3.3 V Quad Channel Half-Duplex M-LVDS Driver Receiver

Description

The NB3N401S is a 3.3 V supply Quad Multipoint Low Voltage Differential Signals (M-LVDS) line drivers and receivers. The device is TIA/EIA-899 compliant. The device offers the Type 1 receiver threshold at 0.0 V and the Type 2 receiver threshold at 0.1 V. The NB3N401S supports four independent Half Duplex bus configurations.

Each of the four sections has Pin (SEL) for selection of Type-1 and Type-2 receivers that detect the bus state with as little as 50 mV of differential input voltage over a common mode voltage range of -1 V to 3.4 V. The Type-1 receivers have near zero thresholds (± 50 mV) and exhibit 25 mV of differential input voltage hysteresis to prevent output oscillations with slowly changing signals or loss of input. Type-2 receivers include an offset threshold to provide a detectable voltage under open-circuit, idle-bus, and other faults conditions.

The NB3N401S is offered in a 48 Pin 7 mm \times 7 mm \times 0.9 mm QFN package.

Notes:

1. All Input pulses are supplied by a Generator having characteristics as follows: t_r or $t_f \leq 1$ ns, pulse frequency = 1 MHz & Duty cycle = 50 \pm 5%.
2. All Resistors are metal Film, Surface Mount, \pm 1% and located within 20 mm of the D.U.T.
3. C_L is combination of 20% tolerance low-loss Ceramic Surface Mount Capacitor and fixture Capacitance within 20 mm of the D.U.T.
