SGM8557-2XMS8G
15MHz, High Output Drive, High Precision, Low Noise Operational Amplifier

GENERAL DESCRIPTION

The SGM8557-2XMS8G is a dual, low noise, high precision CMOS operational amplifier that provides a high output current of 235mA, rail-to-rail output operation from a range of 2.7V to 5.5V single supply.

The SGM8557-2XMS8G offers low input offset voltage, low input offset voltage drift and high output current drive. The device also can achieve a high 15MHz gain-bandwidth product and a high 7V/μs slew rate.

The SGM8557-2XMS8G is specifically designed to drive high current load, such as 32Ω headset, V_{BIAS} of RF power amplifier, etc.

The SGM8557-2XMS8G is available in a Green MSOP-8 package. It operates over an ambient temperature range of -40℃ to +125℃.

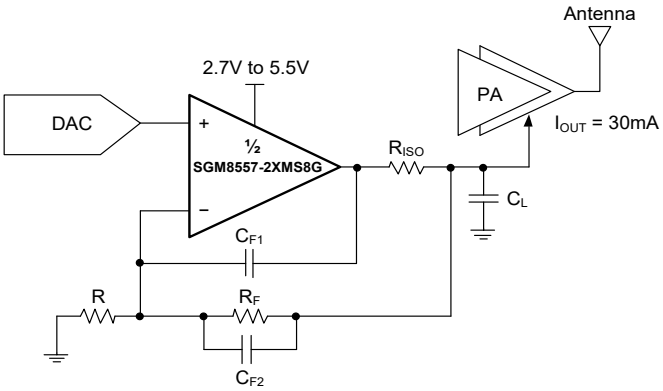
FEATURES

- **Output Drive Capability: 235mA**
- **Low Input Offset Voltage: 5μV (MAX)**
- **Low Input Offset Voltage Drift: 20nV/℃ (TYP)**
- **Low Noise: 30nV/$\sqrt{Hz}$ at 1kHz**
- **Gain-Bandwidth Product: 15MHz**
- **High Slew Rate: 7V/μs**
- **High Open-Loop Gain (R_L = 2kΩ): 135dB**
- **Power Supply Rejection Ratio: 121dB**
- **Over-Temperature Protection**
- **No Phase Reversal for Overdriven Inputs**
- **Rail-to-Rail Input and Output**
- **Supply Voltage Range: 2.7V to 5.5V**
- **Quiescent Current: 2.4mA (TYP)**
- **-40℃ to +125℃ Operating Temperature Range**
- **Available in a Green MSOP-8 Package**

APPLICATIONS

Battery-Powered Equipment
Audio System
Optical Module
DAC Buffer
Industrial Equipment

TYPICAL OPERATING CIRCUIT

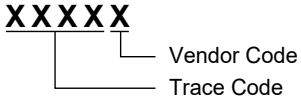


PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE MARKING	PACKING OPTION
SGM8557-2XMS8G	MSOP-8	-40℃ to +125℃	SGM8557-2XMS8G/TR	SGM85572 XMS8 XXXXX	Tape and Reel, 4000

MARKING INFORMATION

NOTE: XXXXX = Trace Code and Vendor Code.



Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, $+V_S$ to $-V_S$ 6V
All Other Pins ..... ($-V_S$) - 0.3V to ($+V_S$) + 0.3V
Package Thermal Resistance
MSOP-8, θ_{JA} ..... 162℃/W
Junction Temperature ..... +150℃
Storage Temperature Range ..... -65℃ to +150℃
Lead Temperature (Soldering, 10s) ..... +260℃
ESD Susceptibility
HBM 7000V
CDM 1000V

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range ..... -40℃ to +125℃
Operating Supply Voltage Range ..... 2.7V to 5.5V

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

APPLICATION INFORMATION

Single-Supply Stereo Headphone Driver

A single-supply stereo headphone driver is shown in Figure 1 as an example to explain the simplified design procedure.

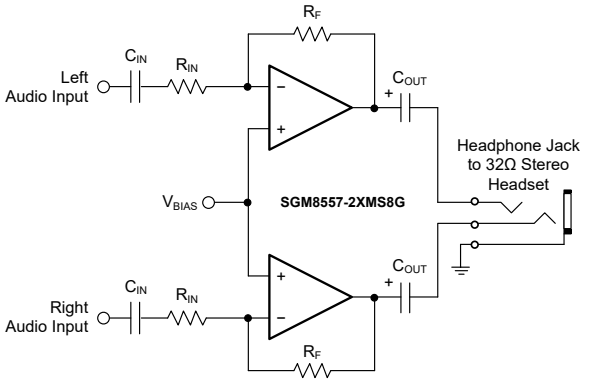

Figure 1. Stereo Headphone Driver

In this circuit, C_{IN} and R_{IN} form a high-pass filter, the DC bias is removed from the incoming signal. The -3dB point of the high-pass filter is using Equation 1:

$$f_{-3dB} = \frac{1}{2\pi R_{IN} C_{IN}} \quad (1)$$

The gain of driver is $-R_F/R_{IN}$. The C_{OUT} and the load impedance form a high-pass filter with the -3dB point determined by Equation 2:

$$f_{-3dB} = \frac{1}{2\pi R_L C_{OUT}} \quad (2)$$

Bridge Amplifier

A bridge amplifier circuit which can provide 200mW at 3V is shown in Figure 2. Due to differential output, this structure eliminates the large coupling capacitors in Figure 1. The voltage gain is 10V/V and the gain can be changed by changing R_2.

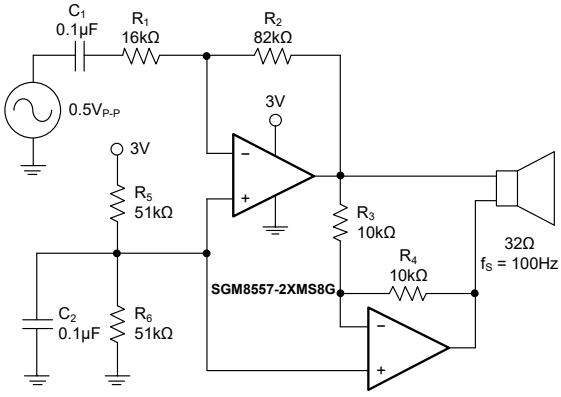

Figure 2. 200mW Bridge Amplifier at 3V

APPLICATIONS INFORMATION (continued)

Cancel Input Capacitance

The C_{IN} (20pF TYP) at inverting input pin will generate a pole at frequency $(2\pi R'C_{IN})^{-1}$, where R′ is the parallel combination of the gain-setting resistor for the inverting or non-inverting amplifier in Figure 3. If the pole-frequency is less than or comparable to the unity-gain bandwidth (15MHz), the phase margin will be reduced, ringing in the step response or sustained oscillation will be generated. To cancel this pole, C_F is used to compensate C_{IN} in Figure 3. Equation 3 gives the C_F feedback capacitance.

$$C_F = 8\times(R/R_F)\ pF \quad (3)$$

where:

R_F is the feedback resistor.
R is the gain-setting resistor.

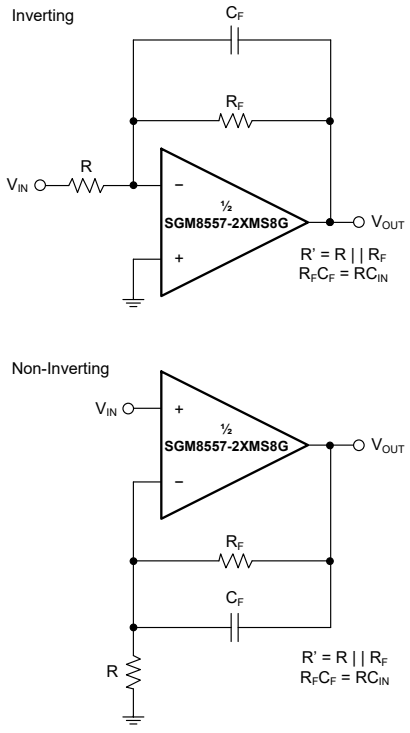

Figure 3. Inverting and Non-Inverting Amplifiers with C_F to Compensate C_{IN}

Input Current-Limit Protection

For ESD diode clamping protection, when the current flowing through ESD diode exceeds the maximum rating value, the ESD diode and amplifier will be damaged, so current-limit protection will be added in some applications. One resistor is selected to limit the current not to exceed the maximum rating value. In Figure 4, a series input resistor is used to limit the input current to less than 10mA, but the drawback of this current-limit resistor is to contribute thermal noise at the amplifier input. If this resistor must be added, its value must be selected as small as possible.

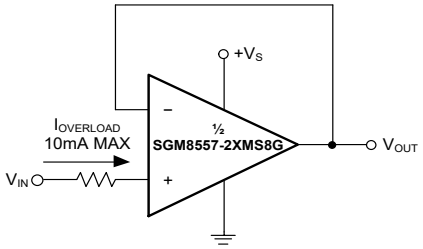

Figure 4. Input Current-Limit Protection

Rail-to-Rail Output

The SGM8557-2XMS8G supports rail-to-rail output operation. In single power supply application, for example, when $+V_S$ = 5V, $-V_S$ = GND, 2kΩ load resistor is tied from OUT pin to V_S/2, the typical output swing range is from 0.007V to 4.993V.

APPLICATIONS INFORMATION (continued)

Driving Capacitive Loads

The SGM8557-2XMS8G is designed for unity-gain stable for capacitive load up to 780pF. In Figure 5, it shows the transient response with capacitive load (C_L). If greater capacitive load must be driven in application, the circuit in Figure 6 can be used. In this circuit, the IR drop voltage generated by R_{ISO} is compensated by feedback loop.

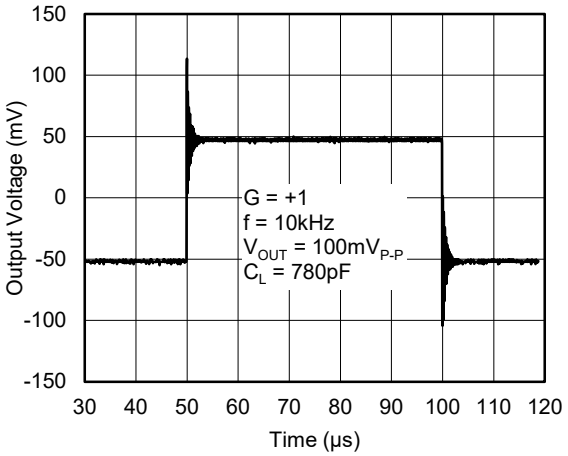

Figure 5. Small-Signal Transient Response (Capacitive Load)

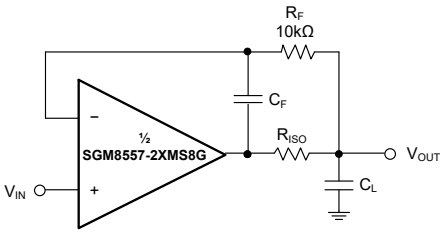

Figure 6. Circuit to Drive Capacitive Load

Power Supply Decoupling and Layout

A clean and low noise power supply is very important in amplifier circuit design, besides of input signal noise, the power supply is one of important source of noise to the amplifiers through $+V_S$ and $-V_S$ pins. Power supply bypassing is an effective method to clear up the noise at power supply, and the low impedance path to ground of decoupling capacitor will bypass the noise to GND. In application, 10μF ceramic capacitor paralleled with 0.1μF or 0.01μF ceramic capacitor is used in Figure 7. The ceramic capacitors should be placed as close as possible to $+V_S$ and $-V_S$ power supply pins.
