

# AT6211 Series

## High Speed LDO Regulators, High PSRR, Low noise

### Product Summary

The AT6211 series are highly accurate, low noise, CMOS LDO Voltage Regulators. Offering low output noise, high ripple rejection ratio, low dropout and very fast turn-on times, the AT6211 series is ideal for today's cutting edge mobile phone. Internally the AT6211 includes a reference voltage source, error amplifiers, driver transistors, current limiters and phase compensators. The AT6211's current limiters' foldback circuit also operates as a short protect for the output current limiter and the output pin. The AT6211 series is also fully compatible with low ESR ceramic capacitors, reducing cost and improving output stability. This high level of output stability is maintained even during frequent load fluctuations, due to the excellent transient response performance and high PSRR achieved across a broad range of frequencies. The CE function allows the output of regulator to be turned off, resulting in greatly reduced power consumption.

### Features

- Maximum Output Current: 500mA  
( $V_{in}$ =4.3V,  $V_{out}$ =3.3V)
- Operating Voltage Range: 1.2V~6.0V
- Dropout Voltage: 100mV@ $I_{out}$ =100mA
- High Accuracy:  $\pm 1\%$
- Low Power Consumption: 30uA (TYP.)
- Standby Current: 0.1uA (TYP.)
- High Ripple Rejection: 70dB@1KHz (AT6211C33)
- Low output noise: 50uVrms
- Line Regulation: 0.05% (TYP.)

### Applications

- Mobile phones
- Cordless phones, radio communication equipment
- Portable games
- Cameras, Video cameras
- Reference voltage sources
- Battery-Powered Equipment

### Package

- 3-pin SOT89-3, SOT23-3
- 5-pin SOT23-5

Note: 1.  $V_{OUT}(T)$  : Specified Output Voltage

2.  $V_{OUT}(E)$  : Effective Output Voltage ( ie. The output voltage when " $V_{OUT}(T) + 1.0V$ " is provided at the Vin pin while maintaining a certain Iout value.)

3.  $V_{DIF}: V_{IN1} - V_{OUT}(E)'$

$V_{IN1}$ : The input voltage when  $V_{OUT}(E)'$  appears as input voltage is gradually decreased.

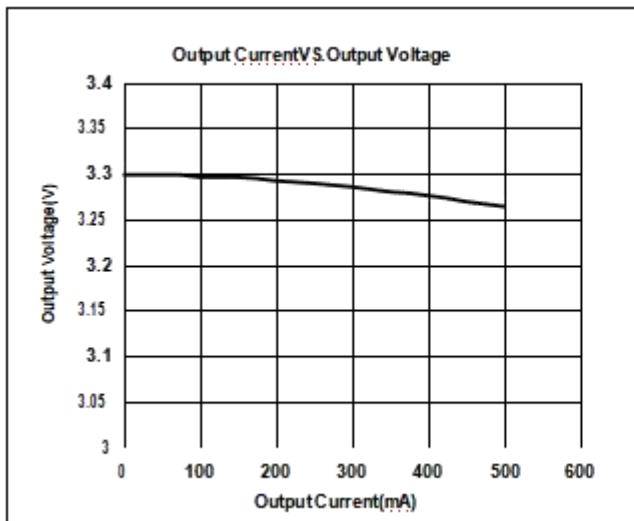

$V_{OUT}(E)'$ : A voltage equal to 98% of the output voltage whenever an amply stabilized Iout{ $V_{OUT}(T) + 1.0V$ } is input.
