

## CMOS – Low-Power, Slew-Rate-Limited RS-485/RS-422 Transceivers

### GENERAL DESCRIPTION

The HT6582 is low-power transceivers for RS-485 and RS-422 communication. IC contains one driver and one receiver. The driver slew rates of the HT6582 is not limited, allowing them to transmit up to 2.5Mbps. These transceivers draw between 120 $\mu$ A and 500 $\mu$ A of supply current when unloaded or fully loaded with disabled drivers. All parts operate from a single 5V supply. Drivers are short-circuit current limited and are protected against excessive power dissipation by thermal shutdown circuitry that places the driver outputs into a high-impedance state. The receiver input has a fail-safe feature that guarantees a logic-high output if the input is open circuit. The HT6582 is designed for half-duplex applications.
