3 引脚电压监控器
具备高态有效的推挽复位功能

查询样品: TLV810M, TLV810R, TLV810S, TLV810Z

特性

- **3** 引脚 **SOT23** 封装
- 电源电流：**9 μA**（典型值）
- 高精度电源电压监视器：
  2.5 V、**3 V**、**3.3 V**、**5 V**
- 具有 **200 ms** 固定延迟时间的上电复位发生器
- 与 **MAX810** 引脚对引脚兼容
- 温度范围：**–40°C** 至 **+125°C**
- 推挽，复位输出

应用

- **DSP**、微控制器和微处理器
- 无线通信系统
- 便携式/电池供电型设备
- 可编程逻辑控制器
- 智能仪器
- 工业设备
- 笔记本电脑及台式电脑
- 汽车系统

说明

此TLV810 监控电路系列可提供电路初始化及定时监控功能，主要面向基于DSP 和处理器的系统。

在上电期间，RESET 在如下条件下被置为有效，即：当电源电压 (V_{DD}) 变至高于1.1 V时 。 其后，监控电路将监视 V_{DD} 并将 RESET 保持在运行状态 — 只 要 V_{DD} 保持低于门限电压 V_{IT} 即可。 一个内部定时器负责延迟输出恢复至待机状态（低电平），以确保正确的系统复位。 延迟时间 ($t_{d(typ)}$ = 200 ms) 在 V_{DD} 上升至高于门限电压 V_{IT} 之后起始。 当电源电压降至 V_{IT} 门限电压以下时，输出重新变至运行（低电平）状态。无需外部组件。 该系列中的所有器件都具有一个由内部分压器设定的固定检测门限电压 (V_{IT})。

该产品系列专为 2.5 V、3 V、3.3 V 和 5 V 电源电压而设计。这些监控集成电路采用 3 引脚 SOT-23 封装。TLV810 器件针对 −40℃ 至 +125℃ 温度范围内的运作进行了特性分析。

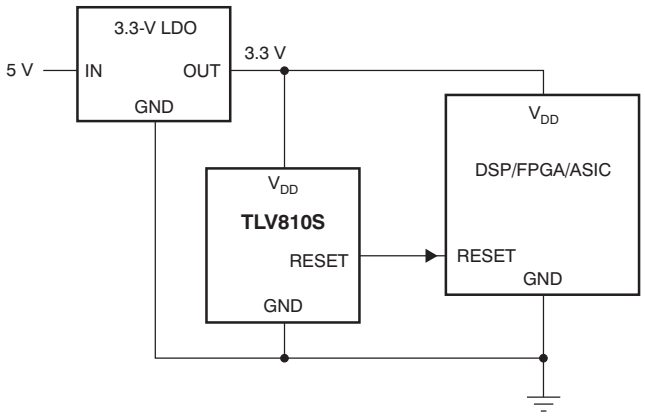
典型应用



This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to GND. For reliable operation the device should not be operated at 7 V for more than t = 1000h continuously.

APPLICATION INFORMATION

V_{DD} TRANSIENT REJECTION

The TLV810 has built-in rejection of fast transients on the V_{DD} pin. The rejection of transients depends on both the duration and the amplitude of the transient. The amplitude of the transient is measured from the bottom of the transient to the negative threshold voltage of the TLV810, as shown in Figure 7.

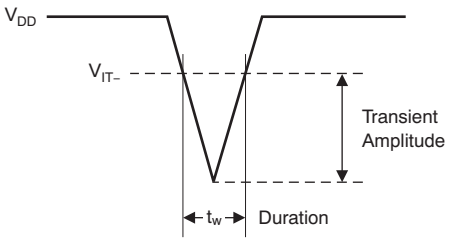

Figure 7. Voltage Transient Measurement

The TLV810 does not respond to transients that are fast duration/low amplitude or long duration/small amplitude. Figure 5 shows the relationship between the transient amplitude and the duration needed to trigger a reset. Any combination of duration and amplitude above the curve generates a reset signal.

RESET DURING POWER UP/DOWN

The TLV810 output is valid when V_{DD} is greater than 1.1 V. When V_{DD} is less than 1.1 V, the output is undefined. Figure 8 shows a typical waveform for the power-up sequence.

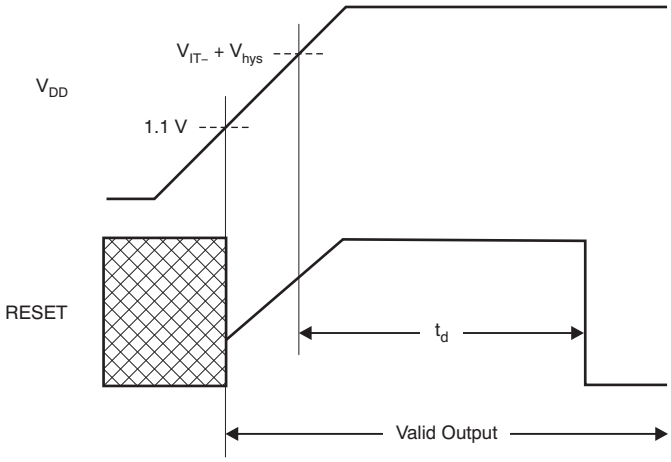

Figure 8. Power-Up Response

BIDIRECTIONAL RESET PINS

Some microcontrollers have bidirectional reset pins that act as both inputs and outputs. In a situation where both the TLV810 and the microcontroller are attempting to drive the RESET line, a series resistor should be placed between the output of the TLV810 and the RESET pin of the microcontroller to protect against excessive current flow. Figure 9 shows the connection of the TLV810 to a microcontroller using a series resistor to drive a bidirectional RESET line.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
