

## High-Voltage, High-Precision, Current-Sense Amplifier

### 1. FEATURES

- 0V to 76V input common mode
- Low  $5\mu\text{V}$  (typ) input offset voltage
- Low 0.1% (max) gain error
- Low power consumption: 0.3mA
- Gain options
  - $G = 10\text{V/V}$  (CSA220-10)
  - $G = 20\text{V/V}$  (CSA220-20)
  - $G = 50\text{V/V}$  (CSA220-50)
  - $G = 100\text{V/V}$  (CSA220-100)
- SOT23-5 package

### 2. APPLICATIONS

- Base stations and communication equipment
- Power management systems
- Server backplanes
- Industrial control and automation
- Battery current sensing

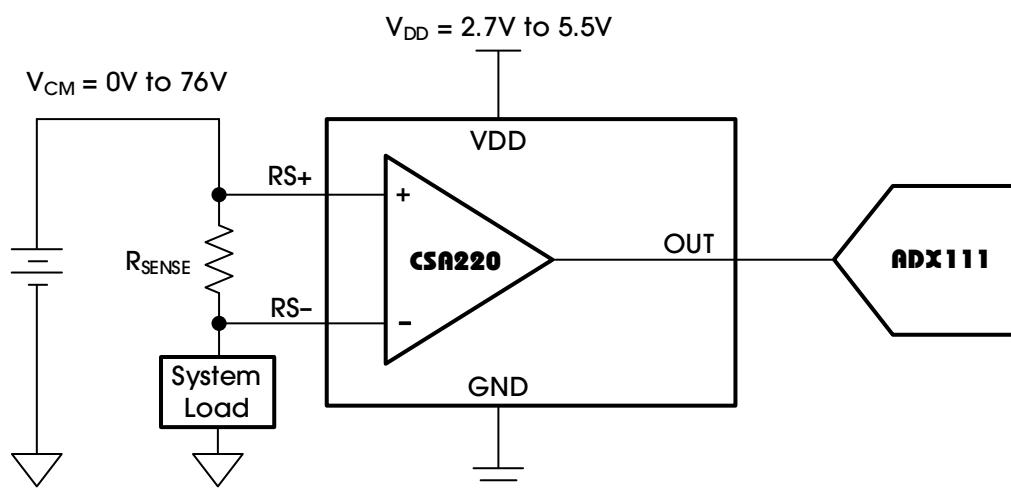

### 3. DESCRIPTION

The CSA220 high-side current-sense amplifier has precision accuracy specifications of  $V_{OS}$  less than  $60\mu\text{V}$  (max) and gain error less than 0.1% (max).

The CSA220 features an input common-mode voltage range from 0V to 76V with 50kHz of small-signal bandwidth, which makes it ideal for interfacing with an ADC for multichannel multiplexed data acquisition systems.

Low power consumption and small package make the CSA220 ideal for portable devices.

The CSA220 operates over the  $-40^\circ\text{C}$  to  $125^\circ\text{C}$  temperature range. See [Table 1](#) for the order information.

**Table 1** lists the order information.

Devices can be ordered via the following two ways:

1. Place orders directly on our website ([www.analogysemi.com](http://www.analogysemi.com)), or;
2. Contact our sales team by mailing to [sales@analogysemi.com](mailto:sales@analogysemi.com).

Note 1:

Note 2: Available in the future.

## 4. PIN CONFIGURATION AND FUNCTIONS

Figure 1 illustrates the pin configuration.

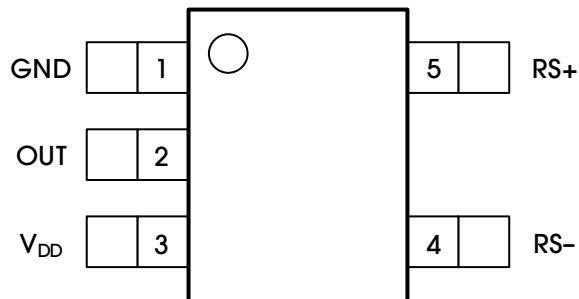

Figure 1. Pin Configuration

Table 3 lists the pin functions.

Table 3. Pin Functions

POSITION	NAME	TYPE	DESCRIPTION
1	GND	Power	Ground
2	OUT	Output	Output
3	V <sub>DD</sub>	Power	Supply voltage, connecting at least 100nF capacitor to GND.
4	RS-	Input	External resistor load-side connection
5	RS+	Input	External resistor power-side connection

## 5. SPECIFICATIONS

### 5.1 ABSOLUTE MAXIMUM RATINGS

**Table 4** lists the absolute maximum ratings of the CSA220.

**Table 4. Absolute Maximum Ratings**

PARAMETER	DESCRIPTION		MIN	MAX	UNITS
Voltage	$V_{DD}$ to GND		-0.3	6.0	V
	RS+, RS- to GND		-0.3	80	
	RS+ to RS-	1s maximum duration due to package thermal dissipation	-80	80	
Current	Continuous input current (any pin)		-20	20	mA
Temperature	Operating, $T_A$		-40	125	°C
	Junction, $T_J$			150	
	Storage, $T_{stg}$		-65	150	
	Lead (soldering, 10s)			300	
	Soldering (reflow)			260	

Note: Stresses beyond those listed under **Table 4** may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under **Table 6**. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 5.2 ESD RATINGS

**Table 5** lists the ESD ratings of the CSA220.

**Table 5. ESD Ratings**

PARAMETER	SYMBOL	DESCRIPTION	VALUE	UNITS
Electrostatic Discharge	$V_{(ESD)}$	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 6000$	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 1000$	

Note 1: The JEDEC document JEP155 indicates that 500V HBM allows safe manufacturing with a standard ESD control process.

Note 2: The JEDEC document JEP157 indicates that 250V CDM allows safe manufacturing with a standard ESD control process.

## 5.3 RECOMMENDED OPERATING CONDITIONS

Table 6 lists the recommended operating conditions for the CSA220.

Table 6. Recommended Operating Conditions

PARAMETER	SYMBOL	MIN	NOM	MAX	UNITS
<b>POWER SUPPLY</b>					
Power Supply, V <sub>DD</sub> to GND		2.7	3.3	5.5	V
<b>ANALOG INPUTS</b>					
Input Voltage Range, (RS+) - (RS-)	V <sub>IN</sub>		V <sub>DD</sub> / Gain		V
Absolute Input Voltage		GND		76	V
<b>TEMPERATURE RANGE</b>					
Operating Ambient Temperature	T <sub>A</sub>	-40		125	°C

## 5.4 THERMAL INFORMATION

Table 7 lists the thermal information for the CSA220.

Table 7. Thermal Information

PARAMETER	SYMBOL	SOT23-5	UNITS
Junction-to-Ambient Thermal Resistance	R <sub>θJA</sub>	168	°C/W
Junction-to-Board Thermal Resistance	R <sub>θJB</sub>	39	°C/W
Junction-to-Case (Top) Thermal Resistance	R <sub>θJC(top)</sub>	103	°C/W
Junction-to-Case (Bottom) Thermal Resistance	R <sub>θJC(bot)</sub>	66	°C/W
Junction-to-Top Characterization Parameter	Ψ <sub>JT</sub>	10	°C/W
Junction-to-Board Characterization Parameter	Ψ <sub>JB</sub>	36	°C/W

## 5.5 ELECTRICAL CHARACTERISTICS

Table 8 lists the electrical characteristics of the CSA220.  $V_{RS+} = V_{RS-} = 76V$ ,  $V_{DD} = 3.3V$ ,  $V_{SENSE} = V_{RS+} - V_{RS-} = 1mV$ ,  $T_A = -40^\circ C$  to  $125^\circ C$ , unless otherwise noted. Typical values are at  $T_A = 25^\circ C$ <sup>(1)</sup>.

Table 8. Electrical Characteristics

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
<b>DC CHARACTERISTICS</b>						
Supply Voltage	$V_{DD}$	Guaranteed by PSRR	2.7		5.5	V
Supply Current	$I_{DD}$	$T_A = 25^\circ C$		300	385	$\mu A$
		$-40^\circ C < T_A < 125^\circ C$			400	
Power-Supply Rejection Ratio	PSRR	$2.7V \leq V_{DD} \leq 5.5V$	105	130		dB
Input Common-Mode Voltage Range	$V_{CM}$	Guaranteed by CMRR	0		76	V
Input Bias Current at $V_{RS+}$ and $V_{RS-}$ <sup>(2)</sup>	$I_{RS+}, I_{RS-}$				40	nA
Input Offset Current <sup>(2)</sup>	$I_{RS+} - I_{RS-}$				80	nA
Input Leakage Current <sup>(2)</sup>	$I_{RS+}, I_{RS-}$	$V_{DD} = 0V, V_{RS+} = V_{RS-} = 76V$			0.04	$\mu A$
Common-Mode Rejection Ratio	CMRR	$0V < V_{RS+} < 76V$	130	157		dB
Input Offset Voltage <sup>(3)</sup>	$V_{OS}$	$T_A = 25^\circ C$		$\pm 5$		$\mu V$
		$-40^\circ C \leq T_A \leq 125^\circ C$		$\pm 20$	$\pm 60$

Gain <sup>(3)</sup>	G	CSA220-10		10		$V/V$
		CSA220-20		20		
		CSA220-50		50		
		CSA220-100		100		
Gain Error <sup>(2)</sup>	GE	$T_A = 25^\circ C$		0.02	0.1	%
		$-40^\circ C \leq T_A \leq 85^\circ C$			0.16	
		$-40^\circ C \leq T_A \leq 125^\circ C$			0.25	
Output Low Voltage	$V_{OL}$	Sink 500 $\mu A$			10	mV
		No load			4	
Output High Voltage	$V_{OH}$	Source 500 $\mu A$	$V_{DD} - 0.01$			V
<b>AC CHARACTERISTICS</b>						
Signal Bandwidth	BW -3dB	All gain configurations $V_{SENSE} > 5mV$		50		kHz
Slew Rate	SR			0.2		$V/\mu s$
Capacitive Load Stability	$C_{LOAD}$	With 250 $\Omega$ isolation resistor		20		nF
		Without any isolation resistor		500		pF
Input Voltage-Noise Density	en	$f = 1kHz$		68		$nV/\sqrt{Hz}$
Input Voltage-Noise		0.1Hz to 10Hz		2.8		$\mu V_{PP}$

Note 1: All devices are 100% production tested at  $T_A = 25^\circ C$ . All temperature limits are guaranteed by design.

Note 2: Specifications are guaranteed by design, not production tested.

Note 3: Gain and offset voltage are calculated based on two-point measurements:  $V_{SENSE1}$  and  $V_{SENSE2}$ .

$$V_{SENSE1} = 20\% \times \text{Full-Scale } V_{SENSE}, V_{SENSE2} = 80\% \times \text{Full-Scale } V_{SENSE}.$$

## 6. TYPICAL CHARACTERISTICS

$V_{RS+} = V_{RS-} = 76V$ ,  $V_{DD} = 3.3V$ ,  $V_{SENSE} = V_{RS+} - V_{RS-} = 1mV$ ,  $T_A = 25^\circ C$ , unless otherwise noted.

## 7. DETAILED DESCRIPTION

### 7.1 OVERVIEW

The CSA220 high-side, current-sense amplifier features a 0V to 76V input common-mode range that is independent of supply voltage. This feature allows the monitoring of current out of a battery as low as 0V and enables high-side current sensing at voltages greater than the supply voltage ( $V_{DD}$ ). The CSA220 monitors current through a current-sense resistor and amplifies the voltage across the resistor.

High-side current monitoring does not interfere with the ground path of the load being measured, making the CSA220 particularly useful in a wide range of high-voltage systems.

### 7.2 FUNCTIONAL BLOCK DIAGRAM

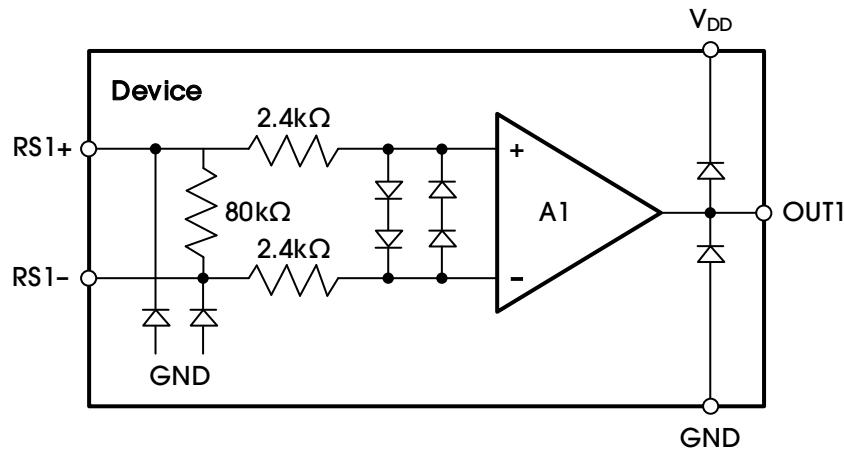

Figure 12. Functional Block Diagram

## 8. APPLICATION AND IMPLEMENTATION

### NOTE

The information provided in this section is not part of the AnalogSemi component specification. Hence, AnalogSemi does not warrant its completeness or accuracy. Customers are responsible for determining suitability of components and system functionality for their applications. Validation and testing should be performed prior to design implementation.

### 8.1 APPLICATION INFORMATION

#### 8.1.1 RECOMMENDED COMPONENT VALUES

Ideally, the maximum load current develops the full-scale sense voltage across the current-sense resistor. Power  $V_{DD}$  with typical 3.3V, and choose the gain needed to yield the maximum output voltage required for the application:

$$V_{OUT} = V_{SENSE} \times A_V \quad (1)$$

Where  $V_{SENSE}$  is the full-scale sense voltage, 330mV for gain of 10V/V, 165mV for gain of 20V/V, 66mV for gain of 50V/V, 33mV for gain of 100V/V, and  $A_V$  is the gain of the device.

In applications monitoring a high current, ensure that  $R_{SENSE}$  is able to dissipate its own  $I^2R$  loss. If the resistor's power dissipation exceeds the nominal value, its value may drift or it may fail altogether. The CSA220 senses a wide variety of currents with different sense-resistor values.

#### 8.1.2 CHOOSING THE SENSE RESISTOR

Choose  $R_{SENSE}$  based on the following criteria:

- Voltage Loss:** A high  $R_{SENSE}$  value causes the power-source voltage to degrade through IR loss. For minimal voltage loss, use the lowest  $R_{SENSE}$  value.
- Accuracy:** A high  $R_{SENSE}$  value allows lower currents measured more accurately. This is due to offsets becoming less significant when the sense voltage is larger. For best performance, while using 3.3V for  $V_{DD}$ , select  $R_{SENSE}$  to provide approximately 330mV (gain of 10V/V), 165mV (gain of 20V/V), or 66mV (gain of 50V/V), 33mV (gain of 100V/V) of sense voltage for the full-scale current in each application.
- Efficiency and Power Dissipation:** At high current levels, the  $I^2R$  losses in  $R_{SENSE}$  can be significant. Consider this when choosing the resistor value and its power dissipation (wattage) rating. In addition, the sense resistor's value might drift if it heats up excessively.
- Inductance:** Keep inductance low if  $I_{SENSE}$  has a large high-frequency component. Wire-wound resistors have the highest inductance, while metal film is somewhat better. Low-inductance, metal-film resistors are also available. Instead of being spiral wrapped around a core, as in metal-film or wire wound resistors, they are a straight band of metal and are available in values under  $1\Omega$ .

Take care to eliminate parasitic trace resistance from causing errors in the sense voltage because of the high currents that flow through  $R_{SENSE}$ . Either use a four-terminal current-sense resistor or use Kelvin (sense and sense) PCB layout techniques.

### 8.2 POWER-SUPPLY BYPASSING

Power-supply bypass capacitors are recommended for best performance and should be placed as close as possible to the supply and ground terminals of the device. A typical value for this supply bypass capacitor is  $0.1\mu F$  (NP0/C0G type) close to the  $V_{DD}/GND$  pins. The capacitors should be rated for at least twice the maximum expected applied voltage. Applications with noisy or high-impedance power supplies may require additional decoupling capacitors to reject power-supply noise.

## 9. PACKAGE INFORMATION

The CSA220 is available in the SOT23-5 package. Figure 13 shows the package view.

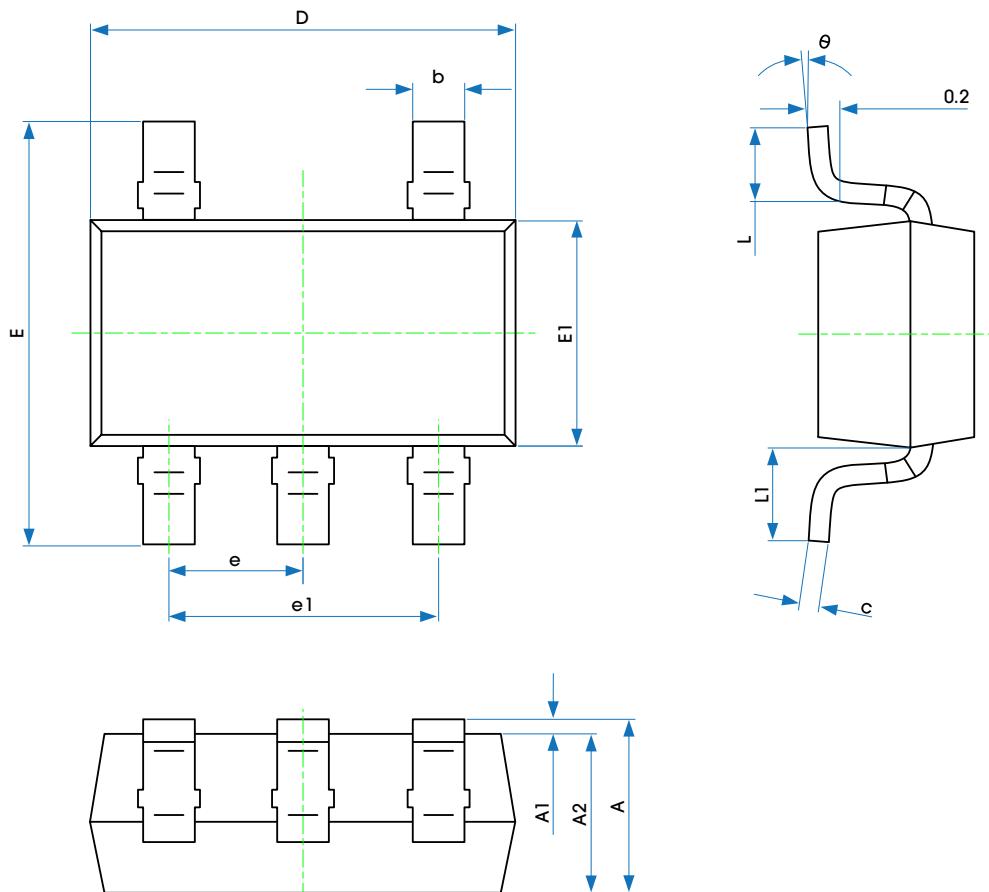

Figure 13. Package View

Table 9 provides detailed information about the dimensions of the package.

Table 9. Dimensions of the Package
