T-1 (3-mm) Diffused LED Lamps

Data Sheet

Description

This family of T-1 lamps is widely used in general-purpose indicator applications. Diffusants, tints, and optical design are balanced to yield superior light output and wide viewing angles. Several intensity choices are available in each color for increased design flexibility.

Features

- High intensity
- Choice of four bright colors:
 - High Efficiency Red
 - Orange
 - Yellow
 - High Performance Green
- Popular T-1 diameter package
- Selected minimum intensities
- Wide viewing angle
- General purpose leads
- Reliable and rugged
- Available on tape and reel

Package Dimensions

NOTE

1. All dimensions are in mm (inches).
2. An epoxy meniscus may extend about 1 mm (0.040 in.) down the leads.
3. For PCB hole recommendations, see [Precautions](#).

a. See [Figure 5](#) (HER/Orange), [Figure 10](#) (Yellow), or [Figure 15](#) (Green/Emerald Green) to establish pulsed operating conditions.

b. For Red, Orange, and Green series derate linearly from 50°C at $0.5\text{ mA}/^\circ\text{C}$. For Yellow series derate linearly from 50°C at $0.2\text{ mA}/^\circ\text{C}$.

c. For Red, Orange, and Green series derate power linearly from 25°C at $1.8\text{ mW}/^\circ\text{C}$. For Yellow series derate power linearly from 50°C at $1.6\text{ mW}/^\circ\text{C}$.

d. The transient peak current is the maximum non-recurring peak current that can be applied to the device without damaging the LED die and wirebond. It is not recommended that the device be operated at peak currents beyond the peak forward current listed in the Absolute Maximum Ratings.

- a. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- b. The dominant wavelength, λ_d , is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- c. Radiant intensity, I_e , in watts/steradian, may be found from the equation $I_e = I_v/\eta_v$, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.

Precautions

Lead Forming

- Preform or cut the leads of an LED lamp to length before they are inserted and soldered into the PC board.
- If forming a lead is required before it is soldered, take care to avoid any excessive mechanical stress induced to the LED package. Otherwise, cut the LED leads to length after soldering at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- Make tooling precisely and cut the leads cut to length, rather than relying on your hand.

Soldering Conditions

- Take care during PCB assembly and soldering process to prevent damage to LED component.
- The closest an LED is allowed to be soldered on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Follow the recommended soldering conditions in this table.

	Wave Soldering	Manual Solder Dipping
Pre-heat Temperature	105°C Max.	—
Pre-heat Time	30s Max.	—
Peak Temperature	250°C Max.	260°C Max.
Dwell Time	3s Max.	5s Max.

- Set and maintain the wave soldering parameter according to the recommended temperature and dwell time in the solder wave. You are advised to periodically check the soldering profile to ensure the soldering profile used always conforms to recommended soldering condition.
- If necessary, use a fixture during soldering process to hold the LED component in the proper orientation with respect to the PCB.
- Handle the LED properly to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C, before handling.
- To ensure solderability, pay special attention to board fabrication, solder masking, surface plating, and lead hole size and component orientation.
- Follow the recommended PC board plated through-hole sizes for LED component leads in this table.

	LED Component Lead Size	Diagonal	Plated Through-Hole Diameter
Lead size (typ.)	0.45 × 0.45 mm (0.018 × 0.018 in.)	0.636 mm (0.025 in)	0.98 to 1.08 mm (0.039 to 0.043 in.)
Dambar shear-off area (max.)	0.65 mm (0.026 in.)	0.919 mm (0.036 in)	
Lead size (typ.)	0.50 × 0.50 mm (0.020 × 0.020 in.)	0.707 mm (0.028 in)	1.05 to 1.15 mm (0.041 to 0.045 in.)
Dambar shear-off area (max.)	0.70 mm (0.028 in.)	0.99 mm (0.039 in)	

NOTE Refer to application note AN1027 for more information on soldering LED components.
