

### LAMP

### 234-15/T2C6-7QSA/R

#### Features

- Popular 3mm package.
- High luminous power.
- Typical chromaticity coordinates  $x=0.31$ ,  $y=0.30$  according to CIE1931.
- Bulk, available taped on reel.
- The product itself will remain within RoHS compliant version.
- Compliance with EU REACH
- Compliance Halogen Free .(Br <900 ppm ,Cl <900 ppm , Br+Cl < 1500 ppm)

#### Description

- The series is designed for application required high luminous intensity.
- The phosphor filled in the reflector converts the blue emission of InGaN chip to ideal white

#### Applications

- Message panels
- Optical Indicators
- Backlighting
- Marker Lights

## Device Selection Guide

Chip Materials	Emitted Color	Resin Color
InGaN	White	Water Clear

### Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit
Continuous Forward Current	I <sub>F</sub>	30	mA
Peak Forward Current (Duty 1/10 @ 1KHZ)	I <sub>FP</sub>	100	mA
Reverse Voltage	V <sub>R</sub>	5	V
Power Dissipation	P <sub>d</sub>	110	mW
Operating Temperature	T <sub>opr</sub>	-40 ~ +85	°C
Storage Temperature	T <sub>stg</sub>	-40 ~ +100	°C
Zener Reverse Current	I <sub>z</sub>	100	mA
Soldering Temperature	T <sub>sol</sub>	260 °C for 5 sec.	

### Electro-Optical Characteristics (Ta=25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Condition
Forward Voltage	V <sub>F</sub>	2.8	-----	3.6	V	I <sub>F</sub> =20mA
Zener Reverse Voltage	V <sub>Z</sub>	5.2	-----	-----	V	I <sub>z</sub> =5mA
Reverse Current	I <sub>R</sub>	-----	-----	50	μA	V <sub>R</sub> =5V
Luminous Intensity	I <sub>v</sub>	3600	----	7150	mcd	I <sub>F</sub> =20mA
Viewing Angle	2θ <sub>1/2</sub>	----	60	----	deg	I <sub>F</sub> =20mA
Chromaticity Coordinates	x	----	0.31	----	----	I <sub>F</sub> =20mA
	y	----	0.30	----	----	

### Bin Range of Luminous Intensity

Bin Code	Min.	Max.	Unit	Condition
N	3600	4500	mcd	I <sub>F</sub> =20mA
P	4500	5650		
Q	5650	7150		

Note:  
Tolerance of Luminous Intensity: ±10%

### Forward Voltage Combination

Bin Code	Min.	Max.	Unit	Condition
0	2.8	3.0	V	I <sub>F</sub> =20mA
1	3.0	3.2		
2	3.2	3.4		
3	3.4	3.6		

Note:  
Measurement Uncertainty of Forward Voltage : ±0.1V

### Color Combination ( at 20mA)

Group	Bins
7	B5+B6

CIE Chromaticity Diagram

**Color Ranks ( $I_f=20\text{mA}$  ,  $T_a=25^\circ\text{C}$ )**

Color Ranks		CIE			
B5	X	0.287	0.307	0.311	0.296
	Y	0.295	0.315	0.294	0.276
B6	X	0.307	0.33	0.33	0.311
	Y	0.315	0.339	0.318	0.294

\*Measurement uncertainty of the color coordinates :  $\pm 0.01$

EVERLIGHT

Typical Electro-Optical Characteristics Curves

Package Dimension

Note:

1. All dimensions are in millimeters, and tolerance is 0.25mm except being specified.
2. Lead spacing is measured where the lead emerges from the package.
3. Protruded resin under flange is 1.5mm Max. LED.

Tapping:

Notes:

1. All dimensions are in millimeters, tolerance is 0.25mm except being specified
2. Lead spacing is measured where the lead emerge from the package

Taping Sizes

Symbol Item	Symbol	Specifications		
		Avg		Tolerance
		mm	Inch	mm
貼帶進給孔直徑(Tape Feed Hole Diameter)	D	4.0	0.158	±0.2
零件腳位間距(Component Lead Pitch)	F	2.54	0.100	±0.5
前後偏斜度(Front-to-Read Deflection)	ΔH	2.0	0.079	Max
進給孔至膠體底部尺寸(Feed Hole to Button of Component)	H1	18.5	0.729	±1.0
進給孔至膠體頂部尺寸 (Feed Hole to Overall Component Height)	H2	23.5	0.926	±1.0
零件使用時切斷高度 (Lead Length after Component Removal)	L	11.0	0.433	Max
進給孔間之距離(Feed Hole Pitch)	P	12.7	0.500	±0.3
進給孔至腳位之距離(Lead Location)	P1	5.1	0.201	±0.7
進給孔至零件中心點之距離(Center of Component Location)	P2	6.3	0.248	±1.2
貼帶包裝後之厚度(Overall Taped Package Thickness)	T	1.42	0.056	Max
進給孔至貼帶上限距離(Feed Hole Location)	W0	9.0	0.355	±0.5
黏帶寬度(Adhesive Tape Width)	W1	13.0	0.512	±0.5
黏帶與貼帶間之距離(Adhesive Tape Position)	W2	2.0	0.789	Max
貼帶寬度(Tape Width)	W3	18.0	0.709	±0.75

Note: Tolerances unless mentioned ±0.1mm. Unit=mm

**Moisture Resistant Packing Materials**

**Label Explanation**

- CPN: Customer's Production Number
- P/N : Production Number
- QTY: Packing Quantity
- CAT: Ranks of Luminous Intensity and Forward Voltage
- HUE: Color Rank
- REF: Reference
- LOT No: Lot Number

**Packing Specification**

■ Anti-electrostatic Bag

■ Inner Carton

■ Outside Carton

■ Packing Quantity

1. 2500 PCS/1 Inner Carton.
- 2.10 Inner Cartons/1 Outside Carton

## Notes

### 1. Lead Forming

- During lead formation, the leads should be bent at a point at least 3mm from the base of the epoxy bulb.
- Lead forming should be done before soldering.
- Avoid stressing the LED package during leads forming. The stress to the base may damage the LED's characteristics or it may break the LEDs.
- Cut the LED leadframes at room temperature. Cutting the leadframes at high temperatures may cause failure of the LEDs.
- When mounting the LEDs onto a PCB, the PCB holes must be aligned exactly with the lead position of the LED. If the LEDs are mounted with stress at the leads, it causes deterioration of the epoxy resin and this will degrade the LEDs.

### 2. Storage

- The LEDs should be stored at 30°C or less and 70%RH or less after being shipped from Everlight and the storage life limits are 3 months. If the LEDs are stored for 3 months or more, they can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material.
- Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

### 3. Soldering

- Careful attention should be paid during soldering. When soldering, leave more than 3mm from solder joint to epoxy bulb, and soldering beyond the base of the tie bar is recommended.
- Recommended soldering conditions:

Hand Soldering		DIP Soldering	
Temp. at tip of iron	300°C Max. (30W Max.)	Preheat temp.	100°C Max. (60 sec Max.)
Soldering time	3 sec Max.	Bath temp. & time	260 Max., 5 sec Max
Distance	3mm Min.(From solder joint to epoxy bulb)	Distance	3mm Min. (From solder joint to epoxy bulb)

■ Recommended soldering profile

- Avoiding applying any stress to the lead frame while the LEDs are at high temperature particularly when soldering.
- Dip and hand soldering should not be done more than one time
- After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.
- A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- Although the recommended soldering conditions are specified in the above table, dip or handsoldering at the lowest possible temperature is desirable for the LEDs.
- Wave soldering parameter must be set and maintain according to recommended temperature and dwell time in the solder wave.

4. Cleaning

- When necessary, cleaning should occur only with isopropyl alcohol at room temperature for a duration of no more than one minute. Dry at room temperature before use.
- Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the LED

5. Circuit Protection

- Below the zener reference voltage  $V_z$ , all the current flows through LED and as the voltage rises to  $V_z$ , the zener diode "breakdown." If the voltage tries to rise above  $V_z$  current flows through the zener branch to keep the voltage at exactly  $V_z$ .
- When the LED is connected using serial circuit, if either piece of LED is no light up but current can't flow through causing others to light down. In new design, the LED is parallel with zener diode. if either piece of LED is no light up but current can flow through causing others to light up.

#### 6. Heat Management

- Heat management of LEDs must be taken into consideration during the design stage of LED application. The current should be de-rated appropriately by referring to the de-rating curve found in each product specification.
- The temperature surrounding the LED in the application should be controlled. Please refer to the data sheet de-rating curve.

#### 7. ESD (Electrostatic Discharge)

- The products are sensitive to static electricity or surge voltage. ESD can damage a die and its reliability. When handling the products, the following measures against electrostatic discharge are strongly recommended:

Eliminating the charge

Grounded wrist strap, ESD footwear, clothes, and floors

Grounded workstation equipment and tools

ESD table/shelf mat made of conductive materials

- Proper grounding is required for all devices, equipment, and machinery used in product assembly. Surge protection should be considered when designing of commercial products.

- If tools or equipment contain insulating materials such as glass or plastic, the following measures against electrostatic discharge are strongly recommended:

Dissipating static charge with conductive materials

Preventing charge generation with moisture

Neutralizing the charge with ionizers

**DISCLAIMER**

1. EVERLIGHT reserves the right(s) on the adjustment of product material mix for the specification.
2. The product meets EVERLIGHT published specification for a period of twelve (12) months from date of shipment.
3. The graphs shown in this datasheet are representing typical data only and do not show guaranteed values.
4. When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these specification sheets. EVERLIGHT assumes no responsibility for any damage resulting from the use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets.
5. These specification sheets include materials protected under copyright of EVERLIGHT. Reproduction in any form is prohibited without obtaining EVERLIGHT's prior consent.
6. This product is not intended to be used for military, aircraft, automotive, medical, life sustaining or life saving applications or any other application which can result in human injury or death. Please contact authorized Everlight sales agent for special application request.
