

General Description

The JY1106 is a low dropout linear regulator (LDO) family with 600mA output current. The output voltage can be fixed or adjustable, and are stable with 1.0uF or higher value ceramic capacitors.

The JY1106 family provides several protections, such as over current protection (OCP), short circuit protection (SCP) and over temperature protection (OTP) to protect themselves from fault application conditions.

This family of LDOs have many different packages and pin assignments. The users can refer the ordering information of this datasheet to choice the most suitable LDOs for their applications.

Features

- Operating Input Voltage : 2.2V~5.5V
- Has Fixed Output Voltage (Fixed- V_{OUT}) And Adjustable Output Voltage (Adj- V_{OUT}) Options
- Output current is up to 600 mA
- Built-in Over Current Protection (OCP), Short Circuit Protection (SCP), and Over Temperature Protection (OTP)
- Package : SOT223-3L, SOT23-5L, SOP-8L and WDFN2020-6L Packages

Applications

- Portable Electronics
- Wireless Applications
- Battery Power Devices

Pin Descriptions

Pin Name	Pin Description
V _{IN}	Voltage input. The input capacitor in the range of 1uF to 10uF is sufficient.
GND	Ground
V _{OUT}	LDO Output
FB (Optional)	Feedback Input for Setting the Output Voltage. Connect to an external resistor divider for adjustable output operation.
EN (Optional)	Enable pin (Active High) A pull-high resistor is inside the IC. Need an external Logic-low source to disable the LDO.
NC	No connection

Note 1: CAUTION - To use the “accelerated equivalent” soak conditions, correlation of damage response (including electrical, after soak and reflow), should be established with the “standard” soak conditions. Alternatively, if the known activation energy for moisture diffusion of the package materials is in the range of 0.40 - 0.48 eV or 0.30 - 0.39 eV, the “accelerated equivalent” may be used. Accelerated soak times may vary due to material properties (e.g .mold compound, encapsulant, etc.). JEDEC document JESD22-A120 provides a method for determining the diffusion coefficient.

Note 2: The standard soak time includes a default value of 24 hours for semiconductor manufacturer’s exposure time (MET) between bake and bag and includes the maximum time allowed out of the bag at the distributor’s facility. If the actual MET is less than 24 hours the soak time may be reduced. For soak conditions of 30 °C/60% RH, the soak time is reduced by 1 hour for each hour the MET is less than 24 hours. For soak conditions of 60 °C/60% RH, the soak time is reduced by 1 hour for each 5 hours the MET is less than 24 hours. If the actual MET is greater than 24 hours the soak time must be increased. If soak conditions are 30 °C/60% RH, the soak time is increased 1 hour for each hour that the actual MET exceeds 24 hours. If soak conditions are 60 °C/60% RH, the soak time is increased 1 hour for each 5 hours that the actual MET exceeds 24 hours.
