

CJ6206 Series

■ INTRODUCTION

The CJ6206 series are a group of positive voltage regulators manufactured by CMOS technologies with high ripple rejection, low power consumption and low dropout voltage, which can prolong battery life in portable electronics. The CJ6206 series work with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications. The CJ6206 series consume less than 0.1uA in shutdown mode and have fast turn-on time less than 50us. The series are very suitable for the battery-powered equipments, such as RF applications and other systems requiring a quiet voltage source.
