Sub-1 GHz (433, 868 or 915 MHz) programmable transceiver module

Datasheet - production data

Applications

- AMR (automatic meter reading)
- Home and building automation
- WSN (wireless sensor network)
- Industrial monitoring and control
- Wireless fire and security alarm systems
- Point-to-point wireless link
- 6LoWPAN MESH network
- Wireless M-Bus protocol stack

Description

The SPSGRFC is an easy-to-use sub-1 GHz transceiver certified module with many programmable features. The module provides a complete RF platform in a tiny form factor. The module can operate at the 433, 868 or 915 MHz frequency band, SPSGRFC-433, SPSGRFC-868 and SPSGRFC-915, respectively.

The SPSGRFC RF module is CE, FCC and IC certified and integrates wireless connectivity in target electronic devices without requiring particular RF experience or expertise. This certified solution optimizes the time to market of the final applications.

The module is designed for maximum performance in a minimal space, with 4 programmable I/O pins and an SPI serial interface.

The SPSGRFC is pin to pin and firmware compatible with SPSGRF family.

Features

- Based on the SPIRIT1 very low power RF sub-1 GHz transceiver
- Programmable radio features
    - Modulation schemes: 2-FSK, GFSK, MSK, GMSK, OOK, ASK
    - Air data rate from 1 to 500 kbps
    - On-board U.FL connector for external antenna
    - Operating temperature range from - 40 °C to 85 °C
- RF features
    - Receiver sensitivity: -118 dBm
    - Programmable RF output power up to +11.6 dBm
- Host interface
    - SPI
- General I/O
    - Up to 32 programmable I/O functions on 4 GPIO programmable module pins
- Three carrier frequency versions
    - 433 MHz for externally tuned antenna
    - 868 MHz for externally tuned antenna
    - 915 MHz for externally tuned antenna
- Dimensions: 11.5 x 13.5 x 2.0 mm

2 SPSGRFC module functional behavior

The SPIRIT1 device inside the SPSGRFC module has a built-in main controller which controls the switching between the two main operating modes: transmit (TX) and receive (RX).

In the SHUTDOWN condition, the SPSGRFC module can be switched on or off with the external SDN pin, all other functions, registers and commands are available through the SPI interface and GPIOs. No internal supply is generated (to minimize battery leakage), so all stored data and configurations are lost.

The GPIO and SPI ports of the module during SHUTDOWN are a hi-Z state. From SHUTDOWN, the SDN pin can switch the SPSGRFC module on, bringing it to the default READY state, where the reference signal from XO is available.

From the READY state, the SPSGRFC module can be moved to the LOCK state to generate the high precision LO signal and/or TX or RX modes. Switching from RX to TX and vice versa can only occur via the LOCK state. This operation is normally managed by radio control with a single user command (TX or RX).

The SPSGRFC module can then return to its default READY state and placed in the SLEEP state with very low power consumption. If no timeout is required, the SPSGRFC module can be moved from READY to STANDBY, which has the lowest possible current consumption while retaining FIFO, status and configuration registers. To manage the transitions to and from these operating modes, the controller works as a state machine manipulated by SPI commands.

3.1 Modules RF compliance limits

The RF compliance limits are those tested for FCC, IC and CE certification using the dedicated dongle (PC92A.V01). These limits are enforced by the dongle firmware. Care must be taken with custom application firmware to ensure these limits are not exceeded, voiding the FCC, IC and CE certification.

5   Hardware design

SPSGRFC module supports SPI hardware interfaces.

Precautions:

- All unused pins should be left floating; do not ground.
- All GND pins must be well grounded.
- The area around the module should be free of any ground planes, power planes, trace routings, or metal for 6 mm from the module antenna position, in all directions.
- Traces should not be routed underneath the module.

6 Reflow soldering

The SPSGRFC is a surface mount sub-1 GHz Transceiver module supplied on a 11 pin, 4-layer PCB. The final assembly recommended reflow profiles are indicated here below.

Soldering phase has to be executed with care: In order to avoid undesired melting phenomenon, particular attention has to be taken on the set up of the peak temperature.Here following some suggestions for the temperature profile based on IPC/JEDEC J-STD-020C, July 2004 recommendations.

Table 8: Soldering

Profile feature	Pb-free assembly
Average ramp up rate (T_{SMAX} to T_P)	3 °C / s max.

7   Module user firmware short description

For more user firmware information, please refer to the SPIRIT1 Datasheet on www.st.com.

The following notes provide a summarize the many programming options for the SPSGRFC-xxx module.

7.1   Register table

This section describes all the registers used to configure the SPIRIT1 device, assembled into the module.

The description is structured in sections according to the register usage.

SPIRIT1 has three types of registers:

- Read and write (R/W), which can be completely managed by SPI using READ and WRITE operations
- Read-only (R)
- Read-and-reset (RR), is automatically cleared after a READ operation

A further category of special registers collects the ones which cannot be categorized in anyof the three mentioned above R/W, R, or RR.

The fields named as "Reserved" must not be overridden by the user, otherwise, behavior isnot guaranteed.

The memory map is shown in the following table:

8   Regulatory compliance

8.1   RF compliance

The RF certifications obtained are described in table below.

Table 14: RF certification summary

ID	Part	Comment
FCC ID	S9NSPSGRFC	With external "TAOGLASS" antenna and UFL to SMA connector RF cable version
IC ID	8976C-SPSGRFC	With external "TAOGLASS" antenna and UFL to SMA connector RF cable version
ETSI	Compliant	Approved with external "LINX" antenna an d UFL to SMA cable version

This radio transmitter IC ID 8976-SPSGRFC has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain indicated.

Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

The "TI.19.2113" antenna from "TAOGLASS" is the only approved antenna using the u.fl connector version.

8.2   SPSGRFC-915 module approved antenna

For SPSGRFC-915, the approved antenna is the TAOGLASS TI.19.2113.

Below is an extract from the antenna datasheet: TI.19 is a high performance 915 MHz ISM band dipole omni-directional antenna.

The hinged design enables the antenna to be positioned at its most suitable angle. This antenna features a SMA(M) Plug Connector.

For a lot of antenna applications such as Wi-Fi Hotspot or cellular Pico-cell, the antenna of the operator's device and the antenna of the user's remote device are not on the same horizontal level. The TI.19 has been designed with a butterfly shape radiation pattern to help counteract this effect.

8.3 SPSGRFC-868 module approved antenna

For the SPSGRFC-868 module the approved antenna is the LINX ANT-868-CW-QW.
Below is an extract from the antenna datasheet:

Figure 7: SPSGRFC-868 antenna
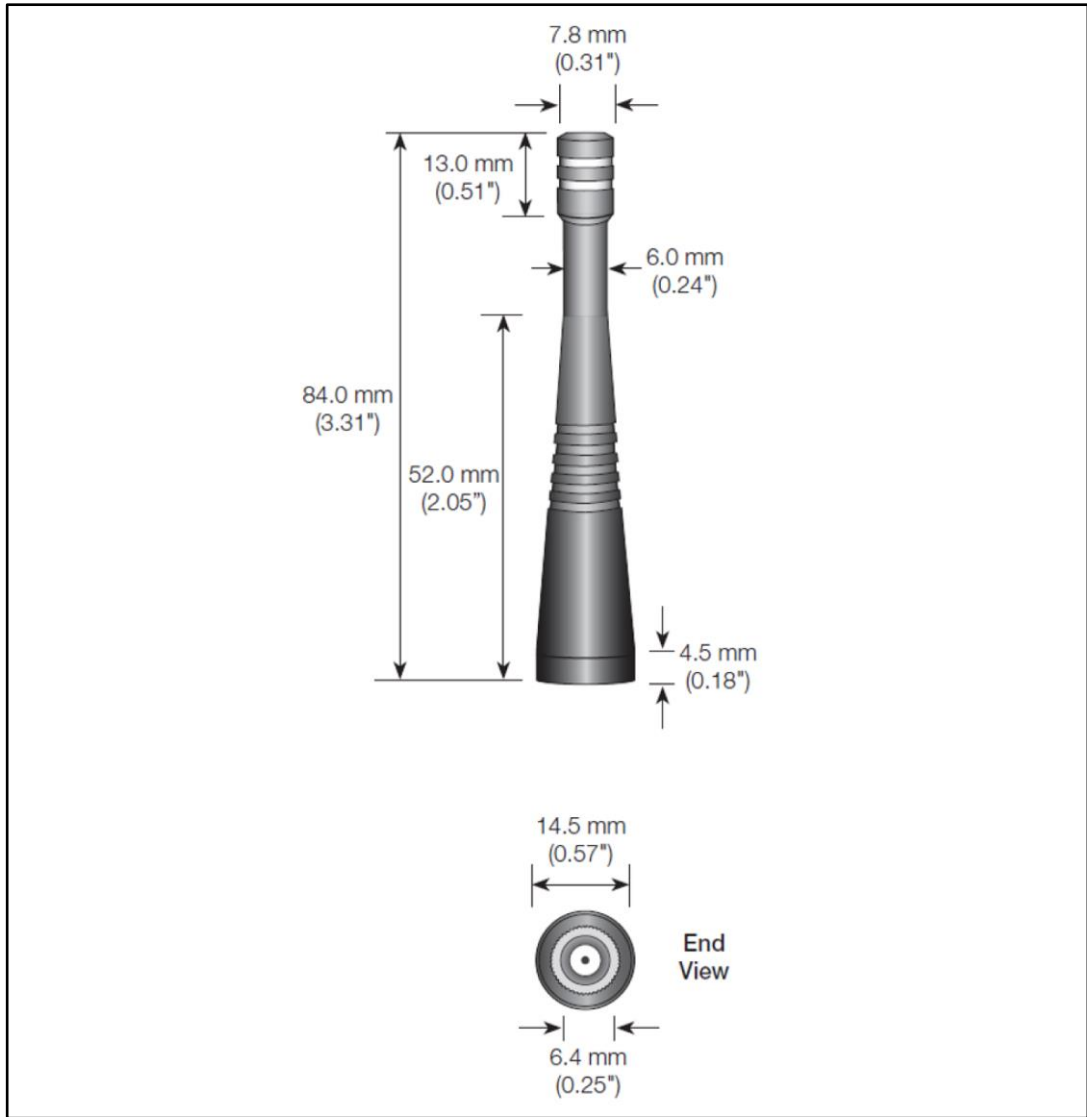

Table 16: Ordering information

Order code
ANT-868-CW-QW (with RP-SMA connector)
ANT-868-CW-QW-SMA (with SMA connector)

Product description

CW Series ¼-wave antennas deliver outstanding performance in a rugged and cosmetically attractive package. These antennas are available with standard SMA or FCC Part 15 compliant RP-SMA connectors. RP-SMA connectors allow for easy field replacement while complying with FCC requirements. A wide variety of matching connectors permit numerous mounting options.

Features

- Low cost
- Excellent performance
- Omni-directional pattern
- Wide bandwidth
- Very low VSWR
- Fully weatherized
- Flexible main shaft
- Rugged & damage-resistant
- SMA or Part 15 compliant RP-SMA connector
- Use with plastic (requires proximity ground plane) or metal enclosures

Electrical specifications

- Center frequency: 868 MHz
- Recom. freq. range: 750 - 950 MHz
- Wavelength: ¼-wave
- Peak gain: 1.6 dBi
- VSWR: < 1.9 typ. at center
- Impedance: 50 Ω
- Connector: RP-SMA or SMA
- Oper. temp. range: – 40 °C to + 90 °C
- Electrical specifications and plots measured on 10.16 cm x 10.16 cm (4.00" x 4.00") reference ground plane

8.4 SPSGRFC-433 module approved antenna

For the SPSGRFC-433 module the approved antenna is the LINX ANT-433-CW-QW.
Below is an extract from the antenna datasheet:

8.5 FCC and IC

The SPSGRFC-915 module has been tested and complies with the FCC part 15 and IC RSS-247 regulations. These limits are designed to provide reasonable protection against harmful interference in approved installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- The device must not cause harmful interference
  and
- The device must accept any interference received, including interference that may cause undesired operation

Modifications or changes to this equipment not expressly approved by the party responsible for compliance may render void the user's authority to operate this equipment.

Modular approval, FCC and IC

FCC ID: S9NSPSGRFC

IC: 8976C-SPSGRFC

In accordance with FCC part 15, the module SPSGRFC-915 is listed above as a modular transmitter device.

8.5.1 Labeling instructions

When integrating the SPSGRFC-915 into the final product, ensure that the FCC and IC labeling requirements specified below are satisfied. Based on the Public Notice from FCC, the product into which the ST transmitter module is installed must display a label referring to the enclosed module. The label should use wording like the following:

Contains transmitter module

- FCC ID: S9NSPSGRFC

- IC: 8976C-SPSGRFC

Any similar wording that expresses the same meaning may also be used.

8.6 CE Certification

The SPSGRFC-868 and SPSGRFC-433 have been certified according to the following certification rules:

– EN 300 328 V 2.1.1 (2016-11) (1)

– ETSI EN 301 489-17 V3.1.1 (2017-02) (2)

EN 300 328 V 2.1.1 (2016 11): "electromagnetic compatibility and radio spectrum Matters (ERM); Wideband transmission systems; data transmission equipment operating in the 2.4 GHZ ISM band and using wideband modulation techniques; harmonized EN covering essential requirements under article 3.2 of the R&TTE directive".
2. EN 301 489-17 V 3.1.1 (2017 02): "electromagnetic compatibility and radio spectrum Matters (ERM); electromagnetic compatibility (EMC) standard for radio equipment and services; part 17: specific condition for 2.4 GHz wideband transmission systems and 5 GHz high performance RLAN equipment".
3. ETSI EN 301 489-1 V2.1.1 (2017 02): "electromagnetic compatibility and radio spectrum Matters (ERM); electromagnetic compatibility (EMC) standard for radio equipment and services; part 1: Common technical requirements".
4. EN60950-1:2006 +A11:2009+A1:2010+A12:2011+A2:2013: "Information technology equipment - safety".

The modules are provided by CE marking:

Figure 9: CE marking
The modules have obtained the RED certificate: No. 0051-RED-0029 REV. 0"

The certified modules test platforms are based on STSW-SP1ML868AT production firmware release:

9   RoHS compliance

ST Bluetooth modules comply with the ECOPACK2 level of RoHS compliance grade.

10 Traceability

Each module is univocally identified by serial number stored in a 2D data matrix laser marked on the bottom side of the module itself.

The serial number has the following format:

WW YY D FF NNN

where

WW = week

YY = year

D = product ID family

FF = production panel coordinate identification

NNN = progressive serial number.

Each module bulk is identified by a bulk ID.

BULK ID and module 2D data matrix are linked by a reciprocal traceability link.

The module 2D data matrix traces the lot number of any raw material used.
