## Analog Multiplexers / Demultiplexers with LSTTL Compatible Inputs

### High-Performance Silicon-Gate CMOS

The MC74HCT4051A, MC74HCT4052A and MC74HCT4053A utilize silicon-gate CMOS technology to achieve fast propagation delays, low ON resistances, and low OFF leakage currents. These analog multiplexers/demultiplexers control analog voltages that may vary across the complete power supply range (from  $V_{CC}$  to  $V_{EE}$ ).

The HCT4051A, HCT4052A and HCT4053A are identical in pinout to the metal-gate MC14051AB, MC14052AB and MC14053AB. The Channel-Select inputs determine which one of the Analog Inputs/Outputs is to be connected, by means of an analog switch, to the Common Output/Input. When the Enable pin is HIGH, all analog switches are turned off.

The Channel-Select and Enable inputs are compatible with standard CMOS and LSTTL outputs.

These devices have been designed so that the ON resistance ( $R_{on}$ ) is more linear over input voltage than  $R_{on}$  of metal-gate CMOS analog switches.

For a multiplexer/demultiplexer with injection current protection, see HC4851A and HCT4851A.

#### Features

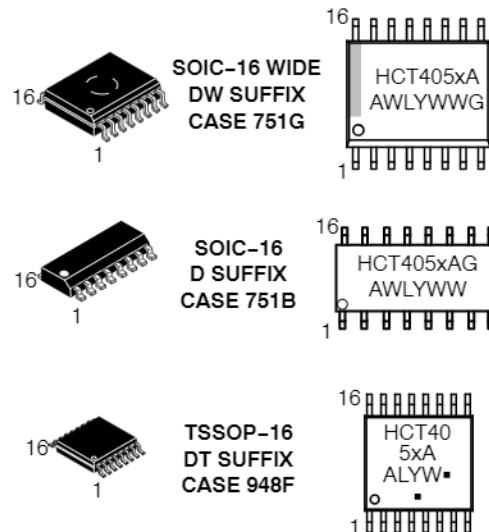

- Fast Switching and Propagation Speeds
- Low Crosstalk Between Switches
- Diode Protection on All Inputs/Outputs
- Analog Power Supply Range ( $V_{CC} - V_{EE}$ ) = 2.0 to 12.0 V
- Digital (Control) Power Supply Range ( $V_{CC} - GND$ ) = 2.0 to 6.0 V
- Improved Linearity and Lower ON Resistance Than Metal-Gate Counterparts
- Low Noise
- In Compliance with the Requirements of JEDEC Standard No. 7 A
- Chip Complexity: HCT4051A – 184 FETs or 46 Equivalent Gates  
HCT4052A – 168 FETs or 42 Equivalent Gates  
HCT4053A – 156 FETs or 39 Equivalent Gates
- These Devices are Pb-Free and are RoHS Compliant

## MAXIMUM RATINGS

| Symbol           | Parameter  | Value  | Unit |
|------------------|--|--|------|
| V <sub>CC</sub>  | Positive DC Supply Voltage (Referenced to GND)<br>(Referenced to V <sub>EE</sub> ) | -0.5 to +7.0<br>-0.5 to +14.0                  | V    |
| V <sub>EE</sub>  | Negative DC Supply Voltage (Referenced to GND)                                     | -7.0 to +5.0                                   | V    |
| V <sub>IS</sub>  | Analog Input Voltage   | V <sub>EE</sub> - 0.5 to V <sub>CC</sub> + 0.5 | V    |
| V <sub>in</sub>  | Digital Input Voltage (Referenced to GND)  | -0.5 to V <sub>CC</sub> + 0.5                  | V    |
| I                | DC Current, Into or Out of Any Pin   | ±25  | mA   |
| P <sub>D</sub>   | Power Dissipation in Still Air, SOIC Package<br>TSSOP Package                      | 500<br>450                                     | mW   |
| T <sub>stg</sub> | Storage Temperature Range  | -65 to +150                                    | °C   |

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

†Derating – SOIC Package: – 7 mW/°C from 65°C to 125°C  
TSSOP Package: – 6.1 mW/°C from 65°C to 125°C

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>in</sub> and V<sub>out</sub> should be constrained to the range GND ≤ (V<sub>in</sub> or V<sub>out</sub>) ≤ V<sub>CC</sub>. Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V<sub>CC</sub>). Unused outputs must be left open.

# MC74HCT4051A, MC74HCT4052A, MC74HCT4053A

## RECOMMENDED OPERATING CONDITIONS

| Symbol     | Parameter   | Min  | Max              | Unit                      |    |
|------------|---|--|------------------|---------------------------|----|
| $V_{CC}$   | Positive DC Supply Voltage (Referenced to GND)<br>(Referenced to $V_{EE}$ ) | 2.0<br>2.0   | 6.0<br>12.0      | V                         |    |
| $V_{EE}$   | Negative DC Supply Voltage, Output (Referenced to GND)                      | -6.0   | GND              | V                         |    |
| $V_{IS}$   | Analog Input Voltage  | $V_{EE}$   | $V_{CC}$         | V                         |    |
| $V_{in}$   | Digital Input Voltage (Referenced to GND)                                   | GND  | $V_{CC}$         | V                         |    |
| $V_{IO}^*$ | Static or Dynamic Voltage Across Switch                                     |  | 1.2              | V                         |    |
| $T_A$      | Operating Temperature Range, All Package Types                              | -55  | +125             | °C                        |    |
| $t_r, t_f$ | Input Rise/Fall Time<br>(Channel Select or Enable Inputs)                   | $V_{CC} = 2.0\text{ V}$<br>$V_{CC} = 3.0\text{ V}$<br>$V_{CC} = 4.5\text{ V}$<br>$V_{CC} = 6.0\text{ V}$ | 0<br>0<br>0<br>0 | 1000<br>600<br>500<br>400 | ns |

\*For voltage drops across switch greater than 1.2 V (switch on), excessive  $V_{CC}$  current may be drawn; i.e., the current out of the switch may contain both  $V_{CC}$  and switch input components. The reliability of the device will be unaffected unless the Maximum Ratings are exceeded.

## APPLICATIONS INFORMATION

The maximum analog voltage swings are determined by the supply voltages  $V_{CC}$  and  $V_{EE}$ . The positive peak analog voltage should not exceed  $V_{CC}$ . Similarly, the negative peak analog voltage should not go below  $V_{EE}$ . In this example, the difference between  $V_{CC}$  and  $V_{EE}$  is ten volts. Therefore, using the configuration of Figure 21, a maximum analog signal of ten volts peak-to-peak can be controlled. Unused analog inputs/outputs may be left floating (i.e., not connected). However, tying unused analog inputs and outputs to  $V_{CC}$  or GND through a low value resistor helps minimize crosstalk and feed-through noise that may be picked up by an unused switch.

Although used here, balanced supplies are not a requirement. The only constraints on the power supplies are that:

$$\begin{aligned}V_{CC} - \text{GND} &= 2 \text{ to } 6 \text{ V} \\V_{EE} - \text{GND} &= 0 \text{ to } -6 \text{ V} \\V_{CC} - V_{EE} &= 2 \text{ to } 12 \text{ V} \\ \text{and } V_{EE} &\leq \text{GND}\end{aligned}$$

When voltage transients above  $V_{CC}$  and/or below  $V_{EE}$  are anticipated on the analog channels, external Germanium or Schottky diodes ( $D_x$ ) are recommended as shown in Figure 22. These diodes should be able to absorb the maximum anticipated current surges during clipping.
