### General Description

The TPMIC5233 is a low dropout (LDO) voltage regulator with enable function offering the benefits of high input voltage, low-dropout voltage, low-power consumption, and miniaturized packaging. The TPMIC5233 is stable with the ceramic output capacitor over its wide input range from 2V to 36V and the entire range of output load current.

The features of low quiescent current as low as 2μA and zero disable current is ideal for powering the battery equipment to a longer service life. The TPMIC5233
