Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. # FPF1039 Low On-Resistance, Slew-Rate-Controlled Load Switch

## Features

- 1.2 V to 5.5 V Input Voltage Operating Range
- Typical  $R_{ON}$ :
  - 20 m $\Omega$  at  $V_{IN}=5.5$  V
  - 21 m $\Omega$  at  $V_{IN}=4.5$  V
  - 37 m $\Omega$  at  $V_{IN}=1.8$  V
  - 75 m $\Omega$  at  $V_{IN}=1.2$  V
- Slew Rate / Inrush Control with  $t_R$ : 2.7 ms (Typical)
- 3.5 A Maximum Continuous Current Capability
- Output Capacitor Discharge Function
- Low <1  $\mu$ A Shutdown Current
- ESD Protected: Above 8 kV HBM, 1.5 kV CDM
- GPIO / CMOS-Compatible Enable Circuitry

## Applications

- HDD, Storage, and Solid-State Memory Devices
- Portable Media Devices, UMPC, Tablets, MIDs
- Wireless LAN Cards and Modules
- SLR Digital Cameras
- Portable Medical Devices
- GPS and Navigation Equipment
- Industrial Handheld and Enterprise Equipment

## Description

The FPF1039 advanced load-management switch target applications requiring a highly integrated solution for disconnecting loads powered from DC power rail (<6 V) with stringent shutdown current targets and high load capacitances (up to 200  $\mu$ F). The FPF1039 consists of slew-rate controlled low-impedance MOSFET switch (21 m $\Omega$  typical) and other integrated analog features. The slew-rate controlled turn-on characteristic prevents inrush current and the resulting excessive voltage droop on power rails.

This device has exceptionally low shutdown current drain (<1  $\mu$ A maximum) that facilitates compliance in low standby power applications. The input voltage range operates from 1.2 V to 5.5 V DC to support a wide range of applications in consumer, optical, medical, storage, portable, and industrial device power management.

Switch control is managed by a logic input (active HIGH) capable of interfacing directly with low-voltage control signal / GPIO with no external pull-up required. The device is packaged in advanced fully "green" 1mm x1.5 mm Wafer-Level Chip-Scale Packaging (WLCSP); providing excellent thermal conductivity, small footprint, and low electrical resistance for wider application usage.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

## Application Information

### Input Capacitor

This IntelliMAX™ switch doesn't require an input capacitor. To reduce device inrush current, a 0.1 μF ceramic capacitor, C<sub>IN</sub>, is recommended close to the VIN pin. A higher value of C<sub>IN</sub> can be used to reduce the voltage drop experienced as the switch is turned on into a large capacitive load.

### Output Capacitor

While this switch works without an output capacitor: if parasitic board inductance forces V<sub>OUT</sub> below GND when switching off; a 0.1 μF capacitor, C<sub>OUT</sub>, should be placed between V<sub>OUT</sub> and GND.

### Fall Time

Device output fall time can be calculated based on RC constant of the external components as follows:

$$t_F = R_L \times C_L \times 2.2 \quad (1)$$

where t<sub>F</sub> is 90% to 10% fall time, R<sub>L</sub> is output load, and C<sub>L</sub> is output capacitor.

The same equation works for a device with a pull-down output resistor. R<sub>L</sub> is replaced by a parallel connected pull-down and an external output resistor combination as:

$$t_F = \frac{R_L \times R_{PD}}{R_L + R_{PD}} \times C_L \times 2.2 \quad (2)$$

where t<sub>F</sub> is 90% to 10% fall time, R<sub>L</sub> is output load, R<sub>PD</sub>=65 Ω is output pull-down resistor, and C<sub>L</sub> is the output capacitor.

### Resistive Output Load

If resistive output load is missing, the IntelliMAX switch without a pull-down output resistor does not discharge the output voltage. Output voltage drop depends, in that case, mainly on external device leaks.

### Application Specifics

Figure 33. Device Setup

At maximum operational voltage (V<sub>IN</sub>=5.5 V), device inrush current might be higher than expected. Spike current should be taken into account if V<sub>IN</sub>>5 V and the output capacitor is much larger than the input capacitor. Input current can be calculated as:

$$I_{IN}(t) \approx \frac{V_{OUT}(t)}{R_{LOAD}} + (C_{LOAD} - C_{IN}) \frac{dV_{OUT}(t)}{dt} \quad (3)$$

where switch and wire resistances are neglected and capacitors are assumed ideal.

Estimating V<sub>OUT</sub>(t)=V<sub>IN</sub>/10 and using experimental formula for slew rate (dV<sub>OUT</sub>(t)/dt), spike current can be written as:

$$\max(I_{IN}) = \frac{V_{IN}}{10R_{LOAD}} + (C_{LOAD} - C_{IN}) (0.05V_{IN} - 0.255) \quad (4)$$

where supply voltage V<sub>IN</sub> is in volts, capacitances are in micro farads, and resistance is in ohms.

Example: If V<sub>IN</sub>=5.5V, C<sub>LOAD</sub>=100 μF, C<sub>IN</sub>=10 μF, and R<sub>LOAD</sub>=50 Ω; calculate the spike current by:

$$\max(I_{IN}) = \frac{5.5}{10 \times 50} + (100 - 10)(0.05 \times 5.5 - 0.255) A = 1.8 A \quad (5)$$

Maximum spike current is 1.8 A, while average ramp-up current is:

$$I_{IN}(t) \approx \frac{V_{OUT}(t)}{R_{LOAD}} + (C_{LOAD} - C_{IN}) \frac{dV_{IN}(t)}{dt} \quad (6)$$

$$\approx 2.75 / 50 + 100 \times 0.0022 = 0.275 A$$

### Output Discharge

FPF1039 contains a 65 Ω on-chip pull-down resistor for quick output discharge. The resistor is activated when the switch is turned off.

### Recommended Layout

For best thermal performance and minimal inductance and parasitic effects, it is recommended to keep input and output traces short and capacitors as close to the device as possible. Figure 34 is a recommended layout for this device to achieve optimum performance.

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**ANTI-COUNTERFEITING POLICY**

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
