储藏 STORAGE

1. LED 在出厂后可在温度 30 度以下，湿度 70% 以下的环境内保存 3 个月时间 The LED should be stored at 30°C or less and 70% RH or less after being shipped from MH and the storage life limits are 3 months.
2. 美华的 LED 是铁合金镀锡的，表面的镀层会被腐蚀性气体侵蚀，因此不要将它保存在可能导致支架氧化，失去光泽或变色的环境，这些腐蚀可能会导致焊接困难，建议尽快使用 Meihua's LED lead frames are comprised of a stannum plated iron alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LED to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the LED be used as soon as possible.
3. 请避免保存在温度变化明显，尤其是高湿度的地方 Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

使用注意事项 Application Restrictions

4. 静电放电（静电放电）ESD (Electrostatic Discharge)

产品敏感的静电或冲击电压。当使用产品时静电放电会损坏模具及其可靠性。对静电放电的措施强烈推荐：**The products are sensitive to static electricity or surge voltage. ESD can damage a die and its reliability. When handling the products, the following measures against electrostatic discharge are strongly recommended:**

消除电荷 **Eliminating the charge**

接地的手环，防静电鞋，衣服和地板 **Grounded wrist strap, ESD footwear, clothes, and floors**

接地的工作站设备和工具 **Grounded workstation equipment and tools**

导电材料的防静电工作台/架子 **ESD table/shelf mat made of conductive materials**

正确的接地用于所有装置、设备和机器生产过程所必须。在产品设计时应考虑冲击保护。**Proper grounding is required for all devices, equipment, and machinery used in product assembly. Surge protection should be considered when designing of commercial products.**

如果工具或设备含有绝缘如玻璃或塑料材料，需要做下列静电放电预防措施：**If tools or equipment contain insulating materials such as glass or plastic, the following measures against electrostatic discharge are strongly recommended:**

用导电材料耗散静电电荷 **Dissipating static charge with conductive materials**

保持环境的湿度 **Preventing charge generation with moisture**

使用离子风扇中和静电 **Neutralizing the charge with ionizers**

5. 发光二极管正向电流方向使用，驱动电路的设计必须使 LED 在关闭的状态下不经受正向或逆向电压，如果反向电压不断应用于发光二极管，它可以导致 LED 损坏 The LEDs should be operated with forward bias. The driving circuit must be designed so that the LEDs are not subjected to forward or reverse voltage while it is off. If reverse voltage is continuously applied to the LEDs, it may cause migration resulting in LED damage.
