

## LMH0302 3Gbps HD/SD SDI 电缆驱动器

### 1 特性

- 支持 ST 424 (3G)、292 (HD) 和 259 (SD)
- 数据速率高达 2.97Gbps
- 支持 DVB-ASI (270Mbps 时)
- 100Ω 差分输入
- 75Ω 单端输出
- 可选转换率
- 输出驱动器掉电控制
- 3.3V 单电源运行
- 工业温度范围: -40°C 至 85°C
- 典型功耗: 125mW (SD 模式), 165mW (HD 模式)
- 16 引脚超薄型四方扁平无引线 (WQFN) 封装
- 封装与 LMH0002SQ 兼容
- 替代 Gennum GS2978

### 2 应用

- ST 424、ST 292、ST 344 和 ST 259 串行数字接口
- 数字视频路由器和交换机
- 分布式放大器

### 3 说明

LMH0302 3Gbps HD/SD SDI 电缆驱动器设计用于 ST 424、ST 292、ST 344 和 ST 259 串行数字视频应用。LMH0302 以高达 2.97Gbps 的数据速率驱动 75Ω 传输线路 (Belden 1694A、Belden 8281 或等效电缆)。

LMH0302 提供有两种可选转换率, 以符合 ST 259 和 ST 424/292。输出驱动器可通过输出驱动器使能引脚实现掉电。

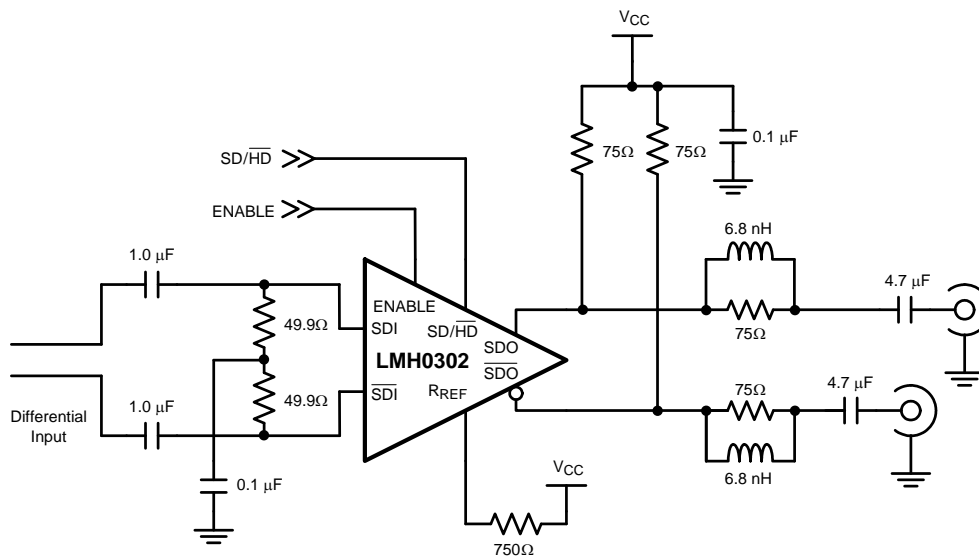

LMH0302 由 3.3V 单电源供电运行。SD 模式下的典型功耗为 125mW; HD 模式下的典型功耗为 165mW。LMH0302 采用 16 引脚 WQFN 封装。

## 5 Pin Configuration and Functions

### Pin Functions

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
ENABLE	6	I	Output driver enable. When low, the SDO/ $\overline{\text{SDO}}$ output driver is powered off. ENABLE has an internal pullup. H = Normal operation. L = Output driver powered off.
EP	—	G	EP is the exposed pad at the bottom of the WQFN package. The exposed pad must be connected to the ground plane through a via array. See <a href="#">Figure 6</a> for details.
NC	5, 7, 8, 13, 14, 15, 16	—	No connect. Not bonded internally.
$R_{\text{REF}}$	4	I	Output driver level control. Connect a resistor to $V_{\text{CC}}$ to set output voltage swing.
$\text{SD}/\overline{\text{HD}}$	10	I	Output slew rate control. Output rise/fall time complies with ST 424 or 292 when low and ST 259 when high.
SDI	1	I	Serial data true input.
$\overline{\text{SDI}}$	2	I	Serial data complement input.
SDO	12	O	Serial data true output.
$\overline{\text{SDO}}$	11	O	Serial data complement output.
$V_{\text{CC}}$	9	P	Positive power supply (3.3 V).
$V_{\text{EE}}$	3	G	Negative power supply (ground).

(1) G = Ground, I = Input, O = Output, and P = Power

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage	-0.5	3.6	V
Input voltage (all inputs)	-0.3	$V_{CC} + 0.3$	V
Output current		28	mA
Lead temperature, soldering (4 s)		260	°C
Junction temperature, $T_J$		125	°C
Storage temperature, $T_{stg}$	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±2000	
	Machine model (MM)	±250	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	NOM	MAX	UNIT
Supply voltage ( $V_{CC} - V_{EE}$ )	3.13	3.3	3.46	V
Operating junction temperature			100	°C
Operating free air temperature, $T_A$	-40	25	85	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LMH0302	UNIT
		RUM (WQFN)	
		16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	47.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	47.2	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	25.6	°C/W
$\psi_{JT}$	Junction-to-top characterization parameter	1.7	°C/W
$\psi_{JB}$	Junction-to-board characterization parameter	25.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	14.5	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

### 6.5 Electrical Characteristics – DC

Over supply voltage and operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{CMIN}$ Input common mode voltage	SDI, $\overline{SDI}$	$1.1 + V_{SDI}/2$		$V_{CC} - V_{SDI}/2$	V
$V_{SDI}$ Input voltage swing	Differential, SDI, $\overline{SDI}$	100		2200	mV <sub>P-P</sub>

- (1) Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to  $V_{EE} = 0$  V.  
 (2) Typical values are stated for  $V_{CC} = 3.3$  V and  $T_A = 25^\circ\text{C}$ .

## Electrical Characteristics – DC (continued)

Over supply voltage and operating free-air temperature range (unless otherwise noted) <sup>(1)(2)</sup>

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V <sub>CMOUT</sub>	Output common mode voltage	V <sub>CC</sub> – V <sub>SDO</sub>			V
V <sub>SDO</sub>	Output voltage swing	720	800	880	mV <sub>P-P</sub>
V <sub>IH</sub>	Input voltage high level	SD/ $\overline{HD}$ , ENABLE			V
V <sub>IL</sub>	Input voltage low level	SD/ $\overline{HD}$ , ENABLE			V
I <sub>CC</sub>	Supply current	SD/ $\overline{HD}$ = 0, SDO/ $\overline{SDO}$ enabled		50	59
		SD/ $\overline{HD}$ = 0, SDO/ $\overline{SDO}$ disabled		26	33
		SD/ $\overline{HD}$ = 1, SDO/ $\overline{SDO}$ enabled		38	48
		SD/ $\overline{HD}$ = 1, SDO/ $\overline{SDO}$ disabled		15	22

## 6.6 Electrical Characteristics – AC

Over supply voltage and operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT	
DR <sub>SDI</sub>	Input data rate	SDI, $\overline{SDI}$			2970	Mbps
T <sub>jit</sub>	Additive jitter	2.97 Gbps, SDO, $\overline{SDO}$		20	pSP-P	
		1.485 Gbps, SDO, $\overline{SDO}$		18		
		270 Mbps, SDO, $\overline{SDO}$		15		
t <sub>r</sub> , t <sub>f</sub>	Output rise time, fall time	SD/ $\overline{HD}$ = 0, 20% – 80%, SDO, $\overline{SDO}$		90	130	ps
		SD/ $\overline{HD}$ = 1, 20% – 80%, SDO, $\overline{SDO}$		400	800	
T <sub>MATCH</sub>	Mismatch in rise time, fall time	SD/ $\overline{HD}$ = 0, SDO, $\overline{SDO}$		30		ps
		SD/ $\overline{HD}$ = 1, SDO, $\overline{SDO}$		50		
T <sub>DCCD</sub>	Duty cycle distortion	SD/ $\overline{HD}$ = 0, 2.97 Gbps, SDO, $\overline{SDO}$ <sup>(2)</sup>		27		ps
		SD/ $\overline{HD}$ = 0, 1.485 Gbps, SDO, $\overline{SDO}$ <sup>(2)</sup>		30		
		SD/ $\overline{HD}$ = 1, SDO, $\overline{SDO}$ <sup>(2)</sup>		100		
T <sub>OS</sub>	Output overshoot	SD/ $\overline{HD}$ = 0, SDO, $\overline{SDO}$ <sup>(2)</sup>		10%		
		SD/ $\overline{HD}$ = 1, SDO, $\overline{SDO}$ <sup>(2)</sup>		8%		
RL <sub>SDO</sub>	Output return loss	5 MHz to 1.5 GHz, SDO, $\overline{SDO}$ <sup>(3)</sup>		15		dB
		1.5 GHz to 3.0 GHz, SDO, $\overline{SDO}$ <sup>(3)</sup>		10		

(1) Typical values are stated for V<sub>CC</sub> = 3.3 V and T<sub>A</sub> = 25°C.

(2) Specification is ensured by characterization.

(3) Output return loss is dependent on board design. The LMH0302 meets this specification on the SD302 evaluation board.

## 6.7 Typical Characteristics

Typical device characteristics at T<sub>A</sub> = 25°C and V<sub>CC</sub> = 3.3 V (unless otherwise noted)

Figure 1. SDO PRBS10 at 2.97 Gbps

Figure 2. SDO PRBS10 at 1.485 Gbps

## 7 Detailed Description

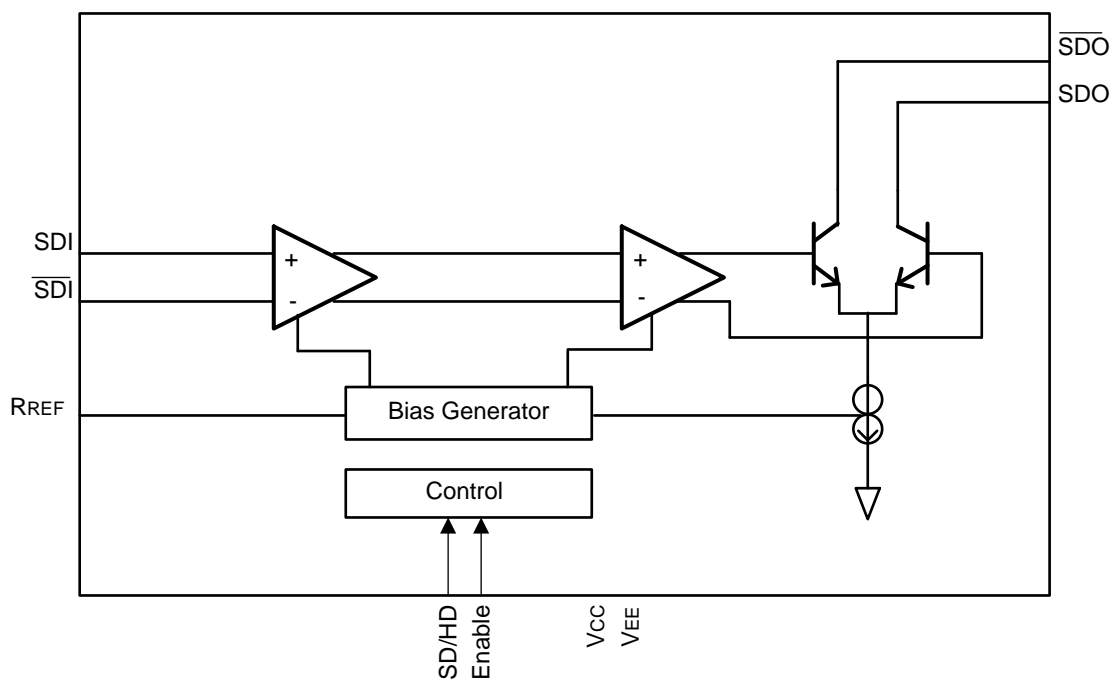

### 7.1 Overview

The LMH0302 ST 424, ST292, ST259 serial digital cable driver is a monolithic, high-speed cable driver designed for use in serial digital video data transmission applications. The LMH0302 drives 75-Ω transmission lines (Belden 8281, 1694A, Canare L-5CFB, or equivalent) at data rates up to 2.97 Gbps.

The LMH0302 provides two selectable slew rates for ST 259 and ST 292/424 compliance. The output voltage swing is adjustable through a single external resistor ( $R_{REF}$ ).

The LMH0302 is powered from a single 3.3-V supply. Power consumption is typically 125 mW in SD mode and 165 mW in HD mode. The LMH0302 is available in a 16-pin WQFN package.

### 7.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

### 7.3 Feature Description

The LMH0302 data path consists of several key blocks:

- Input interfacing
- Output interfacing
- Output slew rate control
- Output enable

#### 7.3.1 Input Interfacing

The LMH0302 accepts either differential or single-ended input. The inputs are self-biased, allowing for simple AC or DC coupling. DC-coupled inputs must be kept within the specified common-mode range.

#### 7.3.2 Output Interfacing

The LMH0302 uses current mode outputs. Single-ended output levels are 800 mV<sub>P-P</sub> into 75-Ω AC-coupled coaxial cable with an  $R_{REF}$  resistor of 750 Ω. The  $R_{REF}$  resistor is connected between the  $R_{REF}$  pin and  $V_{CC}$ .

## Feature Description (continued)

The  $R_{REF}$  resistor must be placed as close as possible to the  $R_{REF}$  pin. In addition, the copper in the plane layers below the  $R_{REF}$  network must be removed to minimize parasitic capacitance.

### 7.3.3 Output Slew Rate Control

The LMH0302 output rise and fall times are selectable for either ST 259, ST 424, or 292 compliance through the  $\overline{SD/HD}$  pin. For slower rise and fall times, or ST 259 compliance,  $\overline{SD/HD}$  is set high. For faster rise and fall times, ST 424 and ST 292 compliance,  $\overline{SD/HD}$  is set low.

### 7.3.4 Output Enable

The  $\overline{SDO/SDO}$  output driver are enabled or disabled with the ENABLE pin. When set low, the output driver is powered off. ENABLE has an internal pullup.

## 7.4 Device Functional Modes

The LMH0302 features are programmed using pin mode only.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The LMH0302 is a single-channel SDI cable driver that supports different application spaces. The following sections describe the typical use cases and common implementation practices.

#### 8.1.1 General Guidance for All Applications

The SMPTE specifications define the use of AC-coupling capacitors for transporting uncompressed serial data streams with heavy low-frequency content. This specification requires the use of a 4.7- $\mu\text{F}$  AC-coupling capacitor to avoid low frequency DC wander. The 75- $\Omega$  signal is also required to meet certain rise and fall timing to facilitate highest eye opening for the receiving device.

SMPTE specifies the requirements for the Serial Digital Interface to transport digital video at SD, HD, 3 Gbps, and higher data rates over coaxial cables. One of the requirements is meeting the required return loss. This requirement specifies how closely the port resembles 75- $\Omega$  impedance across a specified frequency band. Output return loss is dependent on board design. The LMH0302 supports these requirements.

### 8.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

**Figure 3. Application Circuit**

## Typical Application (continued)

### 8.2.1 Design Requirements

For the LMH0302 design example, [Table 1](#) lists the design parameters.

**Table 1. LMH0302 Design Parameters**

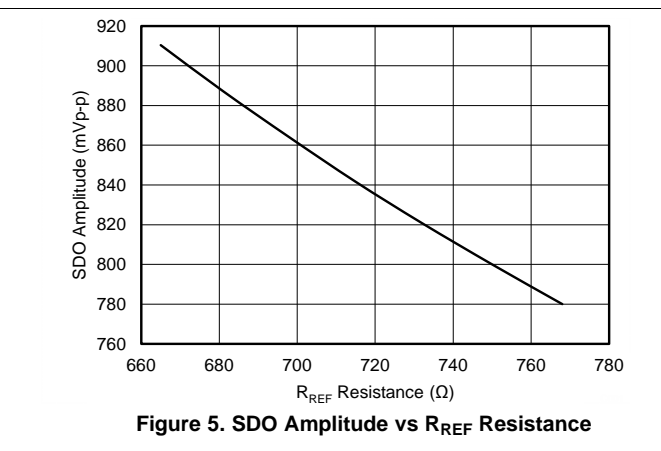

PARAMETER	REQUIREMENT
Input termination	Required; 49.9 $\Omega$ are recommended (see <a href="#">Figure 3</a> ).
Output AC-coupling capacitors	Required; both SDO and $\overline{\text{SDO}}$ require AC-coupling capacitors. SDO AC-coupling capacitors are expected to be 4.7 $\mu\text{F}$ to comply with SMPTE wander requirement.
DC power supply coupling capacitors	To minimize power supply noise, place 0.1- $\mu\text{F}$ capacitor as close to the device $V_{\text{CC}}$ pin as possible.
Distance from device to BNC	Keep this distance as short as possible.
High speed SDI and $\overline{\text{SDI}}$ trace impedance	Design differential trace impedance of SDI and $\overline{\text{SDI}}$ with 100 $\Omega$ .
High speed SDO and $\overline{\text{SDO}}$ trace impedance	Single-ended trace impedance for SDO and $\overline{\text{SDO}}$ with 75 $\Omega$ .

### 8.2.2 Detailed Design Procedure

The following design procedure is recommended:

1. Select a suitable power supply voltage for the LMH0302. It can be powered from a single 3.3-V supply.
2. Check that the power supply meets the DC requirements in [Electrical Characteristics – DC](#).
3. Select the proper pull-high or pull-low for SD/ $\overline{\text{HD}}$  to set the slew rate.
4. Select proper pull-high or pull-low for ENABLE to enable or disable the output driver.
5. Choose a high-quality 75- $\Omega$  BNC that is capable to support 2.97-Gbps applications. Consult a BNC supplier regarding insertion loss, impedance specifications, and recommended BNC footprint for meeting SMPTE return loss requirements.
6. Choose small 0402 surface-mount ceramic capacitors for the AC-coupling and bypass capacitors.
7. Use proper footprint for BNC and AC-coupling capacitors. Anti-pads are commonly used in power and ground planes under these landing pads to achieve optimum return loss.

### 8.2.3 Application Curves

## 9 Power Supply Recommendations

Follow these general guidelines when designing the power supply:

1. The power supply must be designed to provide the recommended operating conditions (see [Recommended Operating Conditions](#)).
2. The maximum current draw for the LMH0302 is provided in [Electrical Characteristics – DC](#). This figure can be used to calculate the maximum current the supply must provide.
3. The LMH0302 does not require any special power supply filtering, provided the recommended operating conditions are met. Only standard supply coupling is required.

## 10 Layout

### 10.1 Layout Guidelines

TI recommends the following layout guidelines for the LMH0302:

1. The  $R_{REF}$  1% tolerance resistor must be placed as close as possible to the  $R_{REF}$  pin. In addition, the copper in the plane layers below the  $R_{REF}$  network must be removed to minimize parasitic capacitance.
2. Choose a suitable board stackup that supports 75- $\Omega$  single-ended trace and 100- $\Omega$  differential trace routing on the top layer of the board. This is typically done with a Layer 2 ground plane reference for the 100- $\Omega$  differential traces and a second ground plane at Layer 3 reference for the 75- $\Omega$  single-ended traces.
3. Use single-ended uncoupled trace designed with 75- $\Omega$  impedance for signal routing to SDO and  $\overline{SDO}$ . The trace width is typically 8-10 mil reference to a ground plane at Layer 3.
4. Use coupled differential traces with 100- $\Omega$  impedance for signal routing to SDI and  $\overline{SDI}$ . They are usually 5-mil to 8-mil trace width reference to a ground plane at Layer 2.
5. Place anti-pad (ground relief) on the power and ground planes directly under the 4.7- $\mu$ F AC-coupling capacitor, return loss network, and IC landing pads to minimize parasitic capacitance. The size of the anti-pad depends on the board stackup and can be determined by a 3-dimension electromagnetic simulation tool.
6. Use a well-designed BNC footprint to ensure the BNC's signal landing pad achieves 75- $\Omega$  characteristic impedance. BNC suppliers usually provide recommendations on BNC footprint for best results.
7. Keep trace length short between the BNC and SDO. The trace routing for SDO and  $\overline{SDO}$  must be symmetrical, approximately equal lengths, and equal loading.
8. The exposed pad EP of the package must be connected to the ground plane through an array of vias. These vias are solder-masked to avoid solder flow into the plated-through holes during the board manufacturing process.
9. Connect each supply pin ( $V_{CC}$  and  $V_{EE}$ ) to the power or ground planes with a short via. The via is usually placed tangent to the landing pads of the supply pins with the shortest trace possible.
10. Power-supply bypass capacitors must be placed close to the supply pins.

## 12 机械、封装和可订购信息

以下页中包括机械、封装和可订购信息。这些信息是针对指定器件可提供的最新数据。这些数据会在无通知且不对本文档进行修订的情况下发生改变。欲获得该数据表的浏览器版本，请查阅左侧的导航栏。

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LMH0302SQ/NOPB	ACTIVE	WQFN	RUM	16	1000	RoHS & Green	SN	Level-3-260C-168 HR	-40 to 85	L0302	<a href="#">Samples</a>
LMH0302SQE/NOPB	ACTIVE	WQFN	RUM	16	250	RoHS & Green	SN	Level-3-260C-168 HR	-40 to 85	L0302	<a href="#">Samples</a>
LMH0302SQX/NOPB	ACTIVE	WQFN	RUM	16	4500	RoHS & Green	SN	Level-3-260C-168 HR	-40 to 85	L0302	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## 重要声明和免责声明

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做任何明示或暗示的担保，包括但不限于对适销性、某特定用途方面的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他功能安全、信息安全、监管或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的应用。严禁对这些资源进行其他复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。您应全额赔偿因在这些资源的使用中对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，TI 对此概不负责。

TI 提供的产品受 [TI 的销售条款](#) 或 [ti.com](#) 上其他适用条款/TI 产品随附的其他适用条款的约束。TI 提供这些资源并不会扩展或以其他方式更改 TI 针对 TI 产品发布的适用的担保或担保免责声明。

TI 反对并拒绝您可能提出的任何其他或不同的条款。
