

NSS40302PDR2G

Complementary 40 V, 6.0 A, Low $V_{CE(sat)}$ Transistor

ON Semiconductor's e²PowerEdge family of low $V_{CE(sat)}$ transistors are surface mount devices featuring ultra low saturation voltage ($V_{CE(sat)}$) and high current gain capability. These are designed for use in low voltage, high speed switching applications where affordable efficient energy control is important.

Typical applications are low voltage motor controls in mass storage products such as disc drives and tape drives. In the automotive industry they can be used in air bag deployment and in the instrument cluster. The high current gain allows e²PowerEdge devices to be driven directly from PMU's control outputs, and the Linear Gain (Beta) makes them ideal components in analog amplifiers.

Features

- NSV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q101 Qualified and PPAP Capable
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

MAXIMUM RATINGS ($T_A = 25^\circ\text{C}$)

Rating		Symbol	Max	Unit
Collector-Emitter Voltage	NPN PNP	V_{CEO}	40 -40	Vdc
Collector-Base Voltage	NPN PNP	V_{CBO}	40 -40	Vdc
Emitter-Base Voltage	NPN PNP	V_{EBO}	6.0 -7.0	Vdc
Collector Current – Continuous	NPN PNP	I_C	3.0 -3.0	A
Collector Current – Peak	NPN PNP	I_{CM}	6.0 -6.0	A
Electrostatic Discharge		ESD	HBM Class 3B MM Class C	

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
