Outline :

BL8553 series is a group of positive voltage output, low power consumption, low dropout voltage, three terminal regulator. It can provide 200mA output current when input / output voltage differential drops to 470mV (Vout=2.0V) 。 The very low power consumption of BL8553 (Iq=7uA) can greatly improve natural life of batteries.

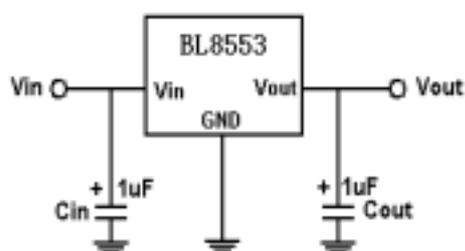

BL8553 can provide output value in the range of 1.5V~6.0V in 0.1V steps. It also can customized on command.

BL8553 includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

BL8553 has well load transient response and good temperature characteristic, which can assure the stability of chip and power system. And it uses trimming technique to guarantee output voltage accuracy within $\pm 2\%$.

BL8553 is available in SOT-89-3、SOT-23-3、SOT-23-5 packages which is lead free , it also can available in these packages with lead.

Explanation :

BL8553 is a series of low dropout voltage and low power consumption three pins regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

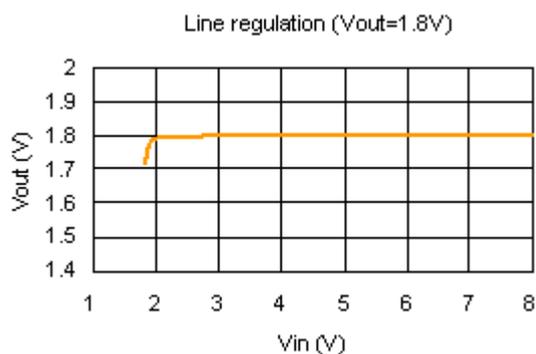

Current Limit module can keep chip and power system away from danger when load current is more than 400mA.

BL8553 uses trimming technique to assure the accuracy of output value within $\pm 2\%$, at the same time, temperature compensated is elaborately considered in this chip, which makes BL8553's temperature coefficient within 50ppm/°C.
