

Dual Channel OptoHiT™ Series, High-Temperature Phototransistor Optocoupler in Small Outline 8-Pin Package

ON Semiconductor®

FOD8802 Series

Description

The FOD8802 dual channel optocoupler is a best-in-class phototransistor, optocoupler utilizing ON Semiconductor leading-edge proprietary process technology to achieve high operating temperature performance, up to 125°C. It consists of two aluminum gallium arsenide (AlGaAs) infrared light emitting diode optically coupled to two phototransistors, in a small outline, 8-pin SOIC package. It delivers consistent current transfer ratio at very low input current over temperature. The AlGaAs light output degradation performance is significantly better than the commodity optocoupler products that uses the standard GaAs, extending lifetime and reducing the guardband requirements to compensate for temperature drift. The input-output isolation voltage, V_{iso} , is rated at 2500 VAC_{RMS}.

Features

- Excellent CTR Linearity at High Temperature
- CTR at Very Low Input Current, I_F
- High Isolation Voltage Regulated by Safety Agency, UL1577, 2500 VAC_{RMS} for 1 min.
- Applicable to Infrared Ray Reflow, 260°C
- These are Pb-Free Devices

Typical Applications

- Primarily Suited for DC-DC Converters
- For Ground Loop Isolation, Signal to Noise Isolation
- Communications – Adapters, Chargers
- Consumer – Appliances, Set Top Boxes
- Industrial – Power Supplies, Motor Control, Programmable Logic Control
