
8-bit Microcontroller with 16/32K bytes of ISP Flash and USB Controller

DATASHEET SUMMARY**Features**

- High Performance, Low Power AVR® 8-Bit Microcontroller
- Advanced RISC Architecture
 - 135 Powerful Instructions – Most Single Clock Cycle Execution
 - 32 x 8 General Purpose Working Registers
 - Fully Static Operation
 - Up to 16 MIPS Throughput at 16MHz
 - On-Chip 2-cycle Multiplier
- Non-volatile Program and Data Memories
 - 16/32KB of In-System Self-Programmable Flash
 - 1.25/2.5KB Internal SRAM
 - 512Bytes/1KB Internal EEPROM
 - Write/Erase Cycles: 10,000 Flash/100,000 EEPROM
 - Data retention: 20 years at 85°C/ 100 years at 25°C⁽¹⁾
 - Optional Boot Code Section with Independent Lock Bits
 - In-System Programming by On-chip Boot Program
 - True Read-While-Write Operation
 - Parts using external XTAL clock are pre-programmed with a default USB bootloader
 - Programming Lock for Software Security
- JTAG (IEEE® std. 1149.1 compliant) Interface
 - Boundary-scan Capabilities According to the JTAG Standard
 - Extensive On-chip Debug Support
 - Programming of Flash, EEPROM, Fuses, and Lock Bits through the JTAG Interface
- USB 2.0 Full-speed/Low Speed Device Module with Interrupt on Transfer Completion
 - Complies fully with Universal Serial Bus Specification Rev 2.0
 - Supports data transfer rates up to 12Mbit/s and 1.5Mbit/s
 - Endpoint 0 for Control Transfers: up to 64-bytes
 - Six Programmable Endpoints with IN or Out Directions and with Bulk, Interrupt or Isochronous Transfers
 - Configurable Endpoints size up to 256 bytes in double bank mode
 - Fully independent 832 bytes USB DPRAM for endpoint memory allocation
 - Suspend/Resume Interrupts
 - CPU Reset possible on USB Bus Reset detection
 - 48MHz from PLL for Full-speed Bus Operation
 - USB Bus Connection/Disconnection on Microcontroller Request
 - Crystal-less operation for Low Speed mode
- Peripheral Features
 - On-chip PLL for USB and High Speed Timer: 32 up to 96MHz operation
 - One 8-bit Timer/Counter with Separate Prescaler and Compare Mode

- Two 16-bit Timer/Counter with Separate Prescaler, Compare- and Capture Mode
- One 10-bit High-Speed Timer/Counter with PLL (64MHz) and Compare Mode
- Four 8-bit PWM Channels
- Four PWM Channels with Programmable Resolution from 2 to 16 Bits
- Six PWM Channels for High Speed Operation, with Programmable Resolution from 2 to 11 Bits
- Output Compare Modulator
- 12-channels, 10-bit ADC (features Differential Channels with Programmable Gain)
- Programmable Serial USART with Hardware Flow Control
- Master/Slave SPI Serial Interface
- Byte Oriented 2-wire Serial Interface
- Programmable Watchdog Timer with Separate On-chip Oscillator
- On-chip Analog Comparator
- Interrupt and Wake-up on Pin Change
- On-chip Temperature Sensor
- **Special Microcontroller Features**
 - Power-on Reset and Programmable Brown-out Detection
 - Internal 8MHz Calibrated Oscillator
 - Internal clock prescaler and On-the-fly Clock Switching (Int RC / Ext Osc)
 - External and Internal Interrupt Sources
 - Six Sleep Modes: Idle, ADC Noise Reduction, Power-save, Power-down, Standby, and Extended Standby
- **I/O and Packages**
 - All I/O combine CMOS outputs and LVTTTL inputs
 - 26 Programmable I/O Lines
 - 44-lead TQFP Package, 10x10mm
 - 44-lead QFN Package, 7x7mm
- **Operating Voltages**
 - 2.7 - 5.5V
- **Operating temperature**
 - Industrial (-40°C to +85°C)
- **Maximum Frequency**
 - 8MHz at 2.7V - Industrial range
 - 16MHz at 4.5V - Industrial range

Note: 1. See [“Data Retention”](#) on page 8 for details.

1. Pin Configurations

Figure 1-1. Pinout

2. Overview

The [ATmega16U4/ATmega32U4](#) is a low-power CMOS 8-bit microcontroller based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the device achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

2.1 Block Diagram

Figure 2-1. Block Diagram

The AVR core combines a rich instruction set with 32 general purpose working registers. All the 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The device provides the following features: 16/32K bytes of In-System Programmable Flash with Read-While-Write capabilities, 512Bytes/1K bytes EEPROM, 1.25/2.5K bytes SRAM, 26 general purpose I/O lines (CMOS outputs and LVTTTL inputs), 32 general purpose working registers, four flexible Timer/Counters with compare modes and PWM, one more high-speed Timer/Counter with compare modes and PLL adjustable source, one USART (including CTS/RTS flow control signals), a byte oriented 2-wire Serial Interface, a 12-channels 10-bit ADC with optional differential input stage with programmable gain, an on-chip calibrated temperature sensor, a programmable Watchdog Timer with Internal Oscillator, an SPI serial port, IEEE std. 1149.1 compliant JTAG test interface, also used for accessing the On-chip Debug system and programming and six software selectable

power saving modes. The Idle mode stops the CPU while allowing the SRAM, Timer/Counters, SPI port, and interrupt system to continue functioning. The Power-down mode saves the register contents but freezes the Oscillator, disabling all other chip functions until the next interrupt or Hardware Reset. The ADC Noise Reduction mode stops the CPU and all I/O modules except ADC, to minimize switching noise during ADC conversions. In Standby mode, the Crystal/Resonator Oscillator is running while the rest of the device is sleeping. This allows very fast start-up combined with low power consumption.

The device is manufactured using the Atmel[®] high-density nonvolatile memory technology. The On-chip ISP Flash allows the program memory to be reprogrammed in-system through an SPI serial interface, by a conventional nonvolatile memory programmer, or by an On-chip Boot program running on the AVR core. The boot program can use any interface to download the application program in the application Flash memory. Software in the Boot Flash section will continue to run while the Application Flash section is updated, providing true Read-While-Write operation. By combining an 8-bit RISC CPU with In-System Self-Programmable Flash on a monolithic chip, the device is a powerful microcontroller that provides a highly flexible and cost effective solution to many embedded control applications.

The [ATmega16U4/ATmega32U4](#) AVR is supported with a full suite of program and system development tools including: C compilers, macro assemblers, program debugger/simulators, in-circuit emulators, and evaluation kits.

2.2 Pin Descriptions

2.2.1 VCC

Digital supply voltage.

2.2.2 GND

Ground.

2.2.3 Port B (PB7..PB0)

Port B is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port B has better driving capabilities than the other ports.

Port B also serves the functions of various special features of the device as listed on page 74.

2.2.4 Port C (PC7,PC6)

Port C is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port C output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port C pins that are externally pulled low will source current if the pull-up resistors are activated. The Port C pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Only bits 6 and 7 are present on the product pinout.

Port C also serves the functions of special features of the device as listed on page 77.

2.2.5 Port D (PD7..PD0)

Port D is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port D output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port D pins that are externally pulled low will source current if the pull-up resistors are activated. The Port D pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port D also serves the functions of various special features of the [ATmega16U4/ATmega32U4](#) as listed on page 78.

2.2.6 Port E (PE6,PE2)

Port E is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port E output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port E pins that are externally pulled low will source current if the pull-up resistors are activated. The Port E pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Only bits 2 and 6 are present on the product pinout.

Port E also serves the functions of various special features of the [ATmega16U4/ATmega32U4](#) as listed on page 81.

2.2.7 Port F (PF7..PF4, PF1,PF0)

Port F serves as analog inputs to the A/D Converter.

Port F also serves as an 8-bit bi-directional I/O port, if the A/D Converter channels are not used. Port pins can provide internal pull-up resistors (selected for each bit). The Port F output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port F pins that are externally pulled low will source current if the pull-up resistors are activated. The Port F pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Bits 2 and 3 are not present on the product pinout.

Port F also serves the functions of the JTAG interface. If the JTAG interface is enabled, the pull-up resistors on pins PF7(TDI), PF5(TMS), and PF4(TCK) will be activated even if a reset occurs.

2.2.8 D-

USB Full speed / Low Speed Negative Data Upstream Port. Should be connected to the USB D- connector pin with a serial 22Ω resistor.

2.2.9 D+

USB Full speed / Low Speed Positive Data Upstream Port. Should be connected to the USB D+ connector pin with a serial 22Ω resistor.

2.2.10 UGND

USB Pads Ground.

2.2.11 UVCC

USB Pads Internal Regulator Input supply voltage.

2.2.12 UCAP

USB Pads Internal Regulator Output supply voltage. Should be connected to an external capacitor (1μF).

2.2.13 VBUS

USB VBUS monitor input.

2.2.14 RESET

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running. The minimum pulse length is given in [Table 8-2 on page 53](#). Shorter pulses are not guaranteed to generate a reset.

2.2.15 XTAL1

Input to the inverting Oscillator amplifier and input to the internal clock operating circuit.

2.2.16 XTAL2

Output from the inverting Oscillator amplifier.

2.2.17 AVCC

AVCC is the supply voltage pin (input) for all the A/D Converter channels. If the ADC is not used, it should be externally connected to V_{CC} . If the ADC is used, it should be connected to V_{CC} through a low-pass filter.

2.2.18 AREF

This is the analog reference pin (input) for the A/D Converter.

3. About

3.1 Disclaimer

Typical values contained in this datasheet are based on simulations and characterization of other AVR microcontrollers manufactured on the same process technology. Min. and Max. values will be available after the device is characterized.

3.2 Resources

A comprehensive set of development tools, application notes and datasheets are available for download on <http://www.atmel.com/avr>.

3.3 Code Examples

This documentation contains simple code examples that briefly show how to use various parts of the device. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent. Confirm with the C compiler documentation for more details.

These code examples assume that the part specific header file is included before compilation. For I/O registers located in extended I/O map, "IN", "OUT", "SBIS", "SBIC", "CBI", and "SBI" instructions must be replaced with instructions that allow access to extended I/O. Typically "LDS" and "STS" combined with "SBRS", "SBRC", "SBR", and "CBR".

3.4 Data Retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1PPM over 20 years at 85°C or 100 years at 25°C.

4. Register Summary

| Address | Name | Bit 7 | Bit 6 | Bit 5 | Bit 4 | Bit 3 | Bit 2 | Bit 1 | Bit 0 | Page |

- Note:
1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
 2. I/O registers within the address range \$00 - \$1F are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
 3. Some of the status flags are cleared by writing a logical one to them. Note that the CBI and SBI instructions will operate on all bits in the I/O register, writing a one back into any flag read as set, thus clearing the flag. The CBI and SBI instructions work with registers 0x00 to 0x1F only.
 4. When using the I/O specific commands IN and OUT, the I/O addresses \$00 - \$3F must be used. When addressing I/O registers as data space using LD and ST instructions, \$20 must be added to these addresses. The [ATmega16U4/ATmega32U4](#) is a complex microcontroller with more peripheral units than can be supported within the 64 location reserved in Opcode for the IN and OUT instructions. For the Extended I/O space from \$60 - \$1FF in SRAM, only the ST/STS/STD and LD/LDS/LDD instructions can be used.

5. Instruction Set Summary

| Mnemonics | Operands | Description | Operation | Flags | #Clocks |
|-----------------------------------|----------|--|---|------------|---------|
| ARITHMETIC AND LOGIC INSTRUCTIONS | | | | | |
| ADD | Rd, Rr | Add two Registers | $Rd \leftarrow Rd + Rr$ | Z,C,N,V,H | 1 |
| ADC | Rd, Rr | Add with Carry two Registers | $Rd \leftarrow Rd + Rr + C$ | Z,C,N,V,H | 1 |
| ADIW | RdI,K | Add Immediate to Word | $Rdh:Rdl \leftarrow Rdh:Rdl + K$ | Z,C,N,V,S | 2 |
| SUB | Rd, Rr | Subtract two Registers | $Rd \leftarrow Rd - Rr$ | Z,C,N,V,H | 1 |
| SUBI | Rd, K | Subtract Constant from Register | $Rd \leftarrow Rd - K$ | Z,C,N,V,H | 1 |
| SBC | Rd, Rr | Subtract with Carry two Registers | $Rd \leftarrow Rd - Rr - C$ | Z,C,N,V,H | 1 |
| SBCI | Rd, K | Subtract with Carry Constant from Reg. | $Rd \leftarrow Rd - K - C$ | Z,C,N,V,H | 1 |
| SBIW | RdI,K | Subtract Immediate from Word | $Rdh:Rdl \leftarrow Rdh:Rdl - K$ | Z,C,N,V,S | 2 |
| AND | Rd, Rr | Logical AND Registers | $Rd \leftarrow Rd \bullet Rr$ | Z,N,V | 1 |
| ANDI | Rd, K | Logical AND Register and Constant | $Rd \leftarrow Rd \bullet K$ | Z,N,V | 1 |
| OR | Rd, Rr | Logical OR Registers | $Rd \leftarrow Rd \vee Rr$ | Z,N,V | 1 |
| ORI | Rd, K | Logical OR Register and Constant | $Rd \leftarrow Rd \vee K$ | Z,N,V | 1 |
| EOR | Rd, Rr | Exclusive OR Registers | $Rd \leftarrow Rd \oplus Rr$ | Z,N,V | 1 |
| COM | Rd | One's Complement | $Rd \leftarrow 0xFF - Rd$ | Z,C,N,V | 1 |
| NEG | Rd | Two's Complement | $Rd \leftarrow 0x00 - Rd$ | Z,C,N,V,H | 1 |
| SBR | Rd,K | Set Bit(s) in Register | $Rd \leftarrow Rd \vee K$ | Z,N,V | 1 |
| CBR | Rd,K | Clear Bit(s) in Register | $Rd \leftarrow Rd \bullet (0xFF - K)$ | Z,N,V | 1 |
| INC | Rd | Increment | $Rd \leftarrow Rd + 1$ | Z,N,V | 1 |
| DEC | Rd | Decrement | $Rd \leftarrow Rd - 1$ | Z,N,V | 1 |
| TST | Rd | Test for Zero or Minus | $Rd \leftarrow Rd \bullet Rd$ | Z,N,V | 1 |
| CLR | Rd | Clear Register | $Rd \leftarrow Rd \oplus Rd$ | Z,N,V | 1 |
| SER | Rd | Set Register | $Rd \leftarrow 0xFF$ | None | 1 |
| MUL | Rd, Rr | Multiply Unsigned | $R1:R0 \leftarrow Rd \times Rr$ | Z,C | 2 |
| MULS | Rd, Rr | Multiply Signed | $R1:R0 \leftarrow Rd \times Rr$ | Z,C | 2 |
| MULSU | Rd, Rr | Multiply Signed with Unsigned | $R1:R0 \leftarrow Rd \times Rr$ | Z,C | 2 |
| FMUL | Rd, Rr | Fractional Multiply Unsigned | $R1:R0 \leftarrow (Rd \times Rr) \ll 1$ | Z,C | 2 |
| FMULS | Rd, Rr | Fractional Multiply Signed | $R1:R0 \leftarrow (Rd \times Rr) \ll 1$ | Z,C | 2 |
| FMULSU | Rd, Rr | Fractional Multiply Signed with Unsigned | $R1:R0 \leftarrow (Rd \times Rr) \ll 1$ | Z,C | 2 |
| BRANCH INSTRUCTIONS | | | | | |
| RJMP | k | Relative Jump | $PC \leftarrow PC + k + 1$ | None | 2 |

6. Ordering Information

6.1 ATmega16U4

| Speed [MHz] | Power Supply | Ordering Code | Default Oscillator | Package | Operation Range |
|-------------|--------------|------------------------------|--------------------|---------|----------------------------|
| 16 | 2.7 - 5.5V | ATmega16U4-AU | External XTAL | 44ML | Industrial (-40° to +85°C) |
| | | ATmega16U4RC-AU | Internal Calib. RC | | |
| | | ATmega16U4-MU (1)(2)(3) | External XTAL | 44PW | |
| | | ATmega16U4RC-MU (1)(2)(3) | Internal Calib. RC | | |

- Notes:
1. For more information on running the USB from internal RC oscillator consult application note AVR291: 8MHz Internal Oscillator Calibration for USB Low Speed on Atmel ATmega32U4RC.
 2. USB operation from internal RC oscillator is only guaranteed for 0°C to 40°C.
 3. These parts are shipped with no USB bootloader pre-programmed.

| Package Type | |
|--------------|---|
| 44ML | ML, 44 - Lead, 10 x 10mm Body Size, 1.0mm Body Thickness 0.8mm Lead Pitch, Thin Profile Plastic Quad Flat Package (TQFP) |
| 44PW | PW, 44 - Lead 7.0 x 7.0mm Body, 0.50mm Pitch Quad Flat No Lead Package (QFN) |

6.2 ATmega32U4

| Speed [MHz] | Power Supply | Ordering Code | Default Oscillator | Package | Operation Range |
|-------------|--------------|--------------------------------------|--------------------|---------|----------------------------|
| 16 | 2.7 - 5.5V | ATmega32U4-AU | External XTAL | 44ML | Industrial (-40° to +85°C) |
| | | ATmega32U4RC-AU | Internal Calib. RC | | |
| | | ATmega32U4-MU ⁽¹⁾⁽²⁾⁽³⁾ | External XTAL | 44PW | |
| | | ATmega32U4RC-MU ⁽¹⁾⁽²⁾⁽³⁾ | Internal Calib. RC | | |

- Notes:
1. For more information on running the USB from internal RC oscillator consult application note AVR291: 8MHz Internal Oscillator Calibration for USB Low Speed on Atmel ATmega32U4RC.
 2. USB operation from internal RC oscillator is only guaranteed for 0°C to 40°C.
 3. These parts are shipped with no USB bootloader pre-programmed.

| Package Type | |
|--------------|---|
| 44ML | ML, 44 - Lead, 10 x 10mm Body Size, 1.0mm Body Thickness 0.8mm Lead Pitch, Thin Profile Plastic Quad Flat Package (TQFP) |
| 44PW | PW, 44 - Lead 7.0 x 7.0mm Body, 0.50mm Pitch Quad Flat No Lead Package (QFN) |

| A1 | ---- | 0.02 | 0.05 | |
| A3 | 0.20 REF | | | |
| D/E | 6.90 | 7.00 | 7.10 | |
| D2/E2 | 5.00 | 5.20 | 5.40 | |
| L | 0.45 | 0.55 | 0.65 | |
| K | ---- | 0.35 | ---- | |
| b | 0.18 | 0.23 | 0.30 | 2 |
| e | 0.50 BSC | | | |
| n | 44 | | | |

- Notes : 1. This drawing is for general information only. Refer to JEDEC Drawing MO-220, Variation VKKD-1 for proper dimensions, tolerances, datums, etc.
 2. Dimension b applies to metallized terminal and is measured between 0.15mm and 0.30mm from the terminal tip.
 If the terminal has the optical radius on the other end of the terminal, the dimension should not be measured in that radius area.

8. Errata

The revision letter in this section refers to the revision of the [ATmega16U4/ATmega32U4](#) device.

8.1 [ATmega16U4/ATmega32U4 Rev E](#)

- Spike on TWI pins when TWI is enabled
- High current consumption in sleep mode
- MSB of OCR4A/B/D is write only in 11-bits enhanced PWM mode

1. Spike on TWI pins when TWI is enabled

100 ns negative spike occurs on SDA and SCL pins when TWI is enabled.

Problem Fix/work around

Enable ATmega16U4/ATmega32U4 TWI before the other nodes of the TWI network.

2. High current consumption in sleep mode

If a pending interrupt cannot wake the part up from the selected mode, the current consumption will increase during sleep when executing the SLEEP instruction directly after a SEI instruction.

Problem Fix/work around

Before entering sleep, interrupts not used to wake up the part from the sleep mode should be disabled.

3. MSB of OCR4A/B/D is write only in 11-bits enhanced PWM mode

In the 11-bits enhanced PWM mode the MSB of OCR4A/B/D is write only. A read of OCR4A/B/D will always return zero in the MSB position.

Problem Fix/work around

None.

8.2 [ATmega16U4/ATmega32U4 Rev D](#)

- Spike on TWI pins when TWI is enabled
- High current consumption in sleep mode
- Timer 4 11-bits enhanced PWM mode

1. Spike on TWI pins when TWI is enabled

100 ns negative spike occurs on SDA and SCL pins when TWI is enabled.

Problem Fix/work around

Enable ATmega16U4/ATmega32U4 TWI before the other nodes of the TWI network.

2. High current consumption in sleep mode

If a pending interrupt cannot wake the part up from the selected mode, the current consumption will increase during sleep when executing the SLEEP instruction directly after a SEI instruction.

Problem Fix/work around

Before entering sleep, interrupts not used to wake up the part from the sleep mode should be disabled.

3. Timer 4 11-bits enhanced PWM mode

Timer 4 11-bits enhanced mode is not functional.

Problem Fix/work around

None.

8.3 ATmega16U4/ATmega32U4 Rev C

Not sampled

8.4 ATmega16U4/ATmega32U4 Rev B

- Spike on TWI pins when TWI is enabled
- High current consumption in sleep mode
- Incorrect execution of VBUSTI interrupt
- Timer 4 11-bits enhanced PWM mode

1. Spike on TWI pins when TWI is enabled

100 ns negative spike occurs on SDA and SCL pins when TWI is enabled.

Problem Fix/work around

Enable ATmega16U4/ATmega32U4 TWI before the other nodes of the TWI network.

2. High current consumption in sleep mode

If a pending interrupt cannot wake the part up from the selected mode, the current consumption will increase during sleep when executing the SLEEP instruction directly after a SEI instruction.

Problem Fix/work around

Before entering sleep, interrupts not used to wake up the part from the sleep mode should be disabled.

3. Incorrect execution of VBUSTI interrupt

The CPU may incorrectly execute the interrupt vector related to the VBUSTI interrupt flag.

Problem fix/work around

Do not enable this interrupt. Firmware must process this USB event by polling VBUSTI.

4. Timer 4 11-bits enhanced PWM mode

Timer 4 11-bits enhanced mode is not functional.

Problem Fix/work around

None.

8.5 ATmega16U4/ATmega32U4 Rev A

- Spike on TWI pins when TWI is enabled
- High current consumption in sleep mode
- Increased power consumption in power-down mode
- Internal RC oscillator start up may fail
- Internal RC oscillator calibration
- Incorrect execution of VBUSTI interrupt
- Timer 4 enhanced mode issue

1. Spike on TWI pins when TWI is enabled

100 ns negative spike occurs on SDA and SCL pins when TWI is enabled.

Problem Fix/work around

Enable ATmega16U4/ATmega32U4 TWI before the other nodes of the TWI network.

2. High current consumption in sleep mode

If a pending interrupt cannot wake the part up from the selected mode, the current consumption will increase during sleep when executing the SLEEP instruction directly after a SEI instruction.

Problem Fix/work around

Before entering sleep, interrupts not used to wake up the part from the sleep mode should be disabled.

3. Increased power consumption in power-down mode

The typical power consumption is increased by about 30 μ A in power-down mode.

Problem Fix/work around

None.

4. Internal RC oscillator start up may fail

When the part is configured to start on internal RC oscillator, the oscillator may not start properly after power-on.

Problem Fix/work around

Do not configure the part to start on internal RC oscillator.

5. Internal RC oscillator calibration

8 MHz frequency can be impossible to reach with internal RC even when using maximal OSCAL value.

Problem Fix/work around

None.

6. Incorrect execution of VBUSTI interrupt

The CPU may incorrectly execute the interrupt vector related to the VBUSTI interrupt flag.

Problem fix/work around

Do not enable this interrupt. Firmware must process this USB event by polling VBUSTI.

7. Timer 4 11-bits enhanced PWM mode

Timer 4 11-bits enhanced mode is not functional.

Problem Fix/work around

None.

9. Datasheet Revision History for ATmega16U4/ATmega32U4

Note that the referring page numbers in this section are referred to this document. The referring revision in this section are referring to the document revision.

9.1 Rev. 7766J – 04/2016

1. [“Memory Programming” on page 353](#): Updated number of words in a page and number of pages in the Flash and EEPROM for ATmega16U4 and ATmega32U4. Refer to [Table 28-11](#) and [Table 28-12 on page 359](#).

9.2 Rev. 7766I – 07/2015

1. Applied Atmel brands throughout the contents and reorganized the contents.
2. Updated [“Power Management and Sleep Modes” on page 43](#). Part of contents was missing.

9.3 Rev. 7766H – 06/2014

1. The first section in [“Phase and Frequency Correct PWM Mode” on page 154](#) has been corrected.
2. Several corrections are made according to the new template.
3. Trademarks are added to the last page.
4. Removed preliminary on the front page
5. Updated with new datasheet template from 05-2014
6. Updated description of parts pre-programmed with a default USB bootloader in Features on page 2.
7. Added three footnotes for the RC part numbers in [Section 6., “Ordering Information” on page 16](#).
8. Removed footnote on Frequency range in [Table 6-3 on page 30](#) and [Table 6-7 on page 32](#).
9. Updated values and removed footnote in [Table 8-3 on page 55](#).
10. Removed column $V_{CC}=1.5 - 5.5V$ in [Table 29-2 on page 385](#).
11. Changed footnote for [Table 29-2 on page 385](#).
12. Added max value for Rise/Fall time in [Table 29-4 on page 387](#).

9.4 Rev. 7766G – 02/2014

1. Updated the “Description” on page 177 of the “Output Compare Modulator (OCM1C0A)” . Specified when the logical AND and the logical OR will be performed based on the PORTB7.
2. Updated “USART Control and Status Register n D– UCSRnD” on page 213. “Bits 7:2 - Reserved” are Read only.
3. Updated “Crystal-less Operation” on page 259. The temperature range changed to “within the 0°C and +40°C.
4. MUX bit in “ADC Control and Status Register B – ADCSRB” on page 294 changed to R/W.
5. Updated Table 24-6 on page 318. Trigger Source: Timer/Counter0 Compare Match updated to Timer/Counter0 Compare Match A.
6. Updated “DC Characteristics” on page 383. Added Active 16MHz, $V_{CC} = 5V$, max. 27mA, in “Icc / Power supply current”.
7. Updated “Register Summary” on page 9. Added UCSRnD at the address CBh.
8. Replaced the “TQFP44” on page 18 and “QFN44” on page 19 by updated package drawings.
9. Updated the last page according to Atmel new Brand Style Guide (new logo).

9.5 Rev. 7766F – 11/10

1. Replaced the “QFN44” on page 19 by an updated drawing.
2. Updated “ADC Control and Status Register B – ADCSRB” on page 294. Defined the ADCSRB register as in “ADC Control and Status Register B – ADCSRB” on page 317.
3. Updated the last page according to Atmel new Brand Style Guide.

9.6 Rev. 7766E – 04/10

1. Updated “Features” on page 1.
2. Updated “Features” on page 256.
3. Updated Figure 21-9 on page 261.
4. Updated Section 21.8 on page 263.
5. Updated “Features” on page 297.
6. Updated “Boundary-scan Order” on page 332.
7. Updated “Program And Data Memory Lock Bits” on page 353.
8. Updated Table 28-5 on page 355.
9. Updated “Electrical Characteristics” on page 383.
10. Updated Figure 29-2 on page 386.

11. Added [“Typical Characteristics”](#) on page 392.
12. Updated [“Ordering Information”](#) on page 16.
13. Updated [“Errata”](#) on page 21.

9.7 Rev. 7766D – 01/09

1. Updated Memory section in [“Features”](#) on page 1.
2. Added section [“Resources”](#) on page 8.
3. Added section [“Data Retention”](#) on page 8.
4. Updated [“Ordering Information”](#) on page 16.

9.8 Rev. 7766C – 11/08

1. Updated Memory section in [“Features”](#) on page 1.

9.9 Rev. 7766B – 11/08

1. Added ATmega16U4 device.
2. Created errata section and added ATmega16U4.
3. Updated High Speed Timer, asynchronous description [Section 15. on page 139](#)

9.10 Rev. 7766A – 07/08

1. Initial revision
