## 2. PRODUCT INTRODUCTION:

WF100DPZ series product is the pressure sensor which measures gauge pressures. It consists of a silicon micro-machined sensing element chip and a signal conditioning ASIC. The ASIC is equipped with a 24-bit resolution  $\Sigma - \Delta$  ADC and outputs a highly precise pressure value as a digital value.

WF100DP series products provides digital output interface. It can achieve ESD robustness, fast response time, high accuracy and linearity as well as long-term stability. All measurement data is fully calibrated and temperature compensated. In addition, it allows for easy system integration.

This series pressure sensor use SOP6 or DIP6 package which is suitable for lots application.

## 7. NORMAL REGISTERS

The WF100D is designed to be connected directly to an external microcontroller of a mobile device via the I<sup>2</sup>C or SPI bus. The pressure and temperature data has to be compensated by the calibration data of the on-chip Non-Volatile Memory (NVM) which is individually factory calibrated for each device.
