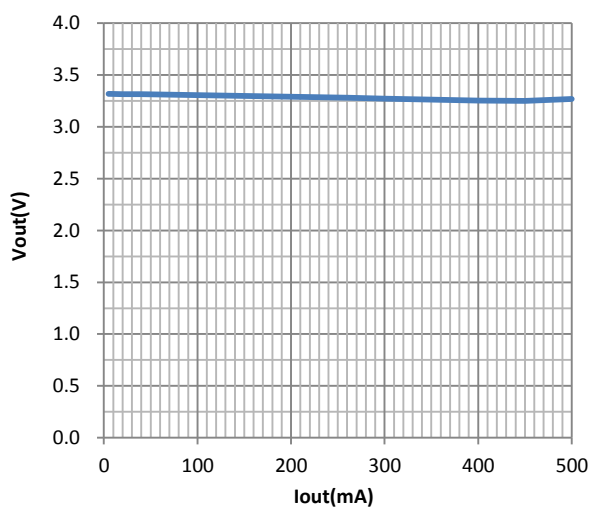

BL8075 is a series of low dropout voltage and low power consumption regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 500mA.

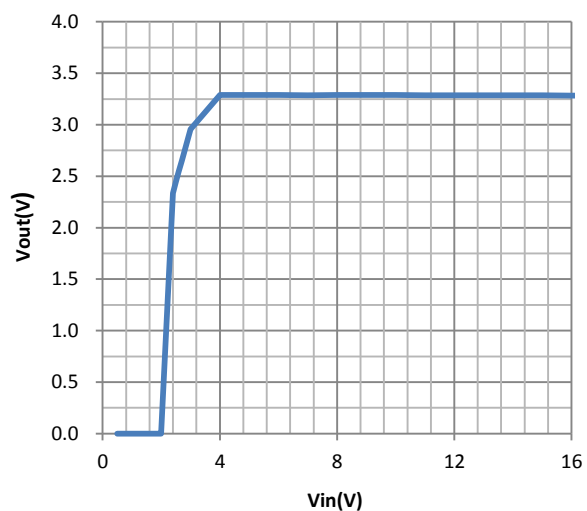

BL8075 uses trimming technique to assure the accuracy of output value within $\pm 2\%$, at the same time, temperature compensation is elaborately considered in this chip, which makes BL8075's temperature coefficient within $\pm 100\text{ppm}/^\circ C$.
