

5.0V Reference Diode

DESCRIPTION

The HT136-5.0/HT236-5.0/HT336-5.0 integrated circuits are precision 5.0V shunt regulator diodes. These monolithic IC voltage references operate as a low temperature coefficient 5.0V zener with 0.6Ω dynamic impedance. A third terminal on the HT136-5.0 allows the reference voltage and temperature coefficient to be trimmed easily.

The HT136-5.0 series is useful as a precision 5.0V lowvoltage reference for digital voltmeters, power supplies or op amp circuitry. The 5.0V makes it convenient to obtain a stable reference from low voltage supplies. Further, since the HT136-5.0 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

The HT136-5.0 is rated for operation over -55° C to +125° C while the HT236-5.0 is rated over a -25° C to +85° C temperature range. The HT336-5.0 is rated for operation over a 0° C to +70° C temperature range. See the connection diagrams for available packages. For applications requiring 2.5V see HT136-2.5.

FEATURES

- Adjustable 4V to 6V
- Low Temperature Coefficient
- Wide Operating Current of 600 μA to 10 mA
- 0.6Ω Dynamic Impedance
- ± 1% Initial Tolerance Available
- Specified Temperature Stability
- Easily Trimmed for Minimum Temperature • Fast Turn-on
- Three Lead Transistor Package

ELECTRICAL CHARACTERISTICS

| Parameter | Conditions | HT136A-5.0/HT236A-5.0 | | | HT336B-5.0 | | | Units |
|---------------------------------------|---|-----------------------|------|------|------------|------|-----|----------|
| | | HT136-5.0/HT236-5.0 | | | HT336-5.0 | | | |
| | | Min | Typ | Max | Min | Typ | Max | |
| Reverse Breakdown Voltage | $T_A=25^\circ\text{C}$, $I_R=1\text{ mA}$ | | | | | | | |
| | HT136-5.0/HT236-5.0/HT336-5.0 | 4.9 | 5.00 | 5.1 | 4.8 | 5.00 | 5.2 | V |
| | HT136A-5.0/HT236A-5.0, HT336B-5.0 | 4.95 | 5.00 | 5.05 | 4.90 | 5.00 | 5.1 | V |
| Reverse Breakdown Change With Current | $T_A=25^\circ\text{C}$, $600\ \mu\text{A} \leq I_R \leq 10\text{ mA}$ | | 6 | 12 | | 6 | 20 | mV |
| Reverse Dynamic Impedance | $T_A=25^\circ\text{C}$, $I_R=1\text{ mA}$, $f = 100\text{ Hz}$ | | 0.6 | 1.2 | | 0.6 | 2 | Ω |
| Temperature Stability ⁽²⁾ | V_R Adjusted 5.00V $I_R=1\text{ mA}$, $0^\circ\text{C} \leq T_A \leq 70^\circ\text{C}$ (HT336-5.0) | | | | | 4 | 12 | mV |

(1) Unless otherwise specified, the HT136-5.0 is specified from $-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$, the HT236-5.0 from $-25^\circ\text{C} \leq T_A \leq +85^\circ\text{C}$ and the HT336-5.0 from $0^\circ\text{C} \leq T_A \leq +70^\circ\text{C}$.

(2) Temperature stability for the HT336 and HT236 family is specified by design. Design limits are specified (but not 100% percent production tested) over the indicated temperature and supply voltage ranges. These limits are not used to calculate outgoing quality levels. Stability is defined as the maximum change in V_{REF} from 25°C to $T_A(\text{min})$ or $T_A(\text{max})$.

TYPICAL PERFORMANCE CHARACTERISTICS (continued)

Figure 13.

The HT136-5.0 series voltage references are much easier to use than ordinary zener diodes. Their low impedance and wide operating current range simplify biasing in almost any circuit. Further, either the breakdown voltage or the temperature coefficient can be adjusted to optimize circuit performance.

Figure 14 shows an HT136-5.0 with a 10k potentiometer for adjusting the reverse breakdown voltage. With the addition of R1 the breakdown voltage can be adjusted without affecting the temperature coefficient of the device. The adjustment range is usually sufficient to adjust for both the initial device tolerance and inaccuracies in buffer circuitry.

If minimum temperature coefficient is desired, four diodes can be added in series with the adjustment potentiometer as shown in Figure 15. When the device is adjusted to 5.00V the temperature coefficient is minimized. Almost any silicon signal diode can be used for this purpose such as a 1N914, 1N4148 or a 1N457. For proper temperature compensation the diodes should be in the same thermal environment as the HT136-5.0. It is usually sufficient to mount the diodes near the HT136-5.0 on the printed circuit board. The absolute resistance of the network is not critical and any value from 2k to 20k will work. Because of the wide adjustment range, fixed resistors should be connected in series with the pot to make pot setting less critical.
