## 1. General description

The GD32F207xx device belongs to the performance line of GD32 MCU Family. It is a new 32-bit general-purpose microcontroller based on the ARM® Cortex®-M3 RISC core with best cost-performance ratio in terms of processing capacity, reduced power consumption and peripheral set. The Cortex®-M3 is a next generation processor core which is tightly coupled with a Nested Vectored Interrupt Controller (NVIC), SysTick timer and advanced debug support.

The GD32F207xx device incorporates the ARM® Cortex®-M3 32-bit processor core operating at 120 MHz frequency with flash accesses zero wait states to obtain maximum efficiency. It provides up to 3072 KB on-chip flash memory and 256 KB SRAM memory. An extensive range of enhanced I/Os and peripherals connected to two APB buses. The devices offer up to three 12-bit 2 MSPS ADCs, two 12-bit DACs, up to ten 16-bit general timers, two 16-bit basic timers plus two 16-bit PWM advanced timers, as well as standard and advanced communication interfaces: up to three SPIs, three I2Cs, four USARTs and four UARTs, two I2Ss, two CANs, a SDIO, a USBFS and an Ethernet. Additional peripherals as TFT-LCD Interface (TLI), EXMC interface with SDRAM extension support, Digital camera interface (DCI), Cryptographic acceleration unit (CAU), Hash acceleration unit (HAU), True random number generator (TRNG) are included.

The device operates from a 2.6 to 3.6V power supply and available in –40 to +85 °C temperature range. Several power saving modes provide the flexibility for maximum optimization of power consumption, an especially important consideration in low power applications.

The above features make GD32F207xx devices suitable for a wide range of interconnection and advanced applications, especially in areas such as industrial control, consumer and handheld equipment, embedded modules, human machine interface, security and alarm systems, POS and electronic payment, automotive navigation and so on.

## 2. Device overview

## 3. Functional description

### 3.1. ARM® Cortex®-M3 core

The Cortex®-M3 processor is the latest generation of ARM® processors for embedded systems. It has been developed to provide a low-cost platform that meets the needs of MCU implementation, with a reduced pin count and low-power consumption, while delivering outstanding computational performance and an advanced system response to interrupts.

- 32-bit ARM® Cortex®-M3 processor core
- Up to 120 MHz operation frequency
- Single-cycle multiplication and hardware divider
- Integrated Nested Vectored Interrupt Controller (NVIC)
- 24-bit SysTick timer

The Cortex®-M3 processor is based on the ARMv7 architecture and supports both Thumb and Thumb-2 instruction sets. Some system peripherals listed below are also provided by Cortex®-M3:

- Internal Bus Matrix connected with ICode bus, DCode bus, system bus, Private Peripheral Bus (PPB) and debug accesses (AHB-AP)
- Nested Vectored Interrupt Controller (NVIC)
- Flash Patch and Breakpoint (FPB)
- Data Watchpoint and Trace (DWT)
- Instrument Trace Macrocell (ITM)
- Memory Protection Unit (MPU)
- Serial Wire JTAG Debug Port (SWJ-DP)
- Trace Port Interface Unit (TPIU)

### 3.2. On-chip memory

- Up to 3072 Kbytes of flash memory, including code flash and data flash
- Up to 256 Kbytes of SRAM

The ARM® Cortex®-M3 processor is structured in Harvard architecture which can use separate buses to fetch instructions and load/store data. 3072 Kbytes of inner flash at most, which includes code flash and data flash is available for storing programs and data, and accessed (R/W) at CPU clock speed with zero wait states. Up to 256 Kbytes of inner SRAM is composed of SRAM0, SRAM1, and SRAM2 that can be accessed at same time. [Table 2-2. GD32F207xx memory map](#) shows the memory map of the GD32F207xx series of devices, including flash, SRAM, peripheral, and other pre-defined regions.

### 3.3. Clock, reset and supply management

- Internal 8 MHz factory-trimmed RC and external 3 to 25 MHz crystal oscillator
- Internal 40 KHz RC calibrated oscillator and external 32.768 KHz crystal oscillator
- Integrated system clock PLL
- 2.6 to 3.6 V application supply and I/Os
- Supply Supervisor: POR (Power On Reset), PDR (Power Down Reset), and low voltage detector (LVD)

The Clock Control Unit (CCU) provides a range of oscillator and clock functions. These include speed internal RC oscillator and external crystal oscillator, high speed and low speed two types. Several prescalers allow the frequency configuration of the AHB and two APB domains. The maximum frequency of the AHB/APB2/APB1 domains is 120/120/60 MHz. See [Figure 2-6. GD32F207xx clock tree](#) for details on the clock tree.

The Reset Control Unit (RCU) controls three kinds of reset: system reset resets the processor core and peripheral IP components. Power-on reset (POR) and power-down reset (PDR) are always active, and ensures proper operation starting from 2.6 V and down to 1.8V. The device remains in reset mode when  $V_{DD}$  is below a specified threshold. The embedded low voltage detector (LVD) monitors the power supply, compares it to the voltage threshold and generates an interrupt as a warning message for leading the MCU into security.

Power supply schemes:

- $V_{DD}$  range: 2.6 to 3.6 V, external power supply for I/Os and the internal regulator. Provided externally through  $V_{DD}$  pins.
- $V_{SSA}$ ,  $V_{DDA}$  range: 2.6 to 3.6 V, external analog power supplies for ADC, reset blocks, RCs and PLL.  $V_{DDA}$  and  $V_{SSA}$  must be connected to  $V_{DD}$  and  $V_{SS}$ , respectively.
- $V_{BAT}$  range: 1.8 to 3.6 V, power supply for RTC, external clock 32 KHz oscillator and backup registers (through power switch) when  $V_{DD}$  is not present.

### 3.4. Boot modes

At startup, boot pins are used to select one of three boot options:

- Boot from main flash memory (default)
- Boot from system memory
- Boot from on-chip SRAM

The boot loader is located in the internal boot ROM memory (system memory). It is used to reprogram the flash memory by using USART0 (PA9 and PA10), USART1 (PD5 and PD6) and USB (PA9, PA10, PA11 and PA12). It also can be used to transfer and update the flash memory code, the data and the vector table sections. In default condition, boot from bank 0 of flash memory is selected. It also supports to boot from bank 1 of flash memory by setting a bit in option bytes.

### 3.5. Power saving modes

The MCU supports three kinds of power saving modes to achieve even lower power consumption. They are sleep mode, deep-sleep mode, and standby mode. These operating modes reduce the power consumption and allow the application to achieve the best balance between the CPU operating time, speed and power consumption.

- **Sleep mode**

In sleep mode, only the clock of CPU core is off. All peripherals continue to operate and any interrupt/event can wake up the system.

- **Deep-sleep mode**

In deep-sleep mode, all clocks in the 1.2V domain are off, and all of the high speed crystal oscillator (IRC8M, HXTAL) and PLL are disabled. Only the contents of SRAM and registers are retained. Any interrupt or wakeup event from EXTI lines can wake up the system from the deep-sleep mode including the 16 external lines, the RTC alarm, the LVD output, the Ethernet wakeup and USB wakeup. When exiting the deep-sleep mode, the IRC8M is selected as the system clock.

- **Standby mode**

In standby mode, the whole 1.2V domain is power off, the LDO is shut down, and all of IRC8M, HXTAL and PLL are disabled. The contents of SRAM and registers (except backup registers) are lost. There are four wakeup sources for the standby mode, including the external reset from NRST pin, the RTC alarm, the FWDGT reset, and the rising edge on WKUP pin.

### 3.6. Analog to digital converter (ADC)

- 12-bit SAR ADC engine with up to 2 MSPS conversion rate
- 12-bit, 10-bit, 8-bit or 6-bit configurable resolution
- Hardware oversampling ratio adjustable from 2 to 256x improves resolution to 16-bit
- Conversion range:  $V_{SSA}$  to  $V_{DDA}$  (2.6 to 3.6 V)
- Temperature sensor

Up to three 12-bit 2 MSPS multi-channel ADC are integrated in the device. It is a total of up to 16 multiplexed external channels with 2 internal channels for temperature sensor and voltage reference measurement. The conversion range is between  $2.6\text{ V} < V_{DDA} < 3.6\text{ V}$ . An on-chip 16-bit hardware oversample scheme improves performances while off-loading the related computational burden from the MCU. An analog watchdog block can be used to detect the channels, which are required to remain within a specific threshold window. A configurable channel management block of analog inputs also can be used to perform conversions in single, continuous, scan or discontinuous mode to support more advanced usages.

The ADC can be triggered from the events generated by the general level 0 timers (TIMERx) and the advanced timers (TIMER0 and TIMER7) with internal connection. The temperature sensor can be used to generate a voltage that varies linearly with temperature. It is internally

connected to the ADC\_IN16 input channel which is used to convert the sensor output voltage into a digital value.

### 3.7. Digital to analog converter (DAC)

- 12-bit DAC converter of independent output channel
- 8-bit or 12-bit mode in conjunction with the DMA controller

The 12-bit buffered DAC channel is used to generate variable analog outputs. The DAC is designed with integrated resistor strings structure. The DAC channels can be triggered by the timer update outputs or EXTI with DMA support. The maximum output value of the DAC is  $V_{REF+}$ .

### 3.8. DMA

- 14 channels DMA controller and each channel are configurable (7 for DMA0 and 7 for DMA1)
- Peripherals supported: Timers, ADC, SPIs, I2Cs, USARTs, DAC, I2S, SDIO, DCI, CAU and HAU

The flexible general-purpose DMA controllers provide a hardware method of transferring data between peripherals and/or memory without intervention from the CPU, thereby freeing up bandwidth for other system functions. Three types of access method are supported: peripheral to memory, memory to peripheral, memory to memory.

Each channel is connected to fixed hardware DMA requests. The priorities of DMA channel requests are determined by software configuration and hardware channel number. Transfer size of source and destination are independent and configurable.

### 3.9. General-purpose inputs/outputs (GPIOs)

- Up to 140 fast GPIOs, all mappable on 16 external interrupt lines
- Analog input/output configurable
- Alternate function input/output configurable

There are up to 140 general purpose I/O pins (GPIO) in GD32F207xx, named PA0 ~ PA15, PB0 ~ PB15, PC0 ~ PC15, PD0 ~ PD15, PE0 ~ PE15, PF0 ~ PF15, PG0 ~ PG15, PH0 ~ PH15 and PI0 ~ PI11 to implement logic input/output functions. Each of the GPIO ports has related control and configuration registers to satisfy the requirements of specific applications. The external interrupts on the GPIO pins of the device have related control and configuration registers in the Interrupt/event controller (EXTI). The GPIO ports are pin-shared with other alternative functions (AFs) to obtain maximum flexibility on the package pins. Each of the GPIO pins can be configured by software as output (push-pull or open-drain), as input (with or without pull-up or pull-down) or as peripheral alternate function. Most of the GPIO pins are

shared with digital or analog alternate functions. All GPIOs are high-current capable except for analog inputs.

### 3.10. Timers and PWM generation

- Two 16-bit advanced timer (TIMER0 & TIMER7), ten 16-bit general timers (TIMER1 ~ TIMER4, TIMER8 ~ TIMER13), and two 16-bit basic timer (TIMER5 & TIMER6)
- Up to 4 independent channels of PWM, output compare or input capture for each general timer and external trigger input
- 16-bit, motor control PWM advanced timer with programmable dead-time generation for output match
- Encoder interface controller with two inputs using quadrature decoder
- 24-bit SysTick timer down counter
- 2 watchdog timers (free watchdog timer and window watchdog timer)

The advanced timer (TIMER0 & TIMER7) can be used as a three-phase PWM multiplexed on 6 channels. It has complementary PWM outputs with programmable dead-time generation. It can also be used as a complete general timer. The 4 independent channels can be used for input capture, output compare, PWM generation (edge- or center-aligned counting modes) and single pulse mode output. If configured as a 16-bit general timer, it has the same functions as the TIMEx timer. It can be synchronized with external signals or to interconnect with other general timers together which have the same architecture and features.

The general timer, known as TIMER1 ~ TIMER4, TIMER8 ~ TIMER13 can be used for a variety of purposes including general time, input signal pulse width measurement or output waveform generation such as a single pulse generation or PWM output, up to 4 independent channels for input capture/output compare. The general timer is based on a 16-bit auto-reload up/down counter and a 16-bit prescaler. TIMER1 ~ TIMER4 and TIMER8/TIMER11 also supports an encoder interface with two inputs using quadrature decoder.

The basic timer, known as TIMER5 & TIMER6, are mainly used for DAC trigger generation. They can also be used as a simple 16-bit time base.

The GD32F207xx have two watchdog peripherals, free watchdog timer and window watchdog timer. They offer a combination of high safety level, flexibility of use and timing accuracy.

The free watchdog timer includes a 12-bit down-counting counter and an 8-bit prescaler, it is clocked from an independent 40 KHz internal RC and as it operates independently of the main clock, it can operate in deep-sleep and standby modes. It can be used either as a watchdog to reset the device when a problem occurs, or as a free-running timer for application timeout management.

The window watchdog timer is based on a 7-bit down counter that can be set as free-running. It can be used as a watchdog to reset the device when a problem occurs. It is clocked from the main clock. It has an early wakeup interrupt capability and the counter can be frozen in debug mode.

The SysTick timer is dedicated for OS, but could also be used as a standard down counter.

The features are shown below:

- A 24-bit down counter
- Auto reload capability
- Maskable system interrupt generation when the counter reaches 0
- Programmable clock source

### 3.11. Real time clock (RTC) and backup registers

- 32-bit up-counter with a programmable 20-bit prescaler
- Alarm function
- Interrupt and wake-up event
- 84 bytes backup registers for data protection

The real time clock is an independent timer which provides a set of continuously running counters in backup registers to provide a real calendar function, and provides an alarm interrupt or an expected interrupt. It is not reset by a system or power reset, or when the device wakes up from standby mode. A 20-bit prescaler is used for the time base clock and is by default configured to generate a time base of 1 second from a clock at 32.768 KHz from external crystal oscillator.

The backup registers are located in the backup domain that remains powered-on by  $V_{BAT}$  even if  $V_{DD}$  power is shut down, they are forty two 16-bit (84 bytes) registers for data protection of user application data, and the wake-up action from standby mode or system reset do not affect these registers.

In addition, the backup registers can be used to implement the tamper detection, RTC calibration function and waveform detection.

### 3.12. Inter-integrated circuit (I2C)

- Up to three I2C bus interfaces can support both master and slave mode with a frequency up to 400 KHz
- Provide arbitration function, optional PEC (packet error checking) generation and checking
- Supports 7-bit and 10-bit addressing mode and general call addressing mode

The I2C interface is an internal circuit allowing communication with an external I2C interface which is an industry standard two line serial interface used for connection to external hardware. These two serial lines are known as a serial data line (SDA) and a serial clock line (SCL). The I2C module provides transfer rate of up to 100 KHz in standard mode and up to 400 KHz in fast mode. The I2C module also has an arbitration detect function to prevent the situation where more than one master attempts to transmit data to the I2C bus at the same time. A CRC-8 calculator is also provided in I2C interface to perform packet error checking

for I2C data.

### 3.13. Serial peripheral interface (SPI)

- Up to three SPI interfaces with a frequency of up to 30 MHz
- Support both master and slave mode
- Hardware CRC calculation and transmit automatic CRC error checking
- Quad wire configuration available in master mode (only in SPI0)

The SPI interface uses 4 pins, among which are the serial data input and output lines (MISO & MOSI), the clock line (SCK) and the slave select line (NSS). Both SPIs can be served by the DMA controller. The SPI interface may be used for a variety of purposes, including simplex synchronous transfers on two lines with a possible bidirectional data line or reliable communication using CRC checking. Quad-SPI master mode is also supported in SPI0.

### 3.14. Universal synchronous/asynchronous receiver transmitter (USART/UART)

- Up to four USARTs and four UARTs with operating frequency up to 7.5 MHz
- Supports both asynchronous and clocked synchronous serial communication modes
- IrDA SIR encoder and decoder support
- LIN break generation and detection
- ISO 7816-3 compliant smart card interface

The USART (USART0, USART1, USART2, USART5) and UART (UART3, UART4, UART6, UART7) are used to transmit data between parallel and serial interfaces, provides a flexible full duplex data exchange using synchronous or asynchronous transfer. It is also commonly used for RS-232 standard communication. The USART/UART includes a programmable baud rate generator which is capable of dividing the system clock to produce a dedicated clock for the USART/UART transmitter and receiver. The USART/UART also supports DMA function for high speed data communication.

### 3.15. Inter-IC sound (I2S)

- Two I2S bus Interfaces with sampling frequency from 8 KHz to 192 KHz, multiplexed with SPI1 and SPI2
- Support either master or slave mode audio
- Sampling frequencies from 8 KHz up to 192 KHz are supported.

The Inter-IC sound (I2S) bus provides a standard communication interface for digital audio applications by 3-wire serial lines. GD32F207xx contain an I2S-bus interface that can be operated with 16/32-bit resolution in master or slave mode, pin multiplexed with SPI1 and

SPI2. The audio sampling frequencies from 8 KHz to 192 KHz is supported with less than 0.5% accuracy error.

### 3.16. Universal serial bus full-speed interface (USBFS)

- One USB device/host full-speed Interface with frequency up to 12 Mbit/s
- Internal main PLL for USB CLK compliantly

The Universal Serial Bus (USB) is a 4-wire bus with 4 bidirectional endpoints. The device controller enables 12 Mbit/s data exchange with integrated transceivers in device/host mode. Full-speed peripheral is compliant with the USB 2.0 specification. Transaction formatting is performed by the hardware, including CRC generation and checking. The status of a completed USB transfer or error condition is indicated by status registers. An interrupt is also generated if enabled. The dedicated 48 MHz clock is generated from the internal main PLL (the clock source must use a HXTAL crystal oscillator) and the operating frequency divided from APB1 should be 12 MHz above.

### 3.17. Controller area network (CAN)

- Two CAN2.0B interface with communication frequency up to 1 Mbit/s
- Internal main PLL for CAN CLK compliantly

Controller area network (CAN) is a method for enabling serial communication in field bus. The CAN protocol has been used extensively in industrial automation and automotive applications. It can receive and transmit standard frames with 11-bit identifiers as well as extended frames with 29-bit identifiers. Each CAN has three mailboxes for transmission and two FIFOs of three message deep for reception. It also provides 28 scalable/configurable identifier filter banks for selecting the incoming messages needed and discarding the others.

### 3.18. Ethernet (ENET)

- IEEE 802.3 compliant media access controller (MAC) for Ethernet LAN
- 10/100 Mbit/s rates with dedicated DMA controller and SRAM
- Support hardware precision time protocol (PTP) with conformity to IEEE 1588

The Ethernet media access controller (MAC) conforms to IEEE 802.3 specifications and fully supports IEEE 1588 standards. The embedded MAC provides the interface to the required external network physical interface (PHY) for LAN bus connection via an internal media independent interface (MII) or a reduced media independent interface (RMII). The number of MII signals provided up to 16 with 25 MHz output and RMII up to 7 with 50 MHz output. The function of 32-bit CRC checking is also available.

### 3.19. External memory controller (EXMC)

- Supported external memory: SRAM, PSRAM, ROM and NOR-Flash, NAND Flash and PC card, SDRAM with up to 32-bit data bus
- Provide ECC calculating hardware module for NAND Flash memory block
- Two SDRAM banks with independent configuration, up to 13-bits Row Address, 11-bits Column Address, 2-bits internal banks address
- SDRAM Memory size: 4x16Mx32bit(256 MB), 4x16Mx16bit (128 MB), 4x16Mx8bit (64 MB)

External memory controller (EXMC) is an abbreviation of external memory controller. It is divided into several sub-banks for external device support, each sub-bank has its own chip selection signal but at one time, only one bank can be accessed. The EXMC support code execution from external memory except NAND Flash and PC card. The EXMC also can be configured to interface with the most common LCD module of Motorola 6800 and Intel 8080 series and reduce the system cost and complexity.

The EXMC of GD32F207xx in LQFP144 package above also supports synchronous dynamic random access memory (SDRAM). It translates AHB transactions into the appropriate SDRAM protocol, and meanwhile, makes sure the access time requirements of the external SDRAM devices are satisfied.

### 3.20. Secure digital input and output card interface (SDIO)

- Support SD2.0/SDIO2.0/MMC4.2 host interface

The Secure Digital Input and Output Card Interface (SDIO) provides access to external SD memory cards specifications version 2.0, SDIO card specification version 2.0 and multi-media card system specification version 4.2 with DMA supported. In addition, this interface is also compliant with CE-ATA digital protocol rev1.1.

### 3.21. TFT LCD interface (TLI)

- 24-bit RGB Parallel Pixel Output; 8 bits-per-pixel (RGB888)
- Supports up to SVGA (800x600) resolution

The TFT LCD interface provides a parallel digital RGB (Red, Green, Blue) and signals for horizontal, vertical synchronization, pixel clock and data enable as output to interface directly to a variety of LCD (Liquid Crystal Display) and TFT (Thin Film Transistor) panels. A built-in DMA engine continuously move data from system memory to TLI and then, output to an external LCD display. Two separate layers are supported in TLI, as well as layer window and blending function.

### 3.22. Digital camera interface (DCI)

- Digital video/picture capture
- 8/10/12/14 data width supported
- High transfer efficiency with DMA interface
- Video/picture crop supported
- Various pixel formats supported including JPEG/YCrCb/RGB
- Hard/embedded synchronous signals supported

DCI is an 8-bit to 14-bit parallel interface that able to capture video or picture from a camera via Digital Camera Interface. It supports 8/10/12/14 bits data width through DMA operation.

### 3.23. Cryptographic acceleration Unit (CAU)

- Supports DES, 3DES or AES algorithm
- DES/3DES supports Electronic codebook (ECB) or Cipher block chaining (CBC) mode
- 3DES supports 64bits-key, 128bits-key or 192bits-key
- AES supports 128bits-key, 192bits-key or 256 bits-key
- AES supports Electronic codebook (ECB), Cipher block chaining (CBC) mode or Counter mode (CTR) mode
- Support DMA mode for input data flow

The Cryptographic Acceleration Unit supports acceleration of DES, 3DES or AES (128, 192, or 256) algorithms. The DES/3DES supports Electronic codebook (ECB) or Cipher block chaining (CBC) mode. The AES supports Electronic codebook (ECB), Cipher block chaining (CBC) mode or Counter mode (CTR) mode.

### 3.24. Hash acceleration unit (HAU)

- Supports SHA-1, SHA-224 and SHA-256 algorithms, compliant with FIPS PUB 180-2 (Federal Information Processing Standards Publication 180-2)
- Supports MD5 compliant with IETF RFC 1321 (Internet Engineering Task Force Request For Comments number 1321)
- Supports HMAC (keyed-hash message authentication code) algorithm
- Automatic swapping to comply with the big-endian or little-endian for MD5, SHA-1, SHA-224 and SHA-256 algorithms
- Automatic padding to fit module 512
- Support DMA mode for input data flow

The HAU supports acceleration of SHA-1, SHA-224, SHA-256, MD5 algorithm and the HMAC (keyed-hash message authentication code) algorithm, which calling the SHA-1, SHA-224, SHA-256 or MD5 hash function to calculate key, message, digest three times.

### 3.25. True Random number generator (TRNG)

- About 40 period PLL clock consumed between two consecutive random numbers
- Disable TRNG module will reduce the chip power consumption
- 32-bit random value seed is generated from analog noise

The true random number generator (TRNG) module can generate a 32-bit value using continuous analog noise.

### 3.26. Debug mode

- Serial wire JTAG debug port (SWJ-DP)

The ARM® SWJ-DP Interface is embedded and is a combined JTAG and serial wire debug port that enables either a serial wire debug or a JTAG probe to be connected to the target.

### 3.27. Package and operation temperature

- LQFP176 (GD32F207Ix), LQFP144 (GD32F207Zx), LQFP100 (GD32F207Vx), LQFP64 (GD32F207Rx)
- Operation temperature range: -40°C to +85°C (industrial level)

## 4. Electrical characteristics

### 4.1. Absolute maximum ratings

The maximum ratings are the limits to which the device can be subjected without permanently damaging the device. Note that the device is not guaranteed to operate properly at the maximum ratings. Exposure to the absolute maximum rating conditions for extended periods may affect device reliability.

**Table 4-1. Absolute maximum ratings**

Symbol	Parameter	Min	Max	Unit
$V_{DD}$	External voltage range	$V_{SS} - 0.3$	$V_{SS} + 3.6$	V
$V_{DDA}$	External analog supply voltage	$V_{SSA} - 0.3$	$V_{SSA} + 3.6$	V
$V_{BAT}$	External battery supply voltage	$V_{SS} - 0.3$	$V_{SS} + 3.6$	V
$V_{IN}$	Input voltage on 5V tolerant pin	$V_{SS} - 0.3$	$V_{DD} + 4.0$	V
	Input voltage on other I/O	$V_{SS} - 0.3$	4.0	V
$I_{IO}$	Maximum current for GPIO pins	—	25	mA
$I_{INJ}$	Injected current on 5V tolerant pin	—	$\pm 5$	mA
	Injected current on other I/O	—	$\pm 5$	mA
$\sum I_{INJ}$	Injected current on all I/O	—	$\pm 25$	mA
$T_A$	Operating temperature range	-40	+85	°C
$T_{STG}$	Storage temperature range	-55	+150	°C
$T_J$	Maximum junction temperature	—	125	°C

### 4.2. Recommended DC characteristics

**Table 4-2. DC operating conditions**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{DD}$	Supply voltage	—	2.6	3.3	3.6	V
$V_{DDA}$	Analog supply voltage	Same as $V_{DD}$	2.6	3.3	3.6	V
$V_{BAT}$	Battery supply voltage	—	1.8	—	3.6	V

### 4.3. Power consumption

The power measurements specified in the tables represent that code with data executing from on-chip Flash with the following specifications.

**Table 4-3. Power consumption characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$I_{DD}$	Supply current (Run mode)	$V_{DD}=V_{DDA}=3.3V$ , HXTAL=25MHz, System clock=120 MHz, All peripherals enabled	—	130.1 5	—	mA

Symbol	Parameter	Conditions	Min	Typ	Max	Unit	
I <sub>BAT</sub>		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=25MHz, System clock =120 MHz, All peripherals disabled	—	56.43	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=25MHz, System clock=108 MHz, All peripherals enabled	—	117.45	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=25MHz, System clock =108 MHz, All peripherals disabled	—	51.07	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=25MHz, System clock =72MHz, All peripherals enabled	—	79.03	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=25MHz, System Clock =72 MHz, All peripherals disabled	—	35.05	—	mA	
	Supply current (Sleep mode)	V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=8MHz, CPU clock off, System clock=120 MHz, All peripherals enabled	—	93.05	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, HXTAL=8MHz, CPU clock off, System clock=120 MHz, All peripherals disabled	—	12.54	—	mA	
	Supply current (Deep-Sleep mode)	V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, Regulator in Run mode, IRC40K on, RTC on, All GPIOs analog mode	—	1.21	—	mA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, Regulator in Low Power mode, IRC40K on, RTC on, All GPIOs analog mode	—	1.18	—	mA	
	Supply current (Standby mode)	V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, LXTAL off, IRC40K on, RTC on	—	7.49	—	μA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, LXTAL off, IRC40K on, RTC off	—	7.18	—	μA	
		V <sub>DD</sub> =V <sub>DDA</sub> =3.3V, LXTAL off, IRC40K off, RTC off	—	6.02	—	μA	
	I <sub>BAT</sub>	Battery supply current	V <sub>BAT</sub> =3.6V, LXTAL on, RTC on, LXTAL High driving	—	2.77	—	μA
			V <sub>BAT</sub> =3.3V, LXTAL on, RTC on, LXTAL High driving	—	2.48	—	μA
			V <sub>BAT</sub> =2.6V, LXTAL on, RTC on, LXTAL High driving	—	1.86	—	μA
V <sub>BAT</sub> =3.6V, LXTAL on, RTC on, LXTAL Mid High driving			—	1.11	—	μA	
V <sub>BAT</sub> =3.3V, LXTAL on, RTC on, LXTAL Mid High driving			—	1.04	—	μA	
V <sub>BAT</sub> =2.6V, LXTAL on, RTC on, LXTAL Mid High driving			—	0.93	—	μA	
V <sub>BAT</sub> =3.6V, LXTAL on, RTC on, LXTAL Mid Low driving			—	0.84	—	μA	
V <sub>BAT</sub> =3.3V, LXTAL on, RTC on, LXTAL Mid Low driving			—	0.77	—	μA	
V <sub>BAT</sub> =2.6V, LXTAL on, RTC on, LXTAL Mid Low driving			—	0.63	—	μA	

## 4.4. EMC characteristics

EMS (electromagnetic susceptibility) includes ESD (Electrostatic discharge, positive and negative) and FTB (Burst of Fast Transient voltage, positive and negative) testing result is given in [Table 4-4. EMS characteristics](#), based on the EMS levels and classes compliant

with IEC 61000 series standard.

**Table 4-4. EMS characteristics**

Symbol	Parameter	Conditions	Level/Class
V <sub>ESD</sub>	Voltage applied to all device pins to induce a functional disturbance	V <sub>DD</sub> = 3.3 V, T <sub>A</sub> = +25 °C conforms to IEC 61000-4-2	3B
V <sub>FTB</sub>	Fast transient voltage burst applied to induce a functional disturbance through 100 pF on V <sub>DD</sub> and V <sub>SS</sub> pins	V <sub>DD</sub> = 3.3 V, T <sub>A</sub> = +25 °C conforms to IEC 61000-4-4	4A

EMI (Electromagnetic Interference) emission testing result is given in [Table 4-5. EMI characteristics](#), compliant with IEC 61967-2 standard which specifies the test board and the pin loading.

**Table 4-5. EMI characteristics**

Symbol	Parameter	Conditions	Tested frequency band	Conditions			Unit
				56M	72M	120M	
S <sub>EMI</sub>	Peak level	V <sub>DD</sub> = 3.3 V, T <sub>A</sub> = +25 °C, compliant with IEC 61967-2	0.1 to 2 MHz	<0	<0	<0	dBμV
			2 to 30 MHz	-3.7	-2.8	-1.8	
			30 to 130 MHz	-6.5	-8	-5.3	
			130 MHz to 1GHz	-7	-7	-5	

## 4.5. Power supply supervisor characteristics

**Table 4-6. Power supply supervisor characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
V <sub>POR</sub>	Power on reset threshold		2.32	2.40	2.48	V
V <sub>PDR</sub>	power down reset threshold		1.72	1.80	1.88	V
V <sub>HYST</sub>	PDR hysteresis		—	0.6	—	V
T <sub>RSTTEMP</sub>	Reset temporization		—	2	—	ms

## 4.6. Electrical sensitivity

The device is strained in order to determine its performance in terms of electrical sensitivity. Electrostatic discharges (ESD) are applied directly to the pins of the sample. Static latch-up (LU) test is based on the two measurement methods.

**Table 4-7. ESD characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
V <sub>ESD(HBM)</sub>	Electrostatic discharge voltage (human body model)	T <sub>A</sub> =25 °C; JESD22-A114	—	—	5000	V

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{ESD(CDM)}$	Electrostatic discharge voltage (charge device model)	$T_A=25\text{ }^\circ\text{C}$ ; JESD22-C101	—	—	500	V

**Table 4-8. Static latch-up characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
LU	I-test	$T_A=25\text{ }^\circ\text{C}$ ; JESD78	—	—	$\pm 100$	mA
	$V_{\text{supply}}$ over voltage		—	—	5.4	V

## 4.7. External clock characteristics

**Table 4-9. High speed external clock (HXTAL) generated from a crystal/ceramic characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{\text{HXTAL}}$	High Speed External oscillator (HXTAL) frequency	$V_{DD}=3.3\text{V}$	4	8	32	MHz
$C_{\text{HXTAL}}$	Recommended load capacitance on OSCIN and OSCOUT	—	—	20	30	pF
$R_{\text{FHXTAL}}$	Recommended external feedback resistor between XTALIN and XTALOUT	—	—	1	—	M $\Omega$
$D_{\text{HXTAL}}$	HXTAL oscillator duty cycle	—	48	50	52	%
$I_{\text{DDHXTAL}}$	HXTAL oscillator operating current	$V_{DD}=3.3\text{V}$ , $T_A=25\text{ }^\circ\text{C}$	—	—	1.2	$\mu\text{A}$
$t_{\text{SUHXTAL}}$	HXTAL oscillator startup time	$V_{DD}=3.3\text{V}$ , $T_A=25\text{ }^\circ\text{C}$	—	2	—	ms

**Table 4-10. Low speed external clock (LXTAL) generated from a crystal/ceramic characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{\text{LXTAL}}$	Low Speed External oscillator (LXTAL) frequency	$V_{DD}=V_{\text{BAT}}=3.3\text{V}$	—	32.768	1000	KHz
$C_{\text{LXTAL}}$	Recommended load capacitance on OSC32IN and OSC32OUT	—	8	10	15	pF
$R_{\text{FLXTAL}}$	Recommended external feedback resistor between XTAL32IN and XTAL32OUT	—	—	5	—	M $\Omega$
$D_{\text{LXTAL}}$	LXTAL oscillator duty cycle	—	48	50	52	%
$I_{\text{DDLXTAL}}$	LXTAL oscillator operating current	$V_{DD}=V_{\text{BAT}}=3.3\text{V}$	—	10	—	$\mu\text{A}$
$t_{\text{SULXTAL}}$	LXTAL oscillator startup time	$V_{DD}=V_{\text{BAT}}=3.3\text{V}$	—	3	—	s

## 4.8. Internal clock characteristics

**Table 4-11. High speed internal clock (IRC8M) characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{IRC8M}$	High Speed Internal Oscillator (IRC8M) frequency	$V_{DD}=3.3V$	—	8	—	MHz
$ACC_{IRC8M}$	IRC8M oscillator Frequency accuracy, Factory-trimmed	$V_{DD}=3.3V, T_A=-40^{\circ}C \sim +105^{\circ}C$	-2.5	—	+1.5	%
		$V_{DD}=3.3V, T_A=0^{\circ}C \sim +85^{\circ}C$	-1.2	—	+1.2	%
		$V_{DD}=3.3V, T_A=25^{\circ}C$	-1	—	+1	%
$D_{IRC8M}$	IRC8M oscillator duty cycle	$V_{DD}=3.3V, f_{IRC8M}=8MHz$	48	50	52	%
$I_{DDIRC8M}$	IRC8M oscillator operating current	$V_{DD}=3.3V, f_{IRC8M}=8MHz$	—	80	100	$\mu A$
$t_{SUIRC8M}$	IRC8M oscillator startup time	$V_{DD}=3.3V, f_{IRC8M}=8MHz$	1	—	2	us

**Table 4-12. Low speed internal clock (IRC40K) characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{IRC40K}$	Low Speed Internal oscillator (IRC40K) frequency	$V_{DD}=V_{BAT}=3.3V, T_A=-40^{\circ}C \sim +85^{\circ}C$	30	40	60	KHz
$I_{DDIRC40K}$	IRC40K oscillator operating current	$V_{DD}=V_{BAT}=3.3V, T_A=25^{\circ}C$	—	1	2	$\mu A$
$t_{SUIRC40K}$	IRC40K oscillator startup time	$V_{DD}=V_{BAT}=3.3V, T_A=25^{\circ}C$	—	—	80	$\mu s$

## 4.9. PLL characteristics

**Table 4-13. PLL characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{PLLIN}$	PLL input clock frequency		1	8	25	MHz
$f_{PLL}$	PLL output clock frequency		16	—	120	MHz
$t_{LOCK}$	PLL lock time		—	—	100	$\mu s$

## 4.10. Memory characteristics

**Table 4-14. Flash memory characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$PE_{CYC}$	Number of guaranteed program /erase cycles before failure (Endurance)	$T_A=-40^{\circ}C \sim +85^{\circ}C$	100	—	—	kcycles
$t_{RET}$	Data retention time	$T_A=125^{\circ}C$	20	—	—	years

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$t_{PROG}$	Word programming time	$T_A=-40^{\circ}C \sim +85^{\circ}C$	200	—	400	us
$t_{ERASE}$	Page erase time	$T_A=-40^{\circ}C \sim +85^{\circ}C$	60	100	450	ms
$t_{MERASE}$	Mass erase time	$T_A=-40^{\circ}C \sim +85^{\circ}C$	3.2	—	9.6	s

## 4.11. GPIO characteristics

**Table 4-15. I/O port characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{IL}$	Standard IO Low level input voltage	$V_{DD}=2.6V$	-0.3	—	0.95	V
	5V-tolerant IO Low level input voltage	$V_{DD}=2.6V$	-0.3	—	0.9	V
$V_{IH}$	Standard IO High level input voltage	$V_{DD}=2.6V$	1.2	—	4.0	V
	5V-tolerant IO High level input voltage	$V_{DD}=2.6V$	1.5	—	5.5	V
$V_{OL}$	Low level output voltage	$V_{DD}=2.6V$	—	—	0.2	V
$V_{OH}$	High level output voltage	$V_{DD}=2.6V$	2.3	—	—	V
$R_{PU}$	Internal pull-up resistor	$V_{IN}=V_{SS}$	30	40	50	k $\Omega$
$R_{PD}$	Internal pull-down resistor	$V_{IN}=V_{DD}$	30	40	50	k $\Omega$

## 4.12. ADC characteristics

**Table 4-16. ADC characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{DDA}$	Operating voltage		2.6	3.3	3.6	V
$V_{IN}$	ADC input voltage range		0	—	$V_{REF+}$	V
$f_{ADC}$	ADC clock		0.6	—	28	MHz
$f_s$	Sampling rate	12-bit	—	—	2	MHz
$R_{ADC}$	Input sampling switch resistance		—	—	0.45	k $\Omega$
$C_{ADC}$	Input sampling capacitance	No pin/pad capacitance included	—	6.4	—	pF
$t_{SU}$	Startup time		—	—	1	$\mu$ s

## 4.13. DAC characteristics

**Table 4-17. DAC characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$V_{DDA}$	Operating voltage		2.6	3.3	3.6	V

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
V <sub>DACIN</sub>	DAC input voltage range		0	—	V <sub>REF+</sub>	V
R <sub>LOAD</sub>	Load resistance	Resistive load vs. V <sub>SSA</sub> with buffer ON	5	—	—	kΩ
C <sub>LOAD</sub>	Load capacitance	No pin/pad capacitance included	—	—	50	pF
DNE	Differential non-linearity error	DAC in 12-bit	—	—	±3	LSB
INL	Integral non-linearity	DAC in 12-bit	—	—	±4	LSB
Offset	Offset error	DAC in 12-bit, V <sub>REF+</sub> = 3.6 V	—	—	±12	LSB
GE	Gain error	DAC in 12-bit	—	—	±0.5	%

#### 4.14. I2C characteristics

**Table 4-18. I2C characteristics**

Symbol	Parameter	Conditions	Standard mode		Fast mode		Unit
			Min	Max	Min	Max	
f <sub>SCL</sub>	SCL clock frequency		0	100	0	400	KHz
t <sub>SCL(H)</sub>	SCL clock high time		4.0	—	0.6	—	ns
t <sub>SCL(L)</sub>	SCL clock low time		4.7	—	1.3	—	ns

## 4.15. SPI characteristics

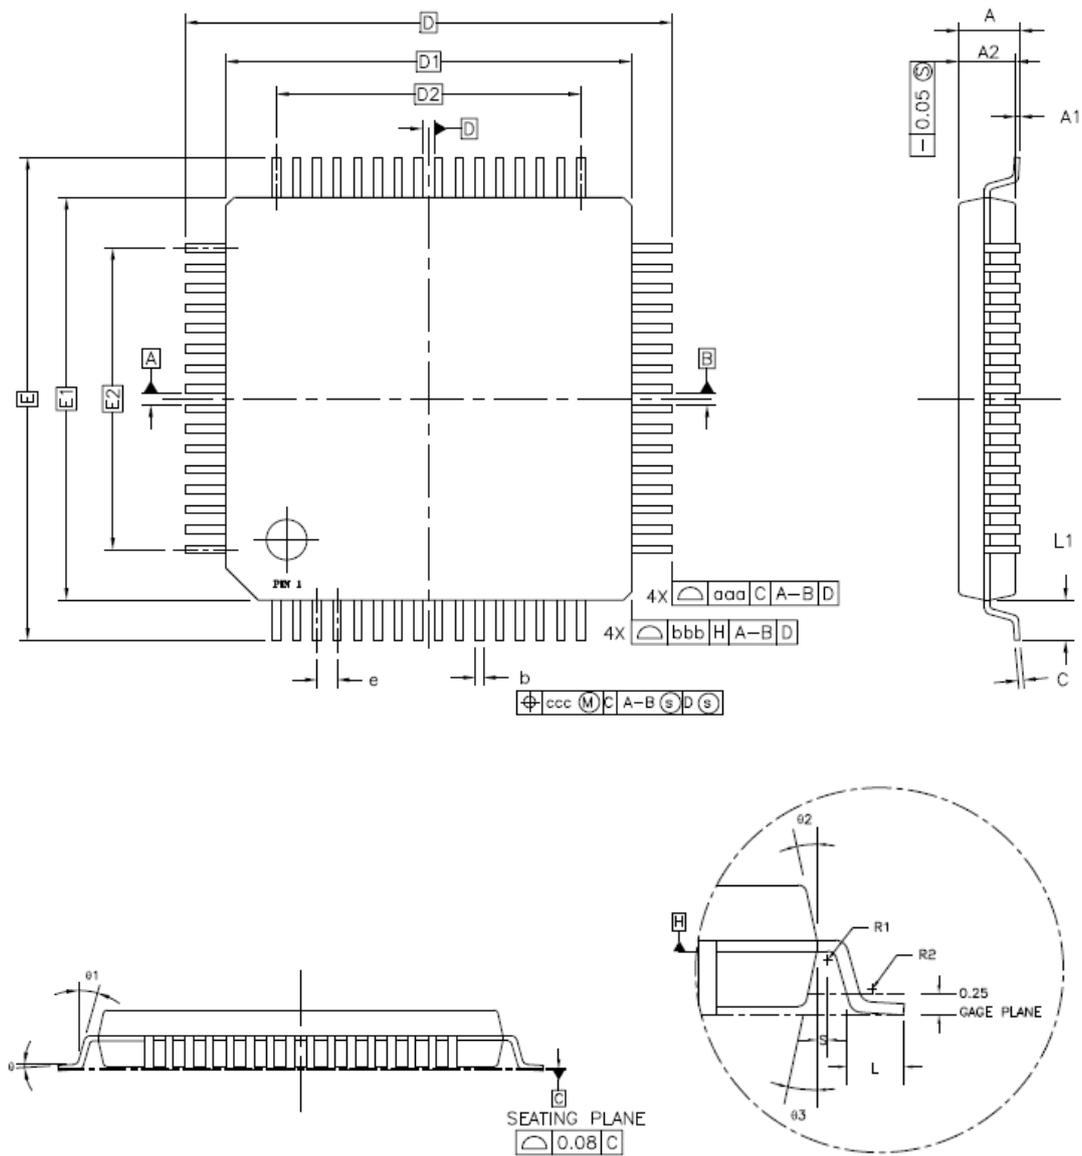

**Table 4-19. Standard SPI characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{SCK}$	SCK clock frequency		—	—	30	MHz
$t_{SCK(H)}$	SCK clock high time		19	—	—	ns
$t_{SCK(L)}$	SCK clock low time		19	—	—	ns
<b>SPI master mode</b>						
$t_{V(MO)}$	Data output valid time		—	—	25	ns
$t_{H(MO)}$	Data output hold time		2	—	—	ns
$t_{SU(MI)}$	Data input setup time		5	—	—	ns
$t_{H(MI)}$	Data input hold time		5	—	—	ns
<b>SPI slave mode</b>						
$t_{SU(NSS)}$	NSS enable setup time	$f_{PCLK}=54MHz$	74	—	—	ns
$t_{H(NSS)}$	NSS enable hold time	$f_{PCLK}=54MHz$	37	—	—	ns
$t_{A(SO)}$	Data output access time	$f_{PCLK}=54MHz$	0	—	55	ns
$t_{DIS(SO)}$	Data output disable time		3	—	10	ns
$t_{V(SO)}$	Data output valid time		—	—	25	ns
$t_{H(SO)}$	Data output hold time		15	—	—	ns
$t_{SU(SI)}$	Data input setup time		5	—	—	ns
$t_{H(SI)}$	Data input hold time		4	—	—	ns

## 5. Package information

### 5.1. LQFP package outline dimensions

Figure 5-1. LQFP package outline

## 6. Ordering information

Table 6-1. Part ordering code for GD32F207xx devices

Ordering code	Flash (KB)	Package	Package type	Temperature operating range
GD32F207RCT6	256	LQFP64	Green	Industrial -40°C to +85°C
GD32F207RET6	512	LQFP64	Green	Industrial -40°C to +85°C
GD32F207RGT6	1024	LQFP64	Green	Industrial -40°C to +85°C
GD32F207RKT6	3072	LQFP64	Green	Industrial -40°C to +85°C
GD32F207VCT6	256	LQFP100	Green	Industrial -40°C to +85°C
GD32F207VET6	512	LQFP100	Green	Industrial -40°C to +85°C
GD32F207VGT6	1024	LQFP100	Green	Industrial -40°C to +85°C
GD32F207VKT6	3072	LQFP100	Green	Industrial -40°C to +85°C
GD32F207ZCT6	256	LQFP144	Green	Industrial -40°C to +85°C
GD32F207ZET6	512	LQFP144	Green	Industrial -40°C to +85°C
GD32F207ZGT6	1024	LQFP144	Green	Industrial -40°C to +85°C
GD32F207ZKT6	3072	LQFP144	Green	Industrial -40°C to +85°C
GD32F207IET6	512	LQFP176	Green	Industrial -40°C to +85°C
GD32F207IGT6	1024	LQFP176	Green	Industrial -40°C to +85°C
GD32F207IKT6	3072	LQFP176	Green	Industrial -40°C to +85°C

## 7. Revision history

**Table 7-1. Revision history**

Revision No.	Description	Date
1.0	Initial Release	Jul. 10, 2015
2.0	Adapt To New Name Convention	Jan. 24, 2018
2.1	Change pin definitions	Dec. 7, 2018
2.2	Modify the clock tree	Nov. 30, 2019
2.3	1.Modify the HXTAL frequency range of the clock tree to 4-32MHz. 2.The ADC2 mapping function corresponding to PF3, PF4 and PF5 pins is modified to multiplexing function.	Mar.13, 2020

## Important Notice

This document is the property of GigaDevice Semiconductor Inc. and its subsidiaries (the "Company"). This document, including any product of the Company described in this document (the "Product"), is owned by the Company under the intellectual property laws and treaties of the People's Republic of China and other jurisdictions worldwide. The Company reserves all rights under such laws and treaties and does not grant any license under its patents, copyrights, trademarks, or other intellectual property rights. The names and brands of third party referred thereto (if any) are the property of their respective owner and referred to for identification purposes only.

The Company makes no warranty of any kind, express or implied, with regard to this document or any Product, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The Company does not assume any liability arising out of the application or use of any Product described in this document. Any information provided in this document is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Except for customized products which has been expressly identified in the applicable agreement, the Products are designed, developed, and/or manufactured for ordinary business, industrial, personal, and/or household applications only. The Products are not designed, intended, or authorized for use as components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, atomic energy control instruments, combustion control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or Product could cause personal injury, death, property or environmental damage ("Unintended Uses"). Customers shall take any and all actions to ensure using and selling the Products in accordance with the applicable laws and regulations. The Company is not liable, in whole or in part, and customers shall and hereby do release the Company as well as its suppliers and/or distributors from any claim, damage, or other liability arising from or related to all Unintended Uses of the Products. Customers shall indemnify and hold the Company as well as its suppliers and/or distributors harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of the Products.

Information in this document is provided solely in connection with the Products. The Company reserves the right to make changes, corrections, modifications or improvements to this document and Products and services described herein at any time, without notice.
