NOTES:

1. The maximum current rating is package limited.

2. Single pulse width limited by junction temperature $T_{J(MAX)}$=150°C.

3. The power dissipation PD is based on $T_{J(MAX)}$=150°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

4. The value of $R_{\theta JC}$ is measured in a still air environment with T_A =25°C and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.

5. The $R_{\theta JA}$ is the sum of the thermal impedance from junction to case $R_{\theta JC}$ and case to ambient.

6. The EAS data shows Max. rating. The test condition is V_{DS}=50V, V_{GS}=10V, L=0.5mH

7. Guaranteed by design, not subject to production testing
