

0.39 Ω , Low-R_{ON}, Ultra-Low Distortion, Compact DPDT Analog Switch

DESCRIPTION

The DG2751 is a compact, low resistance, ultra-low distortion double pole double throw (DPST) analog switch.

The DG2751 features a flat 0.39 Ω ON resistance over the analog signal range from (V+) - 5.5 V to V+, supporting bi-directional negative signal swing. The design brings superior signal fidelity by eliminating the distortion caused by double hump switch resistance character of conventional analog switches.

The DG2751 operates over a voltage range from 3 V to 5.5 V. Because of its low current consumption, it can be powered directly by a GPIO. When V+ power is off, all switch pins are of high impedance mode.

Shunt switches are integrated at normally close (NOn) channels to discharge the AC-coupling capacitance at the terminals.

The part is controlled by a single bit, S, which can interface with 1.2 V low voltage I/O. Switch ON/OFF is of break-before-make (BBM).

The DG2751 is available in ultra-compact 1.2 mm x 1.2 mm, 9-bump WCSP package, and operate over the -40 °C to +85 °C extended temperature range.

FEATURES

- 2.3 V to 5.5 V single supply operation
- Low resistance: 0.39 Ω / typ. at 2.7 V
- Highly flat and matched R_{ON}
- Low parasitic capacitance, C_{ON} = 31 pF, C_{OFF} = 30 pF
- High bandwidth: 290 MHz
- Guaranteed logic high 1.2 V, logic low 0.3 V
- · Break before make switching
- Signal swing over V+ capable
- Power down protection
- Latch up current: 300 mA (JESD78)
- ESD/HBM: > 8 kV
- Material categorization: for definitions of compliance please see <u>www.vishav.com/doc?99912</u>

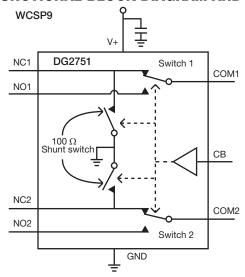

APPLICATIONS

- Applications
- · Smart phones
- Tablets
- Portable media players
- Headphones
- Audio / video equipment
- Low-distortion signal switches
- Digital cameras
- · Docking devices

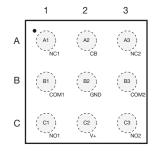

BENEFITS

- · Low and flat resistance
- Excellent total harmonic distortion
- Low parasitic capacitance
- Low voltage control interface

TRUTH TABLE				
СВ	FUNCTION			
0	COMx is connected to NCx			
1	COMx is connected to NOx, NCx is connected to shunt resistor			

ORDERING INFORMATION					
PART NUMBER	PACKAGE MARKING CODE TEMP		TEMPERATURE RANGE	STANDARD PACKAGING QUANTITY	
DG2751DB-T2-GE1	WCSP9	AB	-40 °C to +85 °C lead (Pb)-free	Tape and reel 3000 units	

PIN DESCRIPTION				
PIN	NAME	FUNCTION		
A1	NC1	Normally close terminal for switch 1		
A2	СВ	Logic control input. Drive CB low to connect COMx to NCx. Drive CB high to connect COMx to NOx.		
A3	NC2	Normally closed terminal for switch 2		
B1	COM1	Common terminal for switch 1		
B2	GND	Ground		
В3	COM2	Common terminal for switch 2		
C1	NO1	Normally open terminal for switch 1		
C2	V+	Device power supply input. Bypass V+ to GND with a 0.1 μ capacitor as close to the pin as possible		
C3	NO2	Normally open terminal for switch 2		

ABSOLUTE MAXIMUM RATINGS (T _A = 25 °C, unless otherwise noted)				
PARAMETER		LIMIT	UNIT	
Reference to GND	V+, IN	-0.3 to 6	V	
neierence to GND	COM, NO, NC a	(V+) - 5.5 to $(V++0.3)$	v	
Current (any terminal except COM, NO, NC, IN)		30		
Continuous Current (COM, NO, NC, IN)		± 250	mA	
Peak Current (pulsed at 1 ms, 10 % duty cycle)		± 500		
Storage Temperature (D suffix)		-65 to +150	°C	
Power Dissipation (packages) b WCSP9-40 c		963	mW	
Junction-to-Ambient Thermal Resistance (θ _{JA})		83	°C/W	
ESD (human body model) I/O to GND		8	kV	
Latch-Up (per JESD78)		400	mA	

Notes

- a. Signals on COM, NO, NC, exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- b. All leads welded or soldered to PC board.
- c. Derate 12 mW/°C above 70 °C.
- d. Package thermal resistances were obtained using the method described in JEDEC® specification JESD51-7.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

- a. Room = 25 °C, Full = as determined by the operating suffix.
 b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Typical values are for design aid only, not guaranteed nor subject to production testing.
- Guarantee by design, not subjected to production test.
- e. V_{IN} = input voltage to perform proper function. f. Crosstalk measured between channels.
- g. When NC is off, NC is connected to the 100 Ω shunt resistor.
