具有过压检测和保护功能的 TMUX1072 双通道 2:1 模拟多路复用器

1 特性

- 电源电压范围为 2.3V 至 5.5V
- 关断保护：当 V_{CC} = 0V 时，I/O 引脚处于高阻抗状态
- 借助故障指示引脚进行 6V 过压和过热检测
- 通用引脚上具有 18V 过压保护 (OVP)
- 支持高于 V_{CC} 且高达 5.5V 的信号
- 低至 6Ω 的 R_{ON}
- 典型带宽为 1.2GHz
- 典型 C_{ON} 为 4.5pF
- 低功耗禁用模式
- 1.8V 兼容型逻辑输入
- ESD 保护性能超出 JESD22 标准
  - 2000V 人体放电模型 (HBM)
- 提供小型 2.00mm x 1.70mm QFN 封装

2 应用

- 数据采集 (DAQ)
- 现场仪器
- 视频监控
- HVAC 系统
- 后置摄像头

3 说明

TMUX1072 是一款高速双通道 2:1 模拟开关，具有集成的高压检测和断电保护功能。该器件是一款双向器件，可用作 2:1 或 1:2 开关，同时支持高于 V_{CC}（最高可达 5.5V）的信号。

TMUX1072 的 I/O 引脚上的保护功能可承受最高 18V 的电压，并配备自动关闭电路，以防止开关后面的系统组件受损。该保护功能用于电源定序。系统中的某些电路板可能会在其他电路板准备好接收信号之前通电。该器件可检测过压和过热事件，并通过 $\overline{FLT}$ 引脚提供开漏输出信号。

器件信息(1)

器件型号	封装	封装尺寸（标称值）
TMUX1072	UQFN (12)	2.00mm × 1.70mm
	VSSOP (10)	3.00mm x 5.00mm

(1) 如需了解所有可用封装，请参阅数据表末尾的可订购产品附录。

Pin Functions

PIN			I/O	DESCRIPTION
NAME	RUT	DGS		
SEL1	1	1	I	Switch select 1
NO1	2	2	I/O	Signal path NO1
GND	3	3	GND	Ground
NO2	4	4	I/O	Signal path NO2
SEL2	5	5	I	Switch select 2
$\overline{OE}$	6	-	I	Output enable (Active low)
COM2	7	6	I/O	Common signal path 2
NC2	8	7	I/O	Signal path NC2
VCC	9	8	PWR	Supply Voltage
NC1	10	9	I/O	Signal path NC1
COM1	11	10	I/O	Common signal path 1
$\overline{FLT}$	12	-	O	Fault indicator output pin (Active low) - open drain. If feature is unused, pin may be left floating or connected to ground

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1) (2)

			MIN	MAX	UNIT
V_{CC}	Supply voltage(3)		–0.5	6	V
$V_{I/O}$	Input/Output DC voltage (COM1, COM2)(3)		–0.5	20	V
	Input/Output DC voltage (NC1, NO1, NC2, NO2) (3)		–0.5	6	V
V_I	Digital input voltage (SEL1, SEL2, $\overline{OE}$)		–0.5	6	V
V_O	Digital output voltage ($\overline{FLT}$)		–0.5	6	V
I_K	Input-output port diode current (COM1, COM2,NC1, NO1, NC2, NO2)	V_{IN} < 0	–50		mA
I_{IK}	Digital logic input clamp current (SEL1, SEL2, $\overline{OE}$) (3)	V_I < 0	–50		mA
I_{CC}	Continuous current through VCC			100	mA
I_{GND}	Continuous current through GND		–100		mA
T_{stg}	Storage temperature		–65	150	°C
T_J	Operating Junction Temperature		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
(3) All voltages are with respect to ground, unless otherwise specified.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

			MIN	MAX	UNIT
V_{CC}	Supply voltage		2.3	5.5	V
$V_{I/O}$	Analog input/output	COM1, COM2	0	18	V
$V_{I/O}$		(NC1, NO1, NC2, NO2)	0	5.5	V
$I_{I/O}$		COM1, COM2	-50	50	mA
$I_{I/O}$		(NC1, NO1, NC2, NO2)	-50	50	mA
V_I	Digital input voltage	SEL1, SEL2, $\overline{OE}$	0	5.5	V
V_O	Digital output voltage	$\overline{FLT}$	0	5.5	V
$I_{I/O}$	Analog input/output port continuous current	(COM1, COM2, NC1, NO1, NC2, NO2)	-50	50	mA
I_{OL}	Digital output current			3	mA
T_A	Operating free-air temperature		–40	125	ºC
T_J	Junction temperature		–40	125	ºC

6.4 Thermal Information

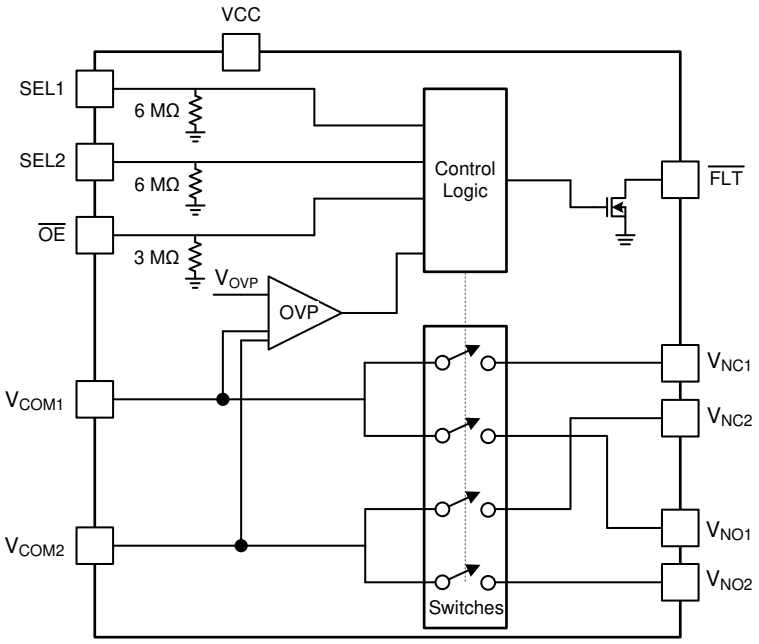
8 Detailed Description

8.1 Overview

The TMUX1072 is a high speed, 2-channel 2:1 analog switch with overvoltage protection. The device is bidirectional and can be used as a dual 2:1 or 1:2 switch, but OVP only applies to the COM pins. The device also contains a fault indicator pin which can signal to the system of either an over voltage or over temperature event.

The device maintains excellent signal integrity through the optimization of both R_{ON} and BW while protecting the system with up to 18 V OVP protection. The OVP implementation is designed to protect sensitive system components behind the switch that cannot survive fault conditions.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Powered-off Protection

When the TMUX1072 is powered off the I/Os of the device remain in a high-Z state. The crosstalk, off-isolation, and leakage remain within the *Electrical Specifications*

This prevents errant voltages from reaching the rest of the system and maintains isolation when the system is powering up.

8.3.2 Overvoltage Detection

When a voltage on the COM pin exceeds the V_{OVP_TH}, the open drain output $\overline{FLT}$pin pulls the pin low to indicate an overvoltage event has been detected. The open drain output will release the $\overline{FLT}$ pin when the voltage on the COM pin returns below the V_{OVP_TH}.

8.3.3 Overtemperature Detection

When the junction temperature of the device exceeds the overtemperature detection threshold T_{OTD_TH}, the open drain output $\overline{FLT}$ pin pulls the pin low to indicate an overtemperature event has been detected. The open drain output releases the $\overline{FLT}$ pin when the junction temperature returns below the T_{OTD_TH}.

8.3.4 Overvoltage Protection

The OVP of the TMUX1072 is designed to protect the system from overvoltage conditions up to 18 V on the COM1 and COM2 pins. This protection is valid even if Vcc = 0V. 图 15 depicts an event where up to 18 V could appear on COM1 and COM2 that could pass through the device and damage components behind the device.

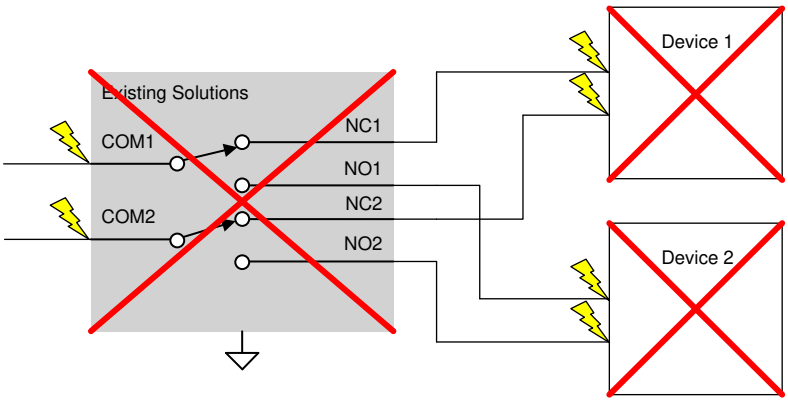


图 15. Existing Solution Being Damaged by a Short, 18 V

The TMUX1072 opens the switches and protect the rest of the system by blocking the 18 V as depicted in 图 16.

Feature Description (接下页)

图 17 is a waveform showing the voltage on the pins during an overvoltage scenario.

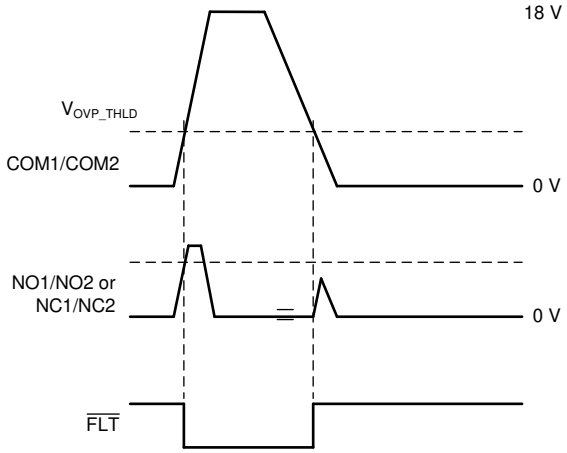

图 17. Overvoltage Protection Waveform, 18 V

8.4 Device Functional Modes

8.4.1 Pin Functions

表 1. Function Table

$\overline{OE}$	SEL1	SEL2	COM1 Connection	COM2 Connection
H	X	X	High-Z	High-Z
L	L	L	COM1 to NC1	COM2 to NC2
L	L	H	COM1 to NC1	COM2 to NO2
L	H	L	COM1 to NO1	COM2 to NC2
L	H	H	COM1 to NO1	COM2 to NO2

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

There are many applications in which processors and microcontrollers have a limited number of I/Os. This IC can effectively expand the limited number of I/Os by switching between multiple signal paths in order to interface them to a single processor or microcontroller. The device can also be used to connect a single microcontroller to two signal paths. With independent control of the two switches using SEL1 and SEL2, TMUX1072 can be used to cross switch single ended signals.

9.2 Typical Application

The TMUX1072 is used to switch signals between the high speed signal paths that may be exposed to a connector or near a bus which could experience an overvoltage condition. The TMUX1072 has internal pull-down resistors on SEL1, SEL2, and $\overline{OE}$. The pull-down on SEL1 and SEL2 pins ensure the NC1/NC2 channel is selected by default. The pull-down on $\overline{OE}$ enables the switch when power is applied.

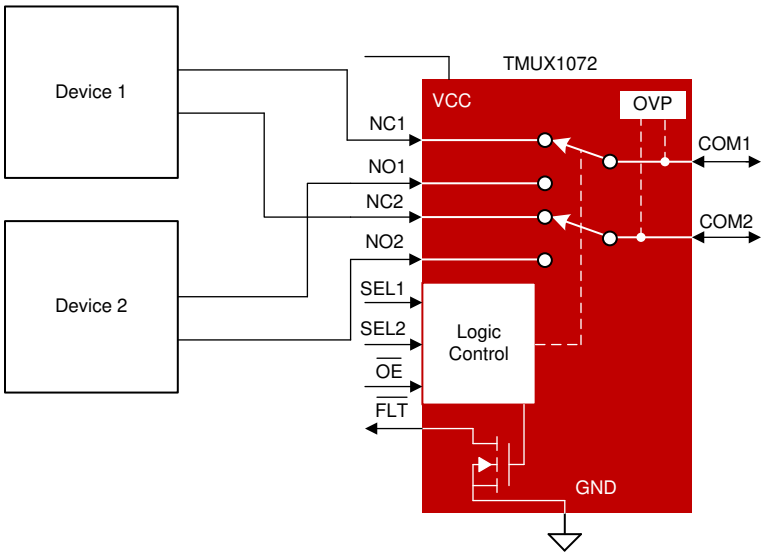

图 18. Typical TMUX1072 Application

9.2.1 Design Requirements

The TMUX1072 has internal pull-down resistors on SEL1, SEL2, and $\overline{OE}$, so no external resistors are required on the logic pins. The internal pull-down resistor on SEL1 and SEL2 pins ensures the NC1 and NC2 channels are selected by default. The internal pull-down resistor on $\overline{OE}$ enables the switch when power is applied to VCC.

The $\overline{FLT}$ indicator output pin is an open drain output that will require an external pull-up resistor for the overvoltage and overtemperature condition to be detected. If feature is unused, $\overline{FLT}$ pin may be left floating or connected to ground

9.2.2 Detailed Design Procedure

The TMUX1072 can be properly operated without any external components. However, TI recommends that unused signal pins must be connected to ground through a 50-Ω resistor to prevent signal reflections back into the device. TI does recommend a 100-nF bypass capacitor placed close to TMUX1072 VCC pin.

Typical Application (接下页)

9.2.3 Application Curves

Bandwidth is defined as the range of frequencies that are attenuated by less than 3 dB when the input is applied to the source pin of an on-channel, and the output is measured at the drain pin of the TMUX1072. 图 19 shows the bandwidth of TMUX1072.

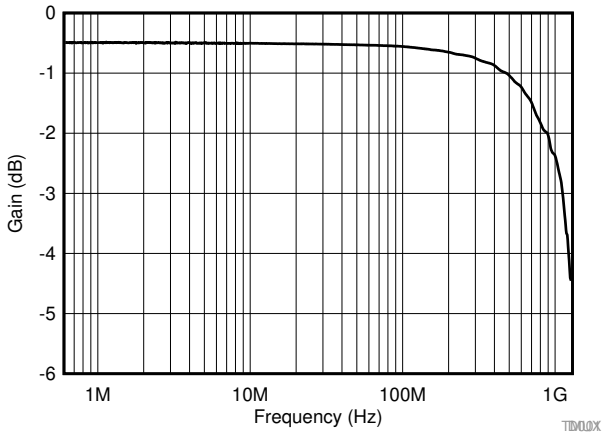

图 19. Bandwidth and Insertion Loss vs Frequency

10 Power Supply Recommendations

Power to the device is supplied through the VCC pin. TI recommends placing a 100-nF bypass capacitor as close to the supply pin VCC as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

1. Place supply bypass capacitors as close to VCC pin as possible and avoid placing the bypass caps near the signal traces.
2. The high-speed traces should always be of equal length and must be no more than 4 inches; otherwise, the eye diagram performance may be degraded.
3. Route the high-speed signals using a minimum of vias and corners which will reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the transmission line of the signal and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.
4. When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.
5. Do not route signal traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices, or IC's that use or duplicate clock signals.
6. Avoid stubs on the high-speed signals because they cause signal reflections.
7. Route all high-speed signal traces over continuous planes (VCC or GND), with no interruptions.
8. Avoid crossing over anti-etch, commonly found with plane splits.
9. For high frequency systems, a printed circuit board with at least four layers is recommended: two signal layers separated by a ground layer and a power layer. The majority of signal traces should run on a single layer, preferably Signal 1. Immediately next to this layer should be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies. For more information on layout guidelines, see High Speed Layout Guidelines (SCAA082)

12.5 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。 精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

12.6 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 机械、封装和可订购信息

以下页面包含机械、封装和可订购信息。这些信息是指定器件的最新可用数据。数据如有变更，恕不另行通知，且不会对此文档进行修订。如需获取此数据表的浏览器版本，请查阅左侧的导航栏。

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMUX1072DGSR	ACTIVE	VSSOP	DGS	10	2500	RoHS & Green	NIPDAUAG	Level-1-260C-UNLIM	-40 to 125	1A9	Samples
TMUX1072RUTR	ACTIVE	UQFN	RUT	12	3000	RoHS & Green	NIPDAUAG	Level-1-260C-UNLIM	-40 to 125	1BU	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

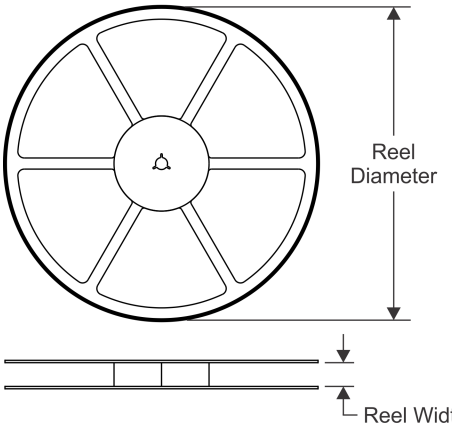
(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

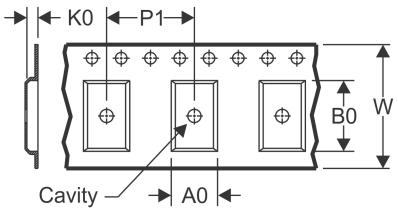
(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

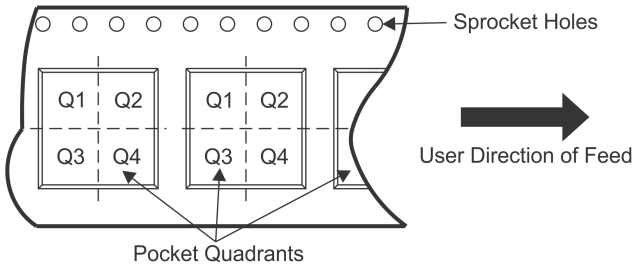


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

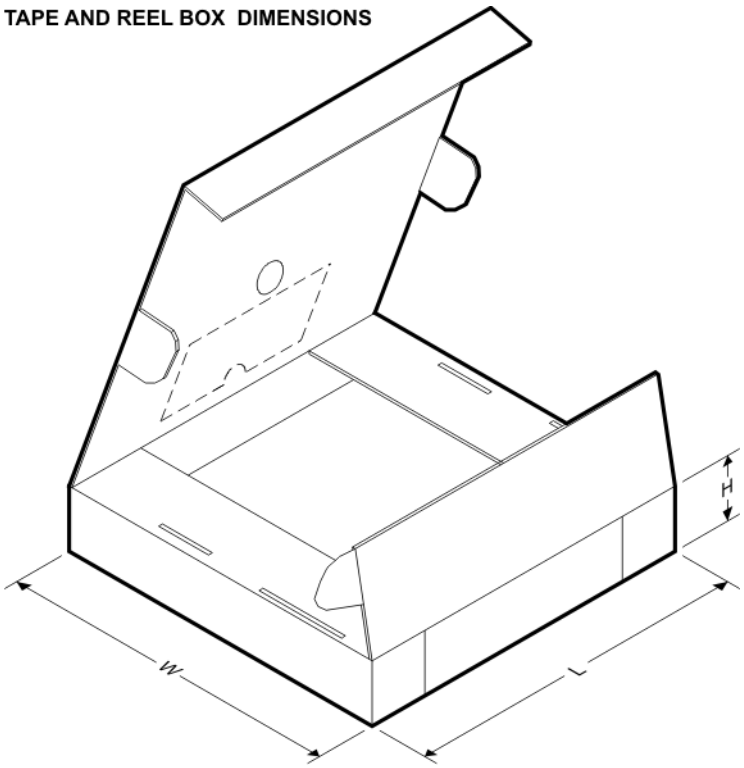
QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TMUX1072DGSR	VSSOP	DGS	10	2500	330.0	12.4	5.3	3.4	1.4	8.0	12.0	Q1
TMUX1072RUTR	UQFN	RUT	12	3000	180.0	9.5	1.9	2.2	0.7	4.0	8.0	Q1

TAPE AND REEL BOX DIMENSIONS



*All dimensions are nominal

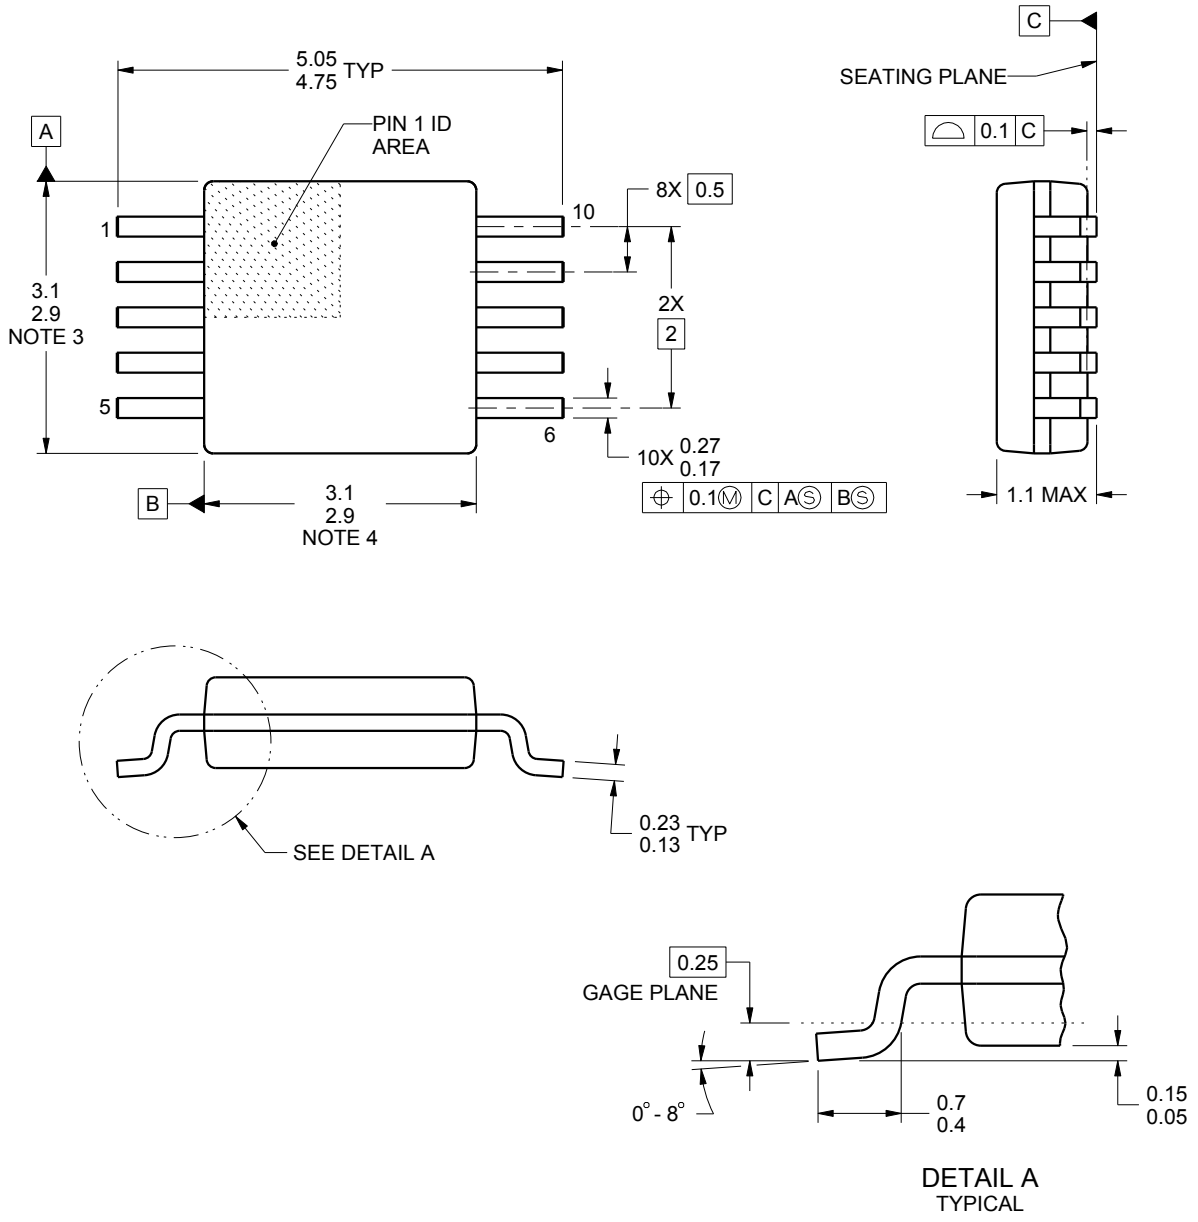
Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TMUX1072DGSR	VSSOP	DGS	10	2500	364.0	364.0	27.0
TMUX1072RUTR	UQFN	RUT	12	3000	189.0	185.0	36.0

PACKAGE OUTLINE

DGS0010A

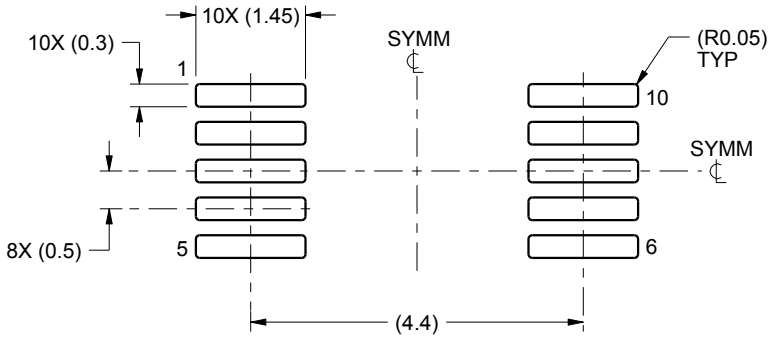
VSSOP - 1.1 mm max height

SMALL OUTLINE PACKAGE

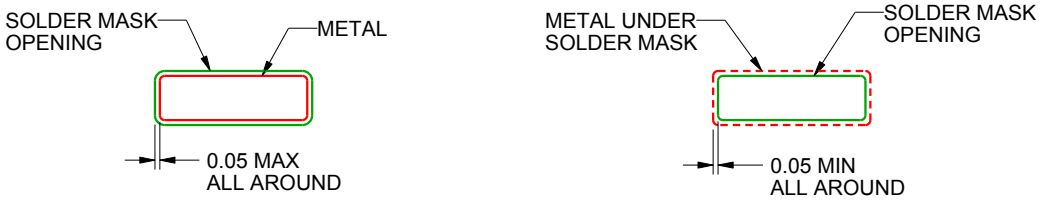


NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-187, variation BA.



LAND PATTERN EXAMPLE
SCALE:10X

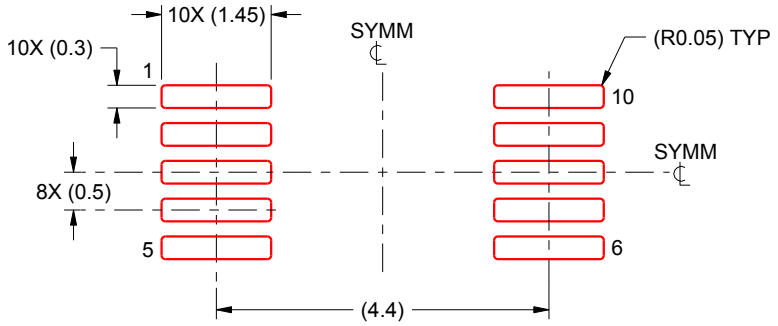


SOLDER MASK DETAILS
NOT TO SCALE

4221984/A 05/2015

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:10X

4221984/A 05/2015

NOTES: (continued)

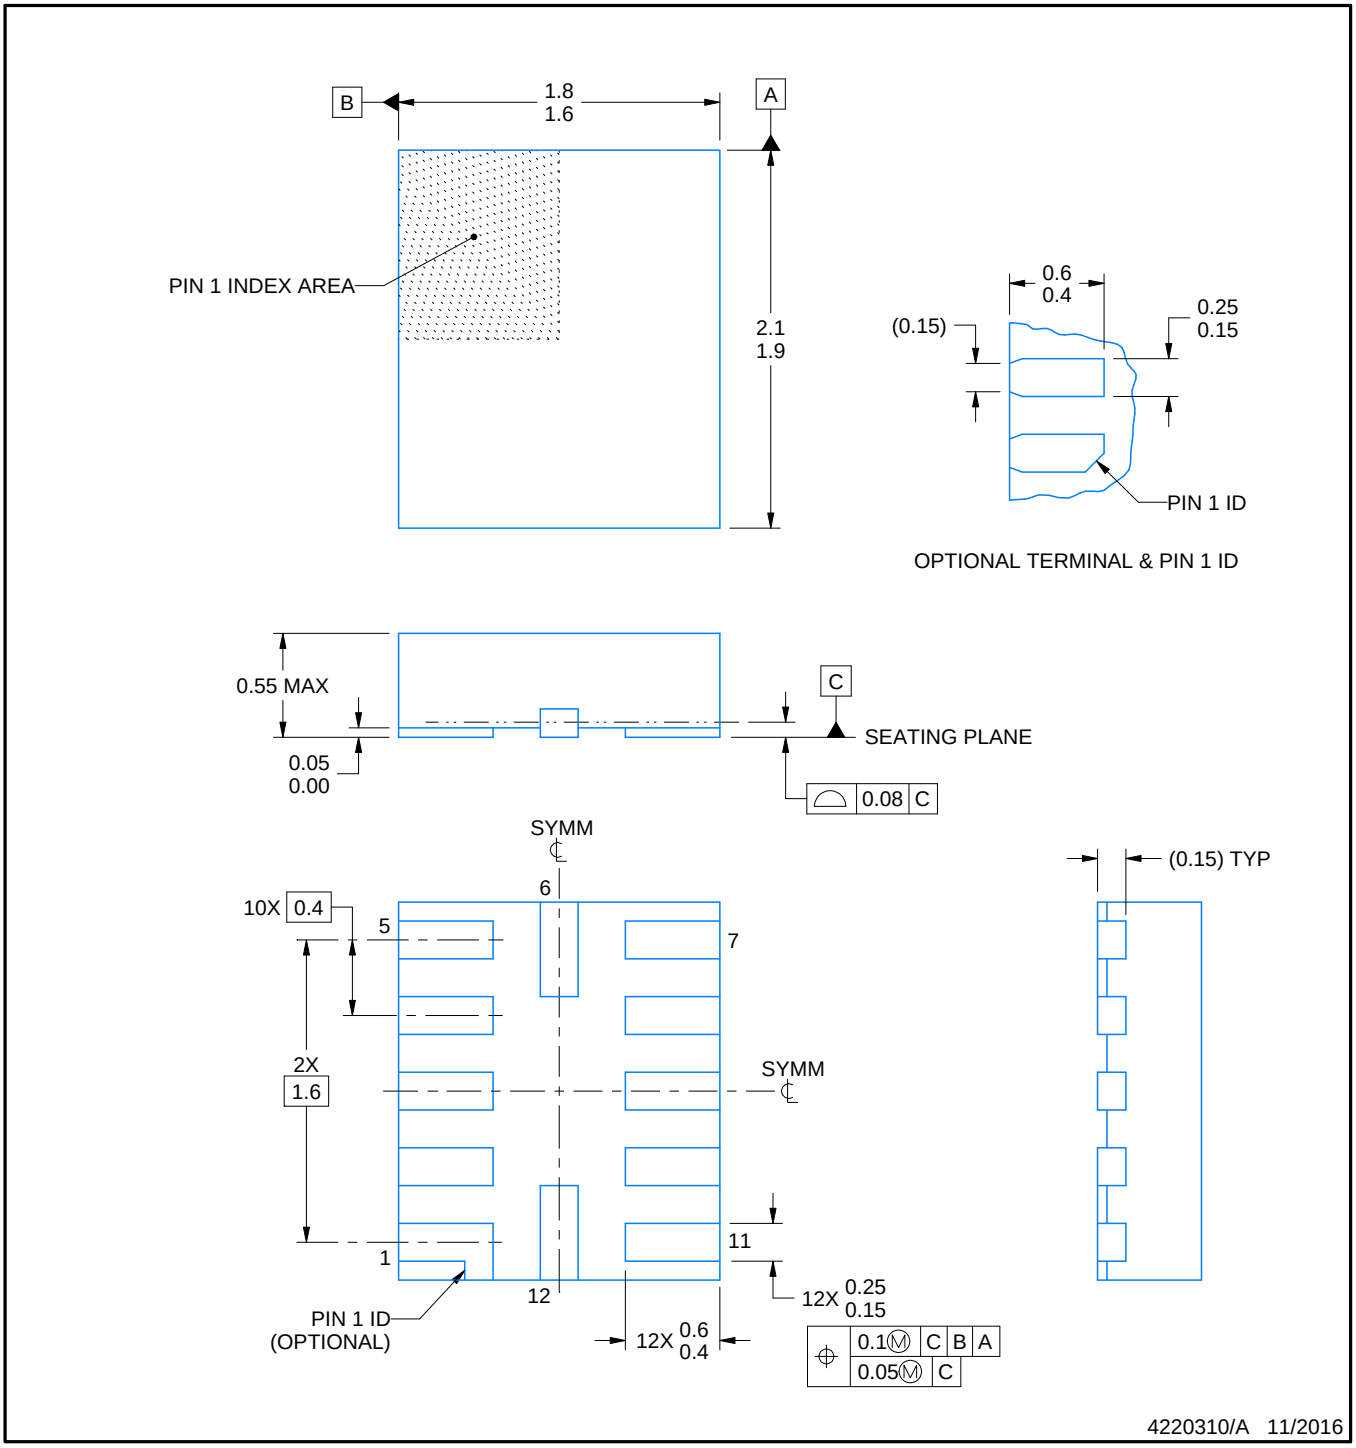
8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

RUT0012A

PACKAGE OUTLINE

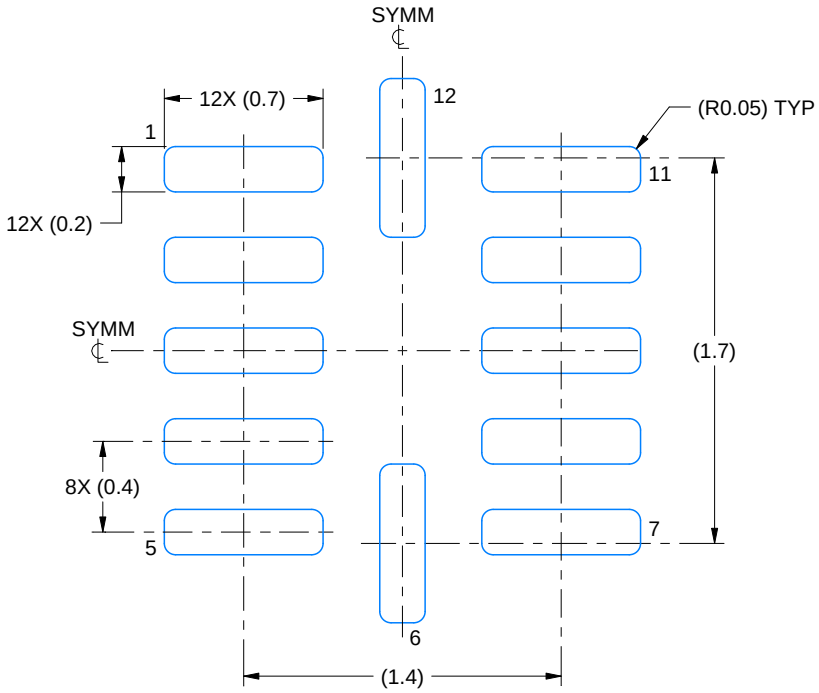
UQFN - 0.55 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

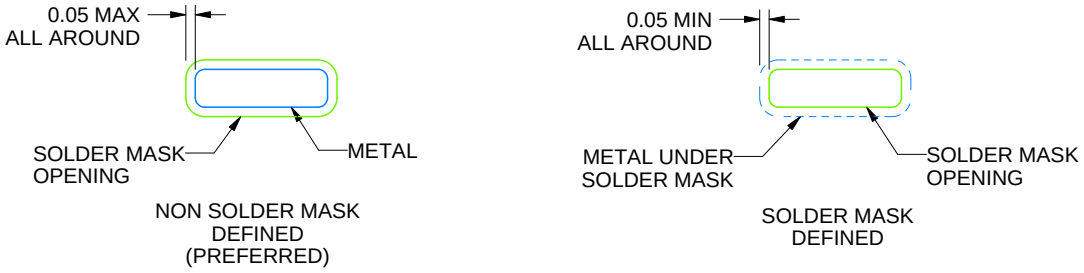


NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.



LAND PATTERN EXAMPLE
SCALE:30X

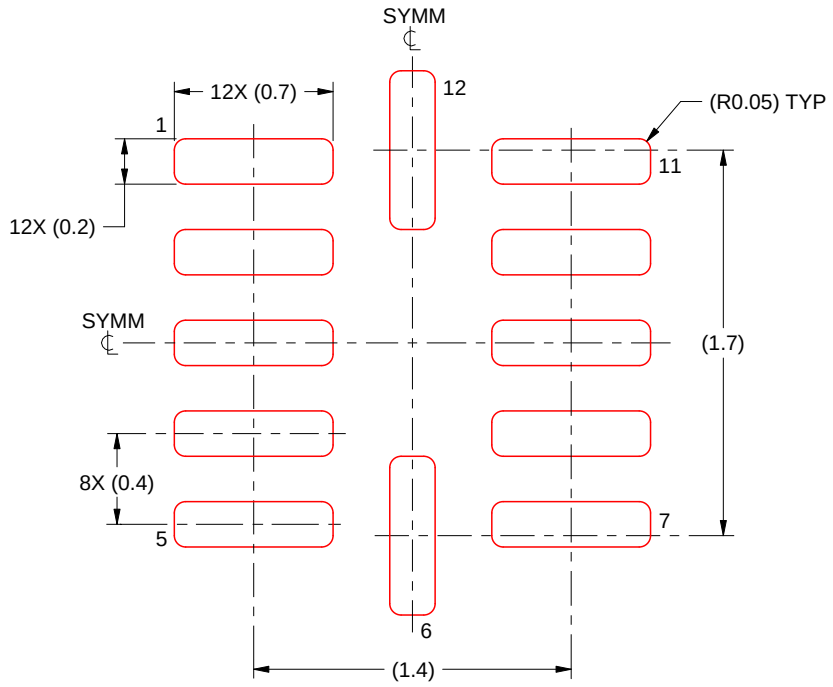


SOLDER MASK DETAILS

4220310/A 11/2016

NOTES: (continued)

3. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).



SOLDER PASTE EXAMPLE
BASED ON 0.1 mm THICK STENCIL
SCALE: 30X

4220310/A 11/2016

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

重要声明和免责声明

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做出任何明示或暗示的担保，包括但不限于对适销性、某特定用途方面的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他功能安全、信息安全、监管或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的应用。严禁对这些资源进行其他复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。您应全额赔偿因在这些资源的使用中对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，TI 对此概不负责。
