

#### FIFTEEN OUTPUT DIFFERENTIAL ZBUFFER FOR PCIE GEN2/3 AND QPI

9ZX21501C

## **Description**

The 9ZX21501C is a 15-output version of the Intel DB1900Z Differential Buffer suitable for PCI-Express Gen3 or QPI applications. The part is backwards compatible to PCIe Gen1 and Gen2. A fixed external feedback maintains low drift for critical QPI applications. In bypass mode, the 9ZX21501C can provide outputs up to 400MHz.

### **Recommended Application**

15-output PCIe Gen3/QPI buffer with fixed feedback for Romley platforms

### **Output Features**

15 - 0.7V current mode differential HCSL output pairs

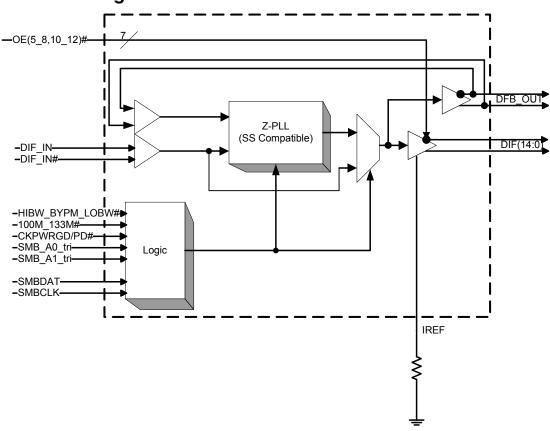

### Features/Benefits

- Fixed feedback path; Ops input-to-output delay
- 9 Selectable SMBus addresses; multiple devices can share same SMBus segment
- 7 dedicated OE# pins; hardware control of outputs
- PLL or bypass mode; PLL can dejitter incoming clock
- Selectable PLL BW; minimizes jitter peaking in downstream PLL's
- Spread spectrum compatible; tracks spreading input clock for EMI reduction
- SMBus Interface; unused outputs can be disabled
- 100MHz & 133.33MHz PLL mode; legacy QPI support
- Undriven differential outputs in Power Down mode for maximum power savings

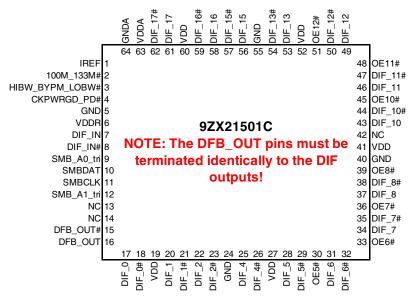

### **Key Specifications**

- Cycle-to-cycle jitter: <50ps
- Output-to-output skew: <65ps</li>
- Input-to-output delay: Fixed at 0 ps
- Input-to-output delay variation: <50ps</li>
- Phase jitter: PCle Gen3 <1ps rms
- Phase jitter: QPI 9.6GB/s <0.2ps rms

## **Functional Block Diagram**

## **Pin Configuration**

#### **Power Management Table**

| Inputs       | Control Bits/Pins  |   |   |                   | Outputs           | B                    |              |
|--------------|--------------------|---|---|-------------------|-------------------|----------------------|--------------|
| CKPWRGD•/PD# | DIF_IN/<br>DIF_IN# |   |   |                   |                   | DFB_OUT/<br>DFB_OUT# | PLL<br>State |
| 0            | Х                  | Х | Х | Hi-Z <sup>1</sup> | Hi-Z <sup>1</sup> | Hi-Z <sup>1</sup>    | OFF          |
|              |                    | 0 | Х | Hi-Z <sup>1</sup> | Hi-Z <sup>1</sup> | Running              | ON           |
| 1            | Running            | 1 | 0 | Running           | Running           | Running              | ON           |
|              |                    | 1 | 1 | Hi-7 <sup>1</sup> | Running           | Runnina              | ON           |

NOTE 1: Due to external pull down resistors, HI-Z results in Low/Low on the True/Complement outputs

### Functionality at Power-up (PLL mode)

| 100M_133M# | DIF_IN<br>(MHz) | DIF<br>MHz |  |  |
|------------|-----------------|------------|--|--|
| 1          | 100.00          | DIF_IN     |  |  |
| 0          | 133.33          | DIF_IN     |  |  |

### **PLL Operating Mode**

| HiBW_BypM_LoBW# | MODE      |
|-----------------|-----------|
| Low             | PLL Lo BW |
| Mid             | Bypass    |
| High            | PLL Hi BW |

NOTE: PLL is OFF in Bypass Mode

### **PLL Operating Mode Readback Table**

| HiBW_BypM_LoBW# | Byte0, bit 7 | Byte 0, bit 6 |
|-----------------|--------------|---------------|
| Low (Low BW)    | 0            | 0             |
| Mid (Bypass)    | 0            | 1             |
| High (High BW)  | 1            | 1             |

### **Tri-Level Input Thresholds**

| _     |                                   |
|-------|-----------------------------------|
| Level | Voltage                           |
| Low   | <0.8V                             |
| Mid   | 1.2 <vin<1.8v< td=""></vin<1.8v<> |
| High  | Vin > 2.2V                        |

#### **Power Connections**

| Pin Nu                | Pin Number |               |  |  |  |  |
|-----------------------|------------|---------------|--|--|--|--|
| VDD                   | GND        | Description   |  |  |  |  |
| 63                    | 64         | Analog PLL    |  |  |  |  |
| 6                     | 5          | Input Circuit |  |  |  |  |
| 19, 27, 41, 52,<br>60 | 24, 40, 55 | DIF clocks    |  |  |  |  |

### **SMBus Addressing**

| Piı        | n          | SMBus Address    |
|------------|------------|------------------|
| SMB_A1_tri | SMB_A0_tri | (Rd/Wrt bit = 0) |
| 0          | 0          | D8               |
| 0          | М          | DA               |
| 0          | 1          | DE               |
| M          | 0          | C2               |
| M          | М          | C4               |
| М          | 1          | C6               |
| 1          | 0          | CA               |
| 1          | М          | CC               |
| 1          | 1          | CE               |

# **Pin Descriptions**

| PIN# | PIN NAME              | TYPE | DESCRIPTION  |
|------|-----------------------|------|--|
|      |                       |      | This pin establishes the reference for the differential current-mode output pairs. It requires a fixed precision                   |
| 1    | IREF                  | OUT  | resistor to ground. 475ohm is the standard value for 100ohm differential impedance. Other impedances                               |
|      |                       |      | require different values. See data sheet.  |
| 2    | 100M_133M#            | IN   | 3.3V Input to select operating frequency   |
|      | 100IVI_100IVI#        | IIN  | See Functionality Table for Definition   |
| 3    | HIBW_BYPM_LOBW#       | IN   | Trilevel input to select High BW, Bypass or Low BW mode.   |
| - 0  | TIIDVV_DTT IVI_LODVV# | IIN  | See PLL Operating Mode Table for Details.  |
| 4    | CKPWRGD PD#           | IN   | Notifies device to sample latched inputs and start up on first high assertion, or exit Power Down Mode on                          |
| _    | OR WIND_I D#          | 111  | subsequent assertions. Low enters Power Down Mode.   |
| 5    | GND                   | PWR  | Ground pin.  |
| 6    | VDDR                  | PWR  | 3.3V power for differential input clock (receiver). This VDD should be treated as an analog power rail and filtered appropriately. |
| 7    | DIF_IN                | IN   | 0.7 V Differential TRUE input  |
| 8    | DIF_IN#               | IN   | 0.7 V Differential Complementary Input   |
| 9    | SMB_A0_tri            | IN   | SMBus address bit. This is a tri-level input that works in conjunction with the SMB_A1 to decode 1 of 9 SMBus Addresses.           |
| 10   | SMBDAT                | I/O  | Data pin of SMBUS circuitry, 5V tolerant   |
| 11   | SMBCLK                | IN   | Clock pin of SMBUS circuitry, 5V tolerant  |
| 40   |                       |      | SMBus address bit. This is a tri-level input that works in conjunction with the SMB_A0 to decode 1 of 9                            |
| 12   | SMB_A1_tri            | IN   | SMBus Addresses.   |
| 13   | NC                    | N/A  | No Connection.   |
| 14   | NC                    | N/A  | No Connection.   |
| 15   | DER OUT#              | OUT  | Complementary half of differential feedback output, provides feedback signal to the PLL for  |
| 15   | DFB_OUT#              | 001  | synchronization with input clock to eliminate phase error.   |
| 16   | DFB_OUT               | OUT  | True half of differential feedback output, provides feedback signal to the PLL for synchronization with the                        |
| 16   | DFB_001               | 001  | input clock to eliminate phase error.  |
| 17   | DIF_0                 | OUT  | 0.7V differential true clock output  |
| 18   | DIF_0#                | OUT  | 0.7V differential Complementary clock output   |
| 19   | VDD                   | PWR  | Power supply, nominal 3.3V   |

| 63 | VDDA    | PWR | 3.3V power for the PLL core.                 |
| 64 | GNDA    | PWR | Ground pin for the PLL core.                 |

## **Absolute Maximum Ratings**

Stresses above the ratings listed below can cause permanent damage to the 9ZX21501C. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

<sup>&</sup>lt;sup>1</sup>Guaranteed by design and characterization, not 100% tested in production. IREF = VDD/(3xR<sub>R</sub>). For R<sub>R</sub> = 475Ω (1%), I<sub>REF</sub> = 2.32mA. I<sub>OH</sub> = 6 x I<sub>REF</sub> and V<sub>OH</sub> = 0.7V @  $Z_O$ =50Ω (100Ω differential impedance).

## Electrical Characteristics—Current Consumption

 $TA = T_{COM}$ ; Supply Voltage VDD/VDDA = 3.3 V +/-5%, See Test Loads for Loading Conditions

| PARAMETER                | SYMBOL                | CONDITIONS  | MIN | TYP | MAX | UNITS | NOTES |
|--------------------------|-----------------------|---|-----|-----|-----|-------|-------|
| Operating Supply Current | I <sub>DD3.3OP</sub>  | All outputs active @100MHz, C <sub>L</sub> = Full load; |     | 390 | 425 | mA    | 1     |
| Powerdown Current        | I <sub>DD3.3PDZ</sub> | All differential pairs tri-stated                       |     | 5   | 15  | mA    | 1     |

<sup>&</sup>lt;sup>1</sup>Guaranteed by design and characterization, not 100% tested in production.

<sup>&</sup>lt;sup>2</sup> Measured from differential waveform

<sup>&</sup>lt;sup>3</sup> Slew rate is measured through the Vswing voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

<sup>&</sup>lt;sup>4</sup> Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

<sup>&</sup>lt;sup>5</sup> Vcross is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

<sup>&</sup>lt;sup>6</sup> The total variation of all Vcross measurements in any particular system. Note that this is a subset of V\_cross\_min/max (V\_cross absolute) allowed. The intent is to limit Vcross induced modulation by setting V\_cross\_delta to be smaller than V\_cross absolute.

### Electrical Characteristics-Skew and Differential Jitter Parameters

TA = T<sub>COM</sub>; Supply Voltage VDD/VDDA = 3.3 V +/-5%, See Test Loads for Loading Conditions

#### Notes for preceding table:

8

9ZX21501C

<sup>&</sup>lt;sup>1</sup> Measured into fixed 2 pF load cap. Input to output skew is measured at the first output edge following the corresponding input.

<sup>&</sup>lt;sup>2</sup> Measured from differential cross-point to differential cross-point. This parameter can be tuned with external feedback path, if present.

<sup>&</sup>lt;sup>3</sup> All Bypass Mode Input-to-Output specs refer to the timing between an input edge and the specific output edge created by it.

<sup>&</sup>lt;sup>4</sup> This parameter is deterministic for a given device

<sup>&</sup>lt;sup>5</sup> Measured with scope averaging on to find mean value. DIF\_IN slew rate must be matched to DIF output slew rate.

<sup>&</sup>lt;sup>6</sup>.t is the period of the input clock

<sup>&</sup>lt;sup>7</sup> Measured as maximum pass band gain. At frequencies within the loop BW, highest point of magnification is called PLL jitter peaking.

<sup>&</sup>lt;sup>8.</sup> Guaranteed by design and characterization, not 100% tested in production.

<sup>&</sup>lt;sup>9</sup> Measured at 3 db down or half power point.

<sup>10</sup> Duty cycle distortion is the difference in duty cycle between the output and the input clock when the device is operated in bypass mode

<sup>&</sup>lt;sup>11</sup> Measured from differential waveform

<sup>&</sup>lt;sup>1</sup> Applies to all outputs.

<sup>&</sup>lt;sup>2</sup> See http://www.pcisig.com for complete specs

<sup>&</sup>lt;sup>3</sup> Sample size of at least 100K cycles. This figures extrapolates to 108ps pk-pk @ 1M cycles for a BER of 1-12.

<sup>&</sup>lt;sup>4</sup> Subject to final ratification by PCI SIG.

 $<sup>^{5}</sup>$  Calculated from Intel-supplied Clock Jitter Tool v 1.6.3

<sup>&</sup>lt;sup>6</sup> For RMS figures, additive jitter is calculated by solving the following equation: (Additive jitter)^2 = (total jitter)^2 - (input jitter)^2

9ZX21501 Differential Test Loads

<sup>&</sup>lt;sup>1</sup>Guaranteed by design and characterization, not 100% tested in production.

<sup>&</sup>lt;sup>2</sup> All Long Term Accuracy specifications are guaranteed with the assumption that the input clock complies with CK420BQ/CK410B+ accuracy requirements (+/-100ppm). The 9ZX21501 itself does not contribute to ppm error.

<sup>&</sup>lt;sup>3</sup> Driven by SRC output of main clock, 100 MHz PLL Mode or Bypass mode

<sup>&</sup>lt;sup>4</sup> Driven by CPU output of main clock, 133 MHz PLL Mode or Bypass mode

### General SMBus Serial Interface Information for 9ZX21501C

#### **How to Write**

- · Controller (host) sends a start bit
- Controller (host) sends the write address
- IDT clock will acknowledge
- Controller (host) sends the beginning byte location = N
- IDT clock will acknowledge
- Controller (host) sends the byte count = X
- IDT clock will acknowledge
- Controller (host) starts sending Byte N through Byte N+X-1
- IDT clock will acknowledge each byte one at a time
- Controller (host) sends a Stop bit

Note: XX<sub>(H)</sub> is defined by SMBus addess select pins.

#### **How to Read**

- · Controller (host) will send a start bit
- Controller (host) sends the write address XX<sub>(H)</sub>
- IDT clock will acknowledge
- Controller (host) sends the beginning byte location = N
- IDT clock will acknowledge
- · Controller (host) will send a separate start bit
- Controller (host) sends the read address YY<sub>(H)</sub>
- IDT clock will acknowledge
- IDT clock will send the data byte count = X
- IDT clock sends Byte N+X-1
- IDT clock sends Byte 0 through Byte X (if X<sub>(H)</sub> was written to Byte 8)
- Controller (host) will need to acknowledge each byte
- · Controller (host) will send a not acknowledge bit
- · Controller (host) will send a stop bit

## **Marking Diagram**

#### Notes:

- 1. "LOT" is the lot number.
- 2. "COO" is the country of origin.
- 2. "YYWW" is the last two digits of the year and week that the part was assembled.
- 3. "L" denotes RoHS compliant package.

## **Ordering Information**

| Part / Order Number | Shipping Package | Package    | Temperature |
|---------------------|------------------|------------|-------------|
| 9ZX21501CKLF        | Trays            | 64-pin MLF | 0 to +70°C  |
| 9ZX21501CKLFT       | Tape and Reel    | 64-pin MLF | 0 to +70°C  |

<sup>&</sup>quot;LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.

<sup>&</sup>quot;C" is the device revision designator (will not correlate with the datasheet revision).

## **Revision History**

| Rev. | Issue Date  | Who   | Description   | Page # |
|------|-------------|-------|---|--------|
| Α    | 8/3/2010    | RDW   | Move to final.  |        |
|      |             |       | 1 Added note to pinout indicating that DFB_OUT pins need to be terminated identically |        |
| В    | 5/11/2011   | RDW   | to normal DIF outputs.  | 2      |
| С    | 12/8/2011   | RDW   | 1. Updated tDSPO_BYP parameter from +/-350 to +/-250ps                                | 7      |
| D    | 12/15/2011  | RDW   | 1. Lowered IDD3.3OP from MAX 500mA/TYP 407mA to MAX 425mA/ TYP 390mA                  | 6      |
|      | 12/10/2011  | 11211 | 2. Lowered IDD3.3PDZ from MAX36mA/TYP 12mA to MAX 15mA/ TYP 5mA                       |        |
| F    | 4/23/2012   | RDW   | 1. Updated Rp values on Output Terminations Table from 43.2 ohms to 42.2 or 43.2      | 9      |
|      | 4/20/2012   |       | ohms to be consistent with Intel.   | J      |
| F    | F 4/16/2013 | RDW   | Corrected typo in OE# Latency parameter; changed 1 min. to 3 max. cycles to 4 min. to | 6      |
| '    | 4/10/2013   | ווטעע | 12 max. clocks  | O      |

#### **IMPORTANT NOTICE AND DISCLAIMER**

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES ("RENESAS") PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers skilled in the art designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only for development of an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising out of your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
