SLLSFB2 – APRIL 2020

# TUSB1146 USB Type-C™ DisplayPort™ Alt Mode 10-Gbps Linear Redriver Crosspoint Switch

## 1 Features

- USB Type-C crosspoint switch supporting
  - USB 3.2 SSP + 2 DisplayPort Lanes
  - 4 DisplayPort Lanes
- USB 3.2 x1 Gen 1/Gen 2 up to 10 Gbps
- VESA®DisplayPort 2.0 up to 10 Gbps (UHBR10)
- Supports D_DFP pin assignments C, D, and E
- Choice between adaptive or fixed equalization for USB DFP receivers.
- Linear and limited redriver supported on UFP transmitter
- Limited redriver option offers both TX voltage swing and TX equalization control
  - 4 Levels of TX voltage swing from 800 mVpp up to 1100 mVpp
  - TX pre-shoot and de-emphasis
- Ultra-low-power architecture
- Up to 12 dB equalization at 5 GHz
- Transparent to DisplayPort link training
- Configuration through GPIO or I$^2$C
- Intel proprietary DCI capability on USB Type-C for closed chassis debugging
- Hot-Plug capable
- Industrial temperature range: –40 ºC to 85 ºC (TUSB1146I)
- Commercial temperature range: 0 ºC to 70 ºC (TUSB1146)
- 4 mm x 6 mm, 0.4 mm Pitch WQFN package

## 2 Applications

- Notebooks and desktops
- Tablets
- Docking Stations

## 3 Description

The TUSB1146 is a VESA USB Type-C™ Alt Mode redriving switch supporting USB 3.2 data rates up to 10 Gbps and DisplayPort 2.0 up to 10 Gbps for downstream facing port (Host). The device is used for configurations C, D, and E from the VESA DisplayPort Alt Mode on USB Type-C standard. This protocol-agnostic linear redriver is also capable of supporting other USB Type-C Alt Mode interfaces such as HDMI Alt Mode.
The TUSB1146 incorporates an innovative, adaptive receiver equalization (AEQ) feature. The AEQ feature will automatically find the best ISI compensation setting between the USB device and the TUSB1146. Because the AEQ finds the best setting, interoperability between a USB Host and USB Device is vastly improved. The TUSB1146 operates on a single 3.3-V supply and comes in a commercial temperature range and industrial temperature range.

### Device Information[1]

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|---|---|---|
| TUSB1146 | WQFN (40) | 4.00 mm x 6.00 mm |
| TUSB1146I | | |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## TUSB1146 Pin Functions

| PIN | | I/O | DESCRIPTION |
|---|---|---|---|
| NAME | NO. | | |
| DP0p | 9 | Diff I | DP Differential positive input for DisplayPort Lane 0. |
| DP0n | 10 | Diff I | DP Differential negative input for DisplayPort Lane 0. |
| DP1p | 12 | Diff I | DP Differential positive input for DisplayPort Lane 1. |
| DP1n | 13 | Diff I | DP Differential negative input for DisplayPort Lane 1. |
| DP2p | 15 | Diff I | DP Differential positive input for DisplayPort Lane 2. |
| DP2n | 16 | Diff I | DP Differential negative input for DisplayPort Lane 2. |
| DP3p | 18 | Diff I | DP Differential positive input for DisplayPort Lane 3. |
| DP3n | 19 | Diff I | DP Differential negative input for DisplayPort Lane 3. |
| RX1n | 31 | Diff I/O | Differential negative output for DisplayPort or differential negative input for USB3.1 Downstream Facing port. |
| RX1p | 30 | Diff I/O | Differential positive output for DisplayPort or differential positive input for USB3.1 Downstream Facing port. |
| TX1n | 34 | Diff O | Differential negative output for DisplayPort or USB3.1 downstream facing port. |
| TX1p | 33 | Diff O | Differential positive output for DisplayPort or USB 3.1 downstream facing port. |
| TX2p | 37 | Diff O | Differential positive output for DisplayPort or USB 3.1 downstream facing port. |
| TX2n | 36 | Diff O | Differential negative output for DisplayPort or USB 3.1 downstream facing port. |

## TUSB1146 Pin Functions (continued)

| PIN | | I/O | DESCRIPTION |
|---|---|---|---|
| NAME | NO. | | |
| RX2p | 40 | Diff I/O | Differential positive output for DisplayPort or differential positive input for USB3.1 Downstream Facing port. |
| RX2n | 39 | Diff I/O | Differential negative output for DisplayPort or differential negative input for USB3.1 Downstream Facing port. |
| SSTXp | 8 | Diff I | Differential positive input for USB3.1 upstream facing port. |
| SSTXn | 7 | Diff I | Differential negative input for USB3.1 upstream facing port. |
| SSRXp | 5 | Diff O | Differential positive output for USB3.1 upstream facing port. |
| SSRXn | 4 | Diff O | Differential negative output for USB3.1 upstream facing port. |
| EQ1 | 35 | 4 Level I | This pin along with EQ0 sets the USB receiver equalizer gain for downstream facing RX1 and RX2 when USB used. Refer to Table 7 for details on the equalization setting. |
| EQ0 | 38 | 4 Level I | This pin along with EQ1 sets the USB receiver equalizer gain for downstream facing RX1 and RX2 when USB used. Refer to Table 7 for details on the equalization setting. |
| CAD_SNK/DCI_DAT[(1)] | 29 | I/O (PD) | When I2C_EN ! = 0, this pin functions as DCI data output Leave open if not used. When I2C_EN = 0 , this pin is CAD_SNK (L = AUX snoop enabled and H = AUX snoop disabled with all lanes active). |
| HPDIN/DCI_CLK[(1)] | 32 | I/O (PD) | When I2C_EN ! = 0, this pin functions as DCI clock output Leave open if not used. When I2C_EN = 0, this pin is an input for Hot Plug Detect received from DisplayPort sink. When HPDIN is Low for greater than 2ms, all DisplayPort lanes are disabled while the AUX to SBU switch will remain closed. |
| I2C_EN | 17 | 4 Level I | I$^2$C Programming Mode or GPIO Programming Select.<br>0 = GPIO mode (I$^2$C disabled) with adaptive EQ disabled.<br>R = TI Test Mode (I$^2$C enabled at 3.3 V)<br>F = I$^2$C enabled at 1.8 V when EQ0 = "0" and EQ1 = "0". All other combinations of EQ0 and EQ1 are reserved.<br>1 = I$^2$C enabled at 3.3 V. |
| SBU1 | 27 | I/O, CMOS | SBU1. This pin should be DC coupled to the SBU1 pin on the Type-C receptacle. A 2-M ohm resistor to GND is also recommended. |
| SBU2 | 26 | I/O, CMOS | SBU2. This pin should be DC coupled to the SBU2 pin on the Type-C receptacle. A 2-M ohm resistor to GND is also recommended. |
| AUXp | 24 | I/O, CMOS | AUXp. DisplayPort AUX positive I/O connected to the DisplayPort source through a AC coupling capacitor. In addition to AC coupling capacitor, this pin also requires a 100K resistor to GND. This pin along with AUXN is used by the TUSB1146 for AUX snooping and is routed to SBU1/2 based on the orientation of the Type-C. |
| AUXn | 25 | I/O, CMOS | AUXn. DisplayPort AUX negative I/O connected to the DisplayPort source through a AC coupling capacitor. In addition to AC coupling capacitor, this pin also requires a 100K resistor to VCC (3.3V). This pin along with AUXP is used by the TUSB1146 for AUX snooping and is routed to SBU1/2 based on the orientation of the Type-C. |
| DPEQ1 | 2 | 4 Level I | DisplayPort Receiver EQ. Along with DPEQ0, this pin selects the DisplayPort receiver equalization gain. Refer to Table 9 for details on the equalization settings. |
| DPEQ0/A1 | 14 | 4 Level I | DisplayPort Receiver EQ. Along with DPEQ1, this pin selects the DisplayPort receiver equalization gain. When I2C_EN is not '0', this pin will also set the TUSB1146 I$^2$C address. Refer to Table 9 for details on the equalization settings. |
| SSEQ1 | 3 | 4 Level I | Along with SSEQ0, sets the USB receiver equalizer gain for upstream facing SSTXP/N. Refer to Table 8 for details on the equalization settings. |
| SSEQ0/A0 | 11 | 4 Level I | Along with SSEQ1, sets the USB receiver equalizer gain for upstream facing SSTXP/N. When I2C_EN is not '0', this pin will also set the TUSB1146 I$^2$C address. Refer to Table 8 for details on the equalization settings. |
| FLIP/SCL | 21 | 2 Level I | When I2C_EN='0' this is Flip control pin, otherwise this pin is I$^2$C clock. . When used for I$^2$C clock pull-up to I$^2$C master's VCC I2C supply. |
| CTL0/SDA | 22 | 2 Level I | When I2C_EN='0' this is a USB3.1 Switch control pin, otherwise this pin is I$^2$C data. When used for I$^2$C data pullup to I$^2$C master's VCC I2C supply. |
| CTL1/HPDIN | 23 | 2 Level I (Failsafe) (PD) | DP Alt mode Switch Control Pin. When I2C_EN = '0', this pin will enable or disable DisplayPort functionality. Otherwise, when I2C_EN is not "0", DisplayPort functionality is enabled and disabled through I$^2$C registers.<br>L = DisplayPort Disabled.<br>H = DisplayPort Enabled.<br>When I2C_EN is not "0" this pin is an input for Hot Plug Detect received from DisplayPort sink. When this HPDIN is Low for greater than 2 ms, all DisplayPort lanes are disabled and AUX to SBU switch will remain closed. |
| VCC | 1, 6, 20, 28 | P | 3.3-V Power Supply |
| Thermal Pad | | G | Ground |

(1) Not a fail-safe I/O. Actively driving pin high while VCC is removed results in leakage voltage on VCC pins.

# 6 Specifications

## 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1]

| | | MIN | MAX | UNIT |
|---|---|---|---|---|
| Supply Voltage Range | $V_{CC}$ | −0.3 | 4 | V |
| Voltage Range at any input or output pin | Differential voltage between positive and negative inputs | -2.5 | 2.5 | V |
| | Voltage at differential inputs | −0.5 | 4 | V |
| | CMOS Inputs | −0.5 | 4 | V |
| Maximum junction temperature, $T_J$ | TUSB1146 | | 105 | °C |
| | TUSB1146I | | 125 | °C |
| Storage temperature, $T_{stg}$ | | −65 | 150 | °C |

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. Theseare stress ratings only, which do not imply functional operation of the device at these or anyother conditions beyond those indicated under *Recommended OperatingConditions.* Exposure to absolute-maximum-rated conditions for extended periods mayaffect device reliability.

## 6.2 ESD Ratings

| | | | VALUE | UNIT |
|---|---|---|---|---|
| $V_{(ESD)}$ | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[1] | ±2000 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101[2] | ±1500 | |

(1) JEDEC document JEP155 states that 500-V HBM allows safemanufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safemanufacturing with a standard ESD control process.

## 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | NOM | MAX | UNIT |
|---|---|---|---|---|---|
| $V_{CC}$ | Main power supply | 3.0 | 3.3 | 3.6 | V |
| | Main supply ramp requirement | 0.1 | | 50 | ms |
| $V_{(I2C)}$ | Supply that external resistors are pulled up to on SDA and SCL | 1.7 | | 3.6 | V |
| $V_{(PSN)}$ | Supply Noise on $V_{CC}$ pins (less than 4MHz) | | | 100 | mV |
| $T_A$ | TUSB1146 Operating free-air temperature | 0 | | 70 | °C |
| | TUSB1146I Operating free-air temperature | -40 | | 85 | °C |

## 6.4 Thermal Information

| | THERMAL METRIC[1] | TUSB1146 RNQ (WQFN) 40 PINS | UNIT |
|---|---|---|---|
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 37.6 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 20.7 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 9.5 | °C/W |
| $\psi_{JT}$ | Junction-to-top characterization parameter | 0.2 | °C/W |
| $\psi_{JB}$ | Junction-to-board characterization parameter | 9.4 | °C/W |
| $R_{\theta JC(bot)}$ | Junction-to-case (bottom) thermal resistance | 2.3 | °C/W |

(1) For more information about traditional and new thermalmetrics, see the *Semiconductor and ICPackage Thermal Metrics* application report.

## 6.5 Power Supply Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| $P_{CC(ACTIVE-USB)}$ | Average active power USB Only | Link in U0 with GEN2 data transmission; EQ control pins = NC; PRBS7 pattern at 10 Gbps, $V_{ID}$ = 1000 m$V_{PP}$ ; LINR_L3; CTL1 = L; CTL0 = H | | 270 | | mW |

## Power Supply Characteristics (continued)

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| $P_{CC(ACTIVE-USB-DP1)}$ | Average active power USB + 2 Lane DP | Link in U0 with GEN2 data transmission; EQ control pins = NC; PRBS7 pattern at 10 Gbps, $V_{ID}$ = 1000 m$V_{PP}$; LINR_L3; CTL1 = H; CTL0 = H | | 520 | | mW |
| $P_{CC(ACTIVE--4DP)}$ | Average active power 4 Lane DP Only | Four active DP lanes operating at 8.1Gbps; PRBS7 pattern; CTL1 = H; CTL0 = L; LINR_L3; | | 500 | | mW |
| $P_{CC(NC-USB)}$ | Average power with no connection | No GEN2 device is connected to TXP/TXN; CTL1 = L; CTL0 = H; | | 3.5 | | mW |
| $P_{CC(U2U3)}$ | Average power in U2/U3 | Link in U2 or U3; USB Mode Only; CTL1 = L; CTL0 = H; | | 2.0 | | mW |
| $P_{CC(HPDLOW--4DP)}$ | Power 4 Lane DP Only when HPDIN = L | CTL1 = H; CTL0 = L; HPDIN = L; | | 0.475 | | mW |
| $P_{CC(DISABLED-I2C)}$ | Device Diabled power in I2C Mode | I2C_EN != 0; HPDIN = L; | | 0.122 | | mW |
| $P_{CC(DISABLED)}$ | Device Diabled power | CTL1 = L; CTL0 = L; I2C_EN = 0; HPDIN = L; | | 0.110 | | mW |

## 6.6 Control I/O DC Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| **4-level Inputs** | | | | | | |
| 4-Level $V_{TH}$ | Threshold 0 / R | $V_{CC}$ = 3.3 V | | 0.55 | | V |
| 4-Level $V_{TH}$ | Threshold R/ Float | $V_{CC}$ = 3.3 V | | 1.65 | | V |
| 4-Level $V_{TH}$ | Threshold Float / 1 | $V_{CC33}$ = 3.3 V | | 2.7 | | V |
| $I_{IH}$ | High level input current | $V_{CC}$ = 3.6 V; $V_{IN}$ = 3.6 V | 20 | | 60 | µA |
| $I_{IL}$ | Low level input current | $V_{CC}$ = 3.6 V; $V_{IN}$ = 0 V | −100 | | -40 | µA |
| $R_{PU}$ | Internal pull-up resistance | | | 48 | | kΩ |
| $R_{PD}$ | Internal pull-down resistance | | | 98 | | kΩ |
| **2-State CMOS Input (CTL0, CTL1, FLIP). CTL0 and FLIP are Failsafe.** | | | | | | |
| $V_{IH}$ | High-level input voltage | $V_{CC}$ = 3.0V | 2 | | 3.6 | V |
| $V_{IL}$ | Low-level input voltage | $V_{CC}$ = 3.6V | 0 | | 0.8 | V |
| $R_{PD}$ | Internal pull-down resistance for HPDIN, CADSNK | | 400 | 500 | 600 | kΩ |
| $R_{PD}$ | Internal pull-down resistance for CTL1 | | 300 | 400 | 500 | kΩ |
| $I_{IH\_CTL1}$ | High-level input current for CTL1 | $V_{IN}$ = 3.6 V | −11 | | 11 | µA |
| $I_{IL\_CTL1}$ | Low-level input current for CTL1 | $V_{IN}$ = GND, $V_{CC}$ = 3.6 V | −1 | | 1 | µA |
| $I_{IH\_HPD\_CAD}$ | High-level input current for HPDIN, CADSNK | $V_{IN}$ = 3.6 V | −11 | | 11 | µA |
| $I_{IL\_HPD\_CAD}$ | Low-level input current for HPDIN, CADSNK | $V_{IN}$ = GND, $V_{CC}$ = 3.6 V | −1 | | 1 | µA |
| $I_{IH\_CTL0\_FLIP}$ | High-level input current for CTL0 and FLIP | $V_{IN}$ = 3.6 V; I2C_EN = 0 | −1 | | 1 | µA |
| $I_{IL\_CTL0\_FLIP}$ | Low-level input current for CTL0 and FLIP | $V_{IN}$ = GND, $V_{CC}$ = 3.6 V; I2C_EN = 0; | −1 | | 1 | µA |
| **I²C Control Pins (SCL, SDA)** | | | | | | |
| $V_{IH\_3p3V}$ | High-level input voltage when configured for 3.3V I2C level | I2C_EN = 1 | 2.0 | | 3.6 | V |
| $V_{IL\_3p3V}$ | Low-level input voltage when configured for 3.3V I2C level | I2C_EN = 1 | 0 | | 0.8 | V |
| $V_{IH\_1p8V}$ | High-level input voltage when configured for 1.8V I2C level | I2C_EN = F | 1.2 | | | V |
| $V_{IL\_1p8V}$ | Low-level input voltage when configured for 1.8V I2C level | I2C_EN = F | 0 | | 0.6 | V |
| $V_{OL}$ | Low-level output voltage | I2C_EN = 0; $I_{OL}$ = 6 mA | 0 | | 0.4 | V |

## Control I/O DC Electrical Characteristics (continued)

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| $I_{OL}$ | Low-level output current | I2C_EN = 0; $V_{OL}$ = 0.4 V | 20 | | | mA |
| $I_{I(I2C)}$ | Input current | 0.1 x $V_{(I2C)}$ < Input voltage < 3.3 V | −1 | | 1 | µA |
| $C_{I(I2C)}$ | Input capacitance | | | | 10 | pF |
| $C_{(I2C\_FM+\_BUS)}$ | I2C bus capacitance for FM+ (1MHz) | | | | 150 | pF |
| $C_{(I2C\_FM\_BUS)}$ | I2C bus capacitance for FM (400kHz) | | | | 150 | pF |
| $R_{(EXT\_I2C\_FM+)}$ | External resistors on both SDA and SCL when operating at FM+ (1MHz) | $C_{(I2C\_FM+\_BUS)}$ = 150 pF | 620 | 820 | 910 | Ω |
| $R_{(EXT\_I2C\_FM)}$ | External resistors on both SDA and SCL when operating at FM (400kHz) | $C_{(I2C\_FM\_BUS)}$ = 150 pF | 620 | 1500 | 2200 | Ω |

## 6.7 USB and DP Electrical Characteristics

over operating free-air temperature and voltage range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| **USB Gen 2 Differential Receiver (RX1p/n, RX2p/n, SSTXp/n)** | | | | | | |
| $V_{(RX-DIFF-PP)}$ | Input differential peak-peak voltage swing linear dynamic range | AC-coupled differential peak-to-peak signal measured post CTLE through a reference channel | | 1200 | | mVpp |
| $V_{(RX-DC-CM)}$ | Common-mode voltage bias in the receiver (DC) | | | 0 | | V |
| $V_{RX\_CM-INST}$ | Max Instantaneous RX DC common mode voltage change under all operating conditions (OFF to ON, Disabled to USB, etc…) | Measured at non-TUSB1146 side of AC coupling capacitor with 200-kΩ load. | -200 | | 500 | mV |
| $R_{(RX-DIFF-DC)}$ | Differential input impedance (DC) | Present after a GEN2 device is detected on TXP/TXN | 72 | 90 | 120 | Ω |
| $R_{(RX-CM-DC)}$ | Receiver DC common mode impedance | Present after a GEN2 device is detected on TXP/TXN | 18 | | 30 | Ω |
| $Z_{(RX-HIGH-IMP-DC-POS)}$ | Common-mode input impedance with termination disabled (DC) | Present when no GEN2 device is detected on TXP/TXN. Measured over the range of 0-500mV with respect to GND. | 25 | | | kΩ |
| $V_{(SIGNAL-DET-DIFF-PP)}$ | Input differential peak-to-peak signal detect assert level | At 10 Gbps, no input loss, PRBS7 pattern | | 80 | | mV |
| $V_{(RX-IDLE-DET-DIFF-PP)}$ | Input differential peak-to-peak signal detect de-assert Level | At 10 Gbps, no input loss, PRBS7 pattern | | 60 | | mV |
| $V_{(RX-LFPS-DET-DIFF-PP)}$ | Low frequency periodic signaling (LFPS) detect threshold | Below the minimum is squelched | 100 | | 300 | mV |
| $V_{(RX-CM-AC-P)}$ | Peak RX AC common-mode voltage | Measured at package pin | | | 150 | mV |
| $C_{(RX)}$ | RX input capacitance to GND | At 5 GHz; | | 0.88 | 1 | pF |
| $R_{L(RX-DIFF)}$ | Differential return Loss | 50 MHz – 1.25 GHz at 90 Ω; | | −19 | | dB |
| | | 5 GHz at 90 Ω; | | −10 | | dB |
| $R_{L(RX-CM)}$ | Common-mode return loss | 50 MHz – 5 GHz at 90 Ω; | | −10 | | dB |
| $E_{Q\_SSTX15}$ | SSTX Receiver equalization at 5 GHz | FLIPSEL = 0; SSEQ_SEL = 15; | | 11.5 | | dB |
| $E_{Q\_RX15}$ | RX1 Receiver equalization at 5 GHz | FLIPSEL = 0; EQ1_SEL = 15; | | 11.0 | | dB |
| $C_{AC-USB1}$ | Required external AC capacitor on SSTX | | 75 | | 265 | nF |
| $C_{AC-USB2}$ | Optional external AC capacitor on RX1 and RX2. | | 297 | | 363 | nF |
| **USB Gen 2 Differential Transmitter (TX1p/n, TX2p/n, SSRXp/n)** | | | | | | |
| $V_{TX(DIFF-PP)}$ | Transmitter dynamic differential voltage swing range. | | | 1200 | | mVpp |
| $V_{TX(RCV-DETECT)}$ | Amount of voltage change allowed during receiver detection | | | | 600 | mV |
| $V_{TX-CM-INST-ONOFF}$ | Max Instantaneous TX DC common mode voltage change under operating condition: OFF to ON, ON to OFF, during Rx.Detect; Disconnect to U0, U2/U3 to U0. | Measured single-ended at non-TUSB1146 side of AC coupling capacitor with 200-kΩ load. | -500 | | 800 | mV |
| $V_{TX(CM-IDLE-DELTA)}$ | Transmitter idle common-mode voltage change while in U2/U3 and not actively transmitting LFPS | | −300 | | 600 | mV |
| $V_{TX(DC-CM)}$ | Common-mode voltage bias in the transmitter (DC) | | 0 | | 1 | V |
| $V_{TX(CM-AC-PP-ACTIVE)}$ | Tx AC common-mode voltage active | Max mismatch from Txp + Txn for both time and amplitude | | | 100 | mVpp |
| $V_{TX(IDLE-DIFF-AC-PP)}$ | AC electrical idle differential peak-to-peak output voltage | At package pins | 0 | | 10 | mV |
| $V_{TX(CM-DC-ACTIVE-IDLE-DELTA)}$ | Absolute DC common-mode voltage between U1 and U0 | At package pin | | | 200 | mV |
| $R_{TX(DIFF)}$ | Differential impedance of the driver | | 80 | 90 | 120 | Ω |
| $R_{TX(CM)}$ | Common-mode impedance of the driver | Measured with respect to AC ground over 0–500 mV | 18 | | 30 | Ω |

## USB and DP Electrical Characteristics (continued)

over operating free-air temperature and voltage range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| $V_{SSRX-LIMITED-VODL0}$ | SSRX differential peak-to-peak voltage when configured for limited redriver and LINR_L0 | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 0; | | 800 | | mVpp |
| $V_{SSRX-LIMITED-VODL1}$ | SSRX differential peak-to-peak voltage when configured for limited redriver and LINR_L1 | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 0; | | 900 | | mVpp |
| $V_{SSRX-LIMITED-VODL2}$ | SSRX differential peak-to-peak voltage when configured for limited redriver and LINR_L2 | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 0; | | 1000 | | mVpp |
| $V_{SSRX-LIMITED-VODL3}$ | SSRX differential peak-to-peak voltage when configured for limited redriver and LINR_L3 | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 0; | | 1100 | | mVpp |
| $V_{SSRX-DE-RATIO0}$ | SSRX de-emphasis when configured for limited redriver and de-emphasis enabled. | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 1; TX_DEEPHASIS = 2'b00; USB_SSRX_VOD = 2'b00 (LINR_L3); Refer to Figure 25 | | -1.5 | | dB |
| $V_{SSRX-DE-RATIO1}$ | SSRX de-emphasis when configured for limited redriver and de-emphasis enabled. | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 1; TX_DEEPHASIS = 2'b01; USB_SSRX_VOD = 2'b00 (LINR_L3); Refer to Figure 25 | | -2.1 | | dB |
| $V_{SSRX-DE-RATIO2}$ | SSRX de-emphasis when configured for limited redriver and de-emphasis enabled. | TX_PRESHOOT_EN = 0; TX_DEEMPHASIS_EN = 1; TX_DEEPHASIS = 2'b10; USB_SSRX_VOD = 2'b00 (LINR_L3); Refer to Figure 25 | | -3.2 | | dB |

| $t_{VALID}$ | Rising edge of DCI clock to DCI data valid | | | | 1 | ns |
| $t_{DCI\_RISE}$ | DCI output rise time | Measured at 20% to 80%. | 350 | | | ps |
| $t_{DCI\_FALL}$ | DCI output fall time | Measured at 80% to 20% | 350 | | | ps |

## 6.9  Timing Requirements

| | | | MIN | NOM | MAX | UNIT |
|---|---|---|---|---|---|---|
| **USB3.1** | | | | | | |
| $t_{IDLEEntry}$ | Delay from U0 to electrical idle | Refer to Figure 20. | | 10 | | ns |
| $t_{IDELExit\_U1}$ | U1 exist time: break in electrical idle to the transmission of LFPS | Refer to Figure 20. | | 6 | | ns |
| $t_{IDLEExit\_U2U3}$ | U2/U3 exit time: break in electrical idle to transmission of LFPS | Refer to Figure 20. | | 10 | | µs |
| $t_{RXDET\_INTVL}$ | RX detect interval while in Disconnect | | | | 12 | ms |
| $t_{IDLEExit\_DISC}$ | Disconnect Exit Time | | | 10 | | µs |
| $t_{Exit\_SHTDN}$ | Shutdown Exit Time | | | 1 | | ms |
| $t_{AEQ\_FULL\_DONE}$ | Maximum time to obtain optimum EQ setting when operating in Full AEQ mode. | | | | 300 | µs |
| $t_{AEQ\_FAST\_DONE}$ | Maximum time to determine appropriate EQ setting when operating in Fast AEQ mode. | | | | 60 | µs |
| $t_{DIFF\_DLY}$ | Differential Propagation Delay | Refer to Figure 19. | | | 300 | ps |
| $t_R$, $t_F$ | Output Rise/Fall time | 20%-80% of differential voltage measured 1.7 inch from the output pin; Refer to Figure 21. | | 40 | | ps |
| $t_{RF\_MM}$ | Output Rise/Fall time mismatch | 20%-80% of differential voltage measured 1.7 inch from the output pin | | | 2.6 | ps |
| **Power-up** | | | | | | |
| $t_{D\_PG}$ | $V_{CC(min)}$ to internal Power Good asserted high | Refer to Figure 27. | | | 25 | ms |
| $t_{CFG\_SU}$ | CFG[1] pins setup[2] | Refer to Figure 27. | 250 | | | µs |
| $t_{CFG\_HD}$ | CFG[1] pins hold | Refer to Figure 27. | 10 | | | µs |
| $t_{CTL\_DB}$ | CTL[1:0] and FLIP pin debounce | Refer to Figure 27. | | | 16 | ms |

(1)  Following pins comprise CFG pins:  I2C_EN, EQ[1:0], SSEQ[1:0], and DPEQ[1:0].
(2)  Recommend CFG pins are stable when $V_{CC}$ is at min.

## 6.10  Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| **AUXp or AUXn and SBU1 or SBU2** | | | | | | |
| $t_{AUX\_PD}$ | Switch propagation delay | | | | 400 | ps |
| $t_{AUX\_SW\_OFF}$ | Switching time CTL1 to switch OFF. Not including TCTL1_DEBOUNCE. | Refer to Figure 23. | | | 500 | ns |
| $t_{AUX\_SW\_ON}$ | Switching time CTL1 to switch ON | Refer to Figure 22. | | | 500 | ns |
| $t_{AUX\_INTRA}$ | Intra-pair output skew | | | | 100 | ps |
| **USB3.1 and DisplayPort Mode Transition Requirement GPIO Mode** | | | | | | |
| $t_{GP\_USB\_4DP}$ | Min overlap of CTL0 and CTL1 when transitioning from USB 3.1 only mode to 4-Lane DisplayPort mode or vice versa. | I2C_EN = 0; Refer to Figure 18. | 4 | | | µs |

## Switching Characteristics (continued)

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---|---|---|---|---|---|---|
| **CTL1 and HPDIN** | | | | | | |
| $t_{CTL1\_DEBOUNCE}$ | CTL1 and HPDIN debounce time when transitioning from H to L. | | 2 | | 10 | ms |
| **I²C** | | | | | | |
| $f_{SCL}$ | I²C clock frequency | | | | 1 | MHz |
| $t_{BUF}$ | Bus free time between START and STOP conditions | Refer to Figure 17 | 0.5 | | | µs |
| $t_{HDSTA}$ | Hold time after repeated START condition. After this period, the first clock pulse is generated | Refer to Figure 17 | 0.26 | | | µs |
| $t_{LOW}$ | Low period of the I²C clock | Refer to Figure 17 | 0.5 | | | µs |
| $t_{HIGH}$ | High period of the I²C clock | Refer to Figure 17 | 0.26 | | | µs |
| $t_{SUSTA}$ | Setup time for a repeated START condition | Refer to Figure 17 | 0.26 | | | µs |
| $t_{HDDAT}$ | Data hold time | Refer to Figure 17 | 0 | | | µs |
| $t_{SUDAT}$ | Data setup time | Refer to Figure 17 | 50 | | | ns |
| $t_R$ | Rise time of both SDA and SCL signals | Refer to Figure 17 | | | 120 | ns |
| $t_F$ | Fall time of both SDA and SCL signals | Refer to Figure 17 | $20 \times (V_{(I2C)}/5.5\ V)$ | | 120 | ns |
| $t_{SUSTO}$ | Setup time for STOP condition | Refer to Figure 17 | 0.26 | | | µs |
| $C_b$ | Capacitive load for each bus line | | | | 150 | pF |

# 8 Detailed Description

## 8.1 Overview

The TUSB1146 is a VESA USB Type-C Alt Mode redriving switch supporting data rates up to 10 Gbps for downstream facing port. The device utilize 5$^{th}$ generation USB redriver technology as well as new innovative adaptive equalization feature on its DFP receivers. The device is utilized for DFP configurations C, D, and E from the VESA DisplayPort Alt Mode on USB Type-C.

The TUSB1146 provides several levels of receive equalization to compensate for cable and board trace loss due to inter-symbol interference (ISI) when USB 3.1 Gen1/Gen2 or DisplayPort 2.0 signals travel across a PCB or cable. This device requires a 3.3-V power supply. It comes in a commercial temperature range and industrial temperature range.

For a host application the TUSB1146 enables the system to pass both transmitter compliance and receiver jitter tolerance tests for USB 3.1 Gen1/Gen2 and DisplayPort version 2.0 (up to UHBR10). The re-driver recovers incoming data by applying equalization that compensates for channel loss, and drives out signals with a high differential voltage. Each channel has a receiver equalizer with selectable gain settings. The equalization should be set based on the amount of insertion loss before the TUSB1146 receivers. Independent equalization control for each channel can be set using EQ[1:0], SSEQ[1:0], and DPEQ[1:0] pins.

The TUSB1146 advanced state machine makes it transparent to hosts and devices. After power up, the TUSB1146. periodically performs receiver detection on the TX pairs. If it detects a USB 3.1 Gen1/Gen2 receiver, the RX termination is enabled, and the TUSB1146 is ready to re-drive.

The device ultra-low-power architecture operates at a 3.3-V power supply and achieves enhanced performance. The automatic LFPS de-emphasis control further enables the system to be USB3.1 compliant.

## 8.3 Feature Description

### 8.3.1 USB 3.1

The TUSB1146 supports USB 3.1 Gen1/Gen2 datarates up to 10 Gbps. The TUSB1146 supports all the USB defined power states (U0, U1, U2, and U3). Because the TUSB1146 is a linear redriver, it can't decode USB3.1 physical layer traffic. The TUSB1146 monitors the actual physical layer conditions like receiver termination, electrical idle, LFPS, and SuperSpeed signaling rate to determine the USB power state of the USB 3.1 interface.

The TUSB1146 features an intelligent low frequency periodic signaling (LFPS) detector. The LFPS detector automatically senses the low frequency signals and disables receiver equalization functionality. When not receiving LFPS, the TUSB1146 will enable receiver equalization based on the EQ[1:0] and SSEQ[1:0] pins or values programmed into EQ1_SEL, EQ2_SEL, and SSEQ_SEL registers.

### 8.3.2 DisplayPort

The TUSB1146 supports up to 4 DisplayPort lanes at datarates up to 10 Gbps (UHBR10). The TUSB1146, when configured in DisplayPort mode, monitors the native AUX traffic as it traverses between DisplayPort source and DisplayPort sink. For the purposes of reducing power, the TUSB1146 manages the number of active DisplayPort lanes based on the content of the AUX transactions. The TUSB1146 snoops native AUX writes to DisplayPort sink's DPCD registers 0x00101 (LANE_COUNT_SET) and 0x00600 (SET_POWER_STATE). TUSB1146 disables/enables lanes based on value written to LANE_COUNT_SET. The TUSB1146 disables all lanes when SET_POWER_STATE is in the D3. Otherwise active lanes will be based on value of LANE_COUNT_SET.

DisplayPort AUX snooping is enabled by default but can be disabled by changing the AUX_SNOOP_DISABLE register. Once AUX snoop is disabled, management of TUSB1146 DisplayPort lanes are controlled through various configuration registers. When TUSB1146 is enabled for GPIO mode (I2C_EN = "0"), the CAD_SNK pin can be used to disable AUX snooping. When CAD_SNK pin is high, the AUX snooping functionality is disabled and all four DisplayPort lanes will be active.

### 8.3.3 4-level Inputs

The TUSB1146 has (I2C_EN, EQ[1:0], DPEQ[1:0], and SSEQ[1:0]) 4-level inputs pins that are used to control the equalization gain and place TUSB1146 into different modes of operation. These 4-level inputs utilize a resistor divider to help set the 4 valid levels and provide a wider range of control settings. There is an internal pull-up and pull-down resistors. These resistors, together with the external resistor connection combine to achieve the desired voltage level.

**Table 1. 4-Level Control Pin Settings**

| LEVEL | SETTINGS |
|---|---|
| 0 | Option 1: Tie 1 KΩ 5% to GND.<br>Option 2: Tie directly to GND. |
| R | Tie 20 KΩ 5% to GND. |
| F | Float (leave pin open) |
| 1 | Option 1: Tie 1 KΩ 5%to $V_{CC}$.<br>Option 2: Tie directly to $V_{CC}$. |

**NOTE**

All four-level inputs are latched after rising edge of the internal reset. After $t_{cfg\_hd}$, the internal pull-up and pull-down resistors will be isolated in order to save power.

### 8.3.4 Receiver Linear Equalization

The purpose of receiver equalization is to compensate for channel insertion loss and inter-symbol interference in the system before the input of the TUSB1146. The receiver overcomes these losses by attenuating the low frequency components of the signals with respect to the high frequency components. The proper gain setting should be selected to match the channel insertion loss before the input of the TUSB1146 receivers. Two 4-level inputs pins enable up to 16 possible equalization settings. USB3.1 upstream path, USB3.1 downstream path, and DisplayPort each have their own two 4-level inputs. The TUSB1146 also provides the flexibility of adjusting settings through I2C registers.

The TUSB1146 implements three different equalizer features for the USB-C downstream facing port receivers (RX1 and RX2): Fixed EQ, Fast Adaptive EQ (Fast AEQ), and Full Adaptive EQ (Full AEQ). The default operation is Fixed EQ. In Fixed EQ operation, a single setting is used for all possible devices (with and without cable) inserted into the USB-C receptacle. The Fast AEQ feature will distinguish between a short channel and a long channel. A short channel represents a low loss use case of a USB 3.1 device plugged directly into USB-C receptacle without a cable. A long channel represents the high loss use case of the USB 3.1 device plugged into the receptacle through a USB cable. In Fast AEQ mode, TUSB1146 will select between two pre-determined settings based on whether or not channel is short or long. When TUSB1146 is configured for Full AEQ, the TUSB1146 will automatically determine the best equalization setting each time a USB device is inserted into the USB-C receptacle. In Full AEQ mode, the TUSB1146 will always determine the best settings regardless if the channel is short, long or somewhere in between. The Full AEQ feature is disabled by default but can be enabled through a register.

## 8.4 Device Functional Modes

### 8.4.1 Device Configuration in GPIO Mode

The TUSB1146 is in GPIO configuration when I2C_EN = "0" or when I2C_EN = "F" and !(EQ0 = "0" and EQ1 = "0"). The TUSB1146 supports the following configurations: USB 3.1 only, 2 DisplayPort lanes + USB 3.1, or 4 DisplayPort lanes (no USB 3.1). The CTL1 pin controls whether DisplayPort is enabled. The combination of CTL1 and CTL0 selects between USB 3.1 only, 2 lanes of DisplayPort, or 4-lanes of DisplayPort as detailed in Table 2. The AUXp or AUXn to SBU1 or SBU2 mapping is controlled based on Table 3.

After power-up ($V_{CC}$ from 0 V to 3.3 V), the TUSB1146 defaults to USB3.1 mode. The USB PD controller upon detecting no device attached to Type-C port or USB3.1 operation not required by attached device must take TUSB1146 out of USB3.1 mode by transitioning the CTL0 pin from L to H and back to L.

**Table 2. GPIO Configuration Control**

| CTL1 PIN | CTL0 PIN | FLIP PIN | TUSB1146 CONFIGURATION | VESA DisplayPort ALT MODE DFP_D CONFIGURATION |
|----------|----------|----------|------------------------|-----------------------------------------------|
| L | L | L | Power Down | — |
| L | L | H | Power Down | — |
| L | H | L | One Port USB 3.1 - No Flip | — |
| L | H | H | One Port USB 3.1 – With Flip | — |
| H | L | L | 4 Lane DP - No Flip | C and E |
| H | L | H | 4 Lane DP – With Flip | C and E |
| H | H | L | One Port USB 3.1 + 2 Lane DP- No Flip | D |
| H | H | H | One Port USB 3.1 + 2 Lane DP– With Flip | D |

**Table 3. GPIO AUXp or AUXn to SBU1 or SBU2 Mapping**

| CTL1 PIN | FLIP PIN | MAPPING |
|----------|----------|---------|
| H | L | AUXp → SBU1 AUXn → SBU2 |
| H | H | AUXp → SBU2 AUXn → SBU1 |
| L > 2 ms | X | Open |

Table 4 Details the TUSB1146's mux routing. This table is valid for both I²C and GPIO configuration modes.

### 8.4.2 Device Configuration In I²C Mode

The TUSB1146 is in I²C mode when I2C_EN is not equal to "0" or when I2C_EN = "F" and EQ0 = "0" and EQ1 = "0". The same configurations defined in GPIO mode are also available in I²C mode. The TUSB1146 USB3.1 and DisplayPort configuration is controlled based on Table 5. The AUXp or AUXn to SBU1 or SBU2 mapping control is based on Table 6.

**Table 5. I²C Configuration Control**

| REGISTERS | | | TUSB1146 CONFIGURATION | VESA DisplayPort ALT MODE DFP_D CONFIGURATION |
|---|---|---|---|---|
| CTLSEL1 | CTLSEL0 | FLIPSEL | | |
| 0 | 0 | 0 | Power Down | — |
| 0 | 0 | 1 | Power Down | — |
| 0 | 1 | 0 | One Port USB 3.1 - No Flip | — |
| 0 | 1 | 1 | One Port USB 3.1 – With Flip | — |
| 1 | 0 | 0 | 4 Lane DP - No Flip | C and E |
| 1 | 0 | 1 | 4 Lane DP – With Flip | C and E |
| 1 | 1 | 0 | One Port USB 3.1 + 2 Lane DP- No Flip | D |
| 1 | 1 | 1 | One Port USB 3.1 + 2 Lane DP– With Flip | D |

**Table 6. I²C AUXp or AUXn to SBU1 or SBU2 Mapping**

| REGISTERS | | | | MAPPING |
|---|---|---|---|---|
| AUX_SBU_OVR1 | AUX_SBU_OVR0 | CTLSEL1 | FLIPSEL | |
| 0 | 0 | 1 | 0 | AUXp → SBU1 AUXn → SBU2 |

### 8.4.3 DisplayPort Mode

The TUSB1146 supports up to four DisplayPort lanes at datarates up to 10 Gbps (UHBR10). TUSB1146 can be enabled for DisplayPort through GPIO control or through I²C register control. When I2C_EN is '0', DisplayPort is controlled based on Table 2. When not in GPIO mode, enable of DisplayPort functionality is controlled through I²C registers.

### 8.4.4 Linear EQ Configuration

Each of the TUSB1146 receiver lanes has individual controls for receiver equalization. The receiver equalization gain value can be controlled either through I$^2$C registers or through GPIOs. details the gain value for each available combination when TUSB1146 is in GPIO mode. These same options are also available in I$^2$C mode by updating registers DP0EQ_SEL, DP1EQ_SEL, DP2EQ_SEL, DP3EQ_SEL, EQ1_SEL, EQ2_SEL, and SSEQ_SEL.

**Table 7. USB Downstream Facing Port Receiver (RX1 and RX2 pins) Equalization Control**

| Register(s): EQ1_SEL or EQ2_SEL Equalization Setting # | EQ1 PIN Level | EQ0 PIN Level | EQ Gain at 5 GHz minus Gain at 100MHz (dB) |

### 8.4.5   VOD modes

The TUSB1146 provides two modes for VOD (voltage output differential) control: Linearity VOD and Limited VOD. The TUSB1146 defaults linearity VOD mode but can be changed to limited VOD mode thru I2C register.

#### 8.4.5.1   Linearity VOD

Linearity VOD defines the linearity range of the TUSB1146. When TUSB1146 is in linear VOD mode, the output VOD is a linear function of the input VID. For example, if the signal at TUSB1146's input (VID) is at 600mVpp then the TUSB1146's output VOD will be around 600mVpp. The linear VOD mode is the only mode available for the downstream paths (DisplayPort and USB). The upstream path (USB only) supports both linear and limited VOD. Linearity VOD mode is the default operation of the TUSB1146. The TUSB1146 provides four different linearity VOD settings. All four settings are available in I$^2$C mode thru register control.

#### 8.4.5.2   Limited VOD

Limited VOD mode is used to set the actual VOD level and is used when TUSB1146 is configured in limited redriver mode. In this mode the VOD is no longer a linear function of the input VID. For example, if the signal at TUSB1146's input (VID) is at 600mVpp then the TUSB1146's output VOD will be around 1000mVpp (assuming LINR_L3 is selected). The limited redriver mode is only supported in the upstream direction (RX1 -> SSRX and RX2 -> SSRX). The downstream paths will always operate in linear redriver mode. Limited redriver mode can be enabled by I$^2$C register. This mode is not supported in GPIO mode. The TUSB1146 provides four different limited VOD settings. All four settings are available through register control.

### 8.4.6   Transmit Equalization

The TUSB1146 in limited redriver mode offers both SSRX transmitter pre-shoot and de-emphasis controls. The TUSB1146 offers four pre-shoot levels and four de-emphasis levels. These levels can be changed by modifying I2C registers. Pre-shoot is enabled when SSRX_LIMIT_ENABLE bit = 1 and TX_PRESHOOT_EN bit= 1. De-emphasis is enabled when SSRX_LIMIT_ENABLE bit = 1 and TX_DEEPHASIS_EN = 1.

### 8.4.7   USB3.1 Modes

The TUSB1146 monitors the physical layer conditions like receiver termination, electrical idle, LFPS, and SuperSpeed signaling rate to determine the state of the USB3.1 interface. Depending on the state of the USB 3.1 interface, the TUSB1146 can be in one of four primary modes of operation when USB 3.1 is enabled (CTL0 = H or CTLSEL0 = 1b1): Disconnect, U2/U3, U1, and U0.

The Disconnect mode is the state in which TUSB1146 has not detected far-end termination on both upstream facing port (UFP) or downstream facing port (DFP). The disconnect mode is the lowest power mode of each of the four modes. The TUSB1146 remains in this mode until far-end receiver termination has been detected on both UFP and DFP. The TUSB1146 immediately exits this mode and enter U0 once far-end termination is detected.

Once in U0 mode, the TUSB1146 will redrive all traffic received on UFP and DFP. U0 is the highest power mode of all USB3.1 modes. The TUSB1146 remains in U0 mode until electrical idle occurs on both UFP and DFP. Upon detecting electrical idle, the TUSB1146 immediately transitions to U1.

The U1 mode is the intermediate mode between U0 mode and U2/U3 mode. In U1 mode, the TUSB1146 UFP and DFP receiver termination remains enabled. The UFP and DFP transmitter DC common mode is maintained. The power consumption in U1 is similar to power consumption of U0.

Next to the disconnect mode, the U2/U3 mode is next lowest power state. While in this mode, the TUSB1146 periodically performs far-end receiver detection. Anytime the far-end receiver termination is not detected on either UFP or DFP, the TUSB1146 leaves the U2/U3 mode and transitions to the Disconnect mode. It also monitors for a valid LFPS. Upon detection of a valid LFPS, the TUSB1146 immediately transitions to the U0 mode. In U2/U3 mode, the TUSB1146 receiver terminations remain enabled but the TX DC common mode voltage is not maintained.

### 8.4.8 Downstream Facing Port Adaptive Equalization

The TUSB1146 implements an adaptive equalizer (AEQ) function for the USB-C downstream facing port receivers (RX1 and RX2). The purpose of the adaptive equalizer function is determine the best EQ value such that output jitter is minimized. The TUSB1146 provides two modes of adaptive equalization: Fast AEQ and Full AEQ. The selection between Fast and Full AEQ is determined by a register. The AEQ feature is disabled by default but can enabled through a register. The Fast adaptive equalization feature is supported in GPIO mode when I2C_EN pin = "F" and !(EQ0 pin = "0" and EQ1 = "0").

**NOTE**

The AEQ feature is NOT supported on SSTX receiver and the DP[3:0] receivers. These receivers only support fixed EQ.

Fast AEQ is not supported in the GPIO defined by I2C_EN = "0". It is recommended to configure TUSB1146 for I2C mode when using adaptive EQ features as this provides the most flexibility.

#### 8.4.8.1 Fast Adaptive Equalization in I2C Mode

The Fast AEQ mode is used to distinguish two channels (short channel and a long channel) and choose the appropriate receiver equalization setting for that channel. Because Fast AEQ only distinguishes between two choices, the AEQ time is a lot shorter than Full AEQ mode which minimizes impact to USB link training.

When Fast AEQ is enabled and channel is determined to be short, the TUSB1146 will use the value programmed into the EQx_SEL, where x = 1 or 2. If the TUSB1146 determines channel is not short, the TUSB1146 will switch to EQ value programmed into LONG_EQx register, where x = 1 or 2. During initial system evaluation, it is recommended to perform both short and long channel USB3.1 RX JTOL Gen2 testing and program EQx_SEL and LONG_EQx to the value which produced the best results for each channel configuration.

The TUSB1146 will determine short and long based on the estimate eye height. The value programmed into FASTAEQ_LIMITS register will determine the eye height limits. Software can change the defaults of this register to lower or raise the limits.

**NOTE**

EQ_OVERRIDE field must be set for values programmed into EQx_SEL and LONG_EQx to be used.

It is recommended to change the FASTAEQ_LIMITS register from the default value to 0x2 (80mV).

### 8.4.8.2  Full Adaptive Equalization

The Full AEQ mode attempts to find the best equalization value for RX1 and RX2 receivers by starting at the lowest EQ value and sweeping through all EQ combinations up to the value programmed into FULLAEQ_UPPER_EQ field. The default is to sweep through all sixteen EQ values (zero to fifteen). The number of EQ combinations can be reduced by programming FULLAEQ_UPPER_EQ register. The TUSB1146 also provides the ability to add or subtract some over/under equalization to compensate for channel in front of TUSB1146 by programming OVER_EQ_CTRL field to a non-zero value. If OVER_EQ_SIGN = 0, the TUSB1146 will add the value programmed into OVER_EQ_CTRL to the EQ value determined by the full adaptation. If OVER_EQ_SIGN = 1, the TUSB1146 will subtract the value programmed into OVER_EQ_CTRL from the EQ value determined by the full adaptation. For example, if full adaptation determines the best equalization value to be 4 and OVER_EQ_CTRL is 2 and OVER_EQ_SIGN = 0, the EQ setting used by TUSB1146 will be 6. The TUSB1146 hardware will always limit the sum of OVER_EQ_CTRL and the determined optimal EQ from full adaptation to be less than or equal to 15.

**NOTE**

Full AEQ is only supported in I2C mode.

## 8.5 Programming

### 8.5.1 Transition between Modes

The TUSB1146 allows for transitioning between any mode (USB-only to 4DP, 4DP to USB+2DP, and so forth). The USB-C standard requires transitioning to the USB Safe State before entering to or exiting from an Alternate Mode. The USB Safe State defines an electrical state for the SBU1/2 and SSTX/SSRX for DFPs, UFPs, and Active Cables when transitioning between USB and an Alternate Mode. Therefore before entering to or exiting from four lane DP mode it is recommended to first enter the Disable state (CTLSEL = 2'b00 or (CTL0 pin = 0 and CTL1 pin = 0)).

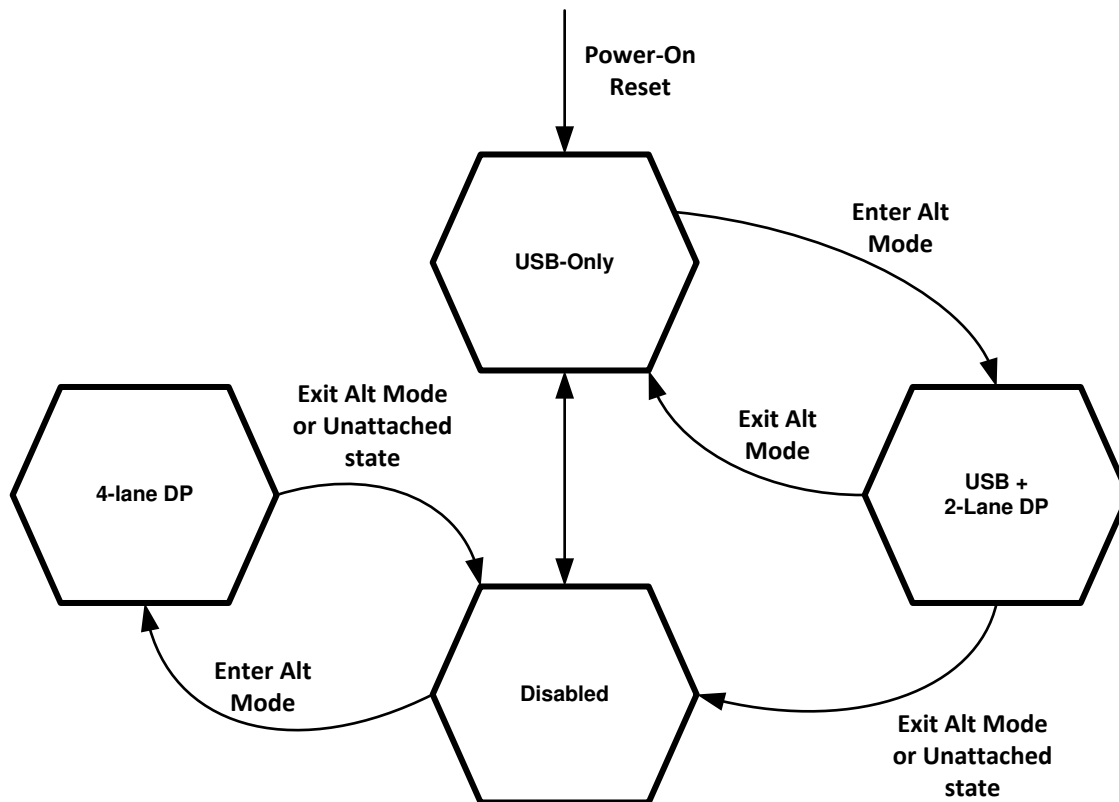

**Figure 28. Recommended Mode Transitions**

### 8.5.2 Pseudocode Examples

#### 8.5.2.1 Fast AEQ with linear redriver mode

```
// (address, data)
// Initial power-on configuration.

            (0x0A, 0x11), // EQ_OVERRIDE and USB3.1 default.

            (0x1C, 0x81), // Fast AEQ enable

            (0x10, 0x55), // DP lanes 0 and 1 EQ

            (0x11, 0x55), // DP lanes 2 and 2 EQ

            (0x1D, 0x10), // FASTAEQ_LIMITS to 80mV

            (0x1E, 0x55), // USB-C Rx1/Rx2 Long channel EQ.

            (0x20, 0x00), // USB-C Rx1/Rx2 Short channel EQ.
```

## Programming (continued)

```
                  (0x21, 0x05), // SSTX receiver EQ.

// Controls when selecting between USB and DP modes.
If (USBonly_normal)

                  { (0x0A,0x11); }
Else if (USBonly_flip)

                  { (0x0A, 0x15); }
Else if (Dponly_normal)

                  { (0x0A, 0x12); }
Else if (Dponly_flip)

                  { (0x0A, 0x16); }
Else if (DPUSB_normal)

                  { (0x0A, 0x13); }
Else if (DPUSB_flip)

                  { (0x0A,0x17); }
Else // Nothing connected to Type-C

                  { (0x0A, 0x10); }
```

### 8.5.2.2  Fast AEQ with limited redriver mode

```
// (address, data)
// Initial power-on configuration.

                  (0x0A, 0x91), // EQ_OVERRIDE and USB3.1 default.

                  (0x0B, 0x24), // Pre-shoot and De-emphasis control

                  (0x1C, 0x81), // Fast AEQ enable

                  (0x10, 0x55), // DP lanes 0 and 1 EQ

                  (0x11, 0x55), // DP lanes 2 and 2 EQ

                  (0x1D, 0x10), // FASTAEQ_LIMITS to 80mV

                  (0x1E, 0x55), // USB-C Rx1/Rx2 Long channel EQ.

                  (0x20, 0x00), // USB-C Rx1/Rx2 Short channel EQ.

                  (0x21, 0x05), // SSTX receiver EQ.

                  (0x32, 0x40), // VOD Control.

// Controls when selecting between USB and DP modes.
If (USBonly_normal)

                  { (0x0A,0x91); }
Else if (USBonly_flip)

                  { (0x0A, 0x95); }
Else if (Dponly_normal)

                  { (0x0A, 0x92); }
Else if (Dponly_flip)

                  { (0x0A, 0x96); }
Else if (DPUSB_normal)

                  { (0x0A, 0x93); }
Else if (DPUSB_flip)

                  { (0x0A,0x97); }
Else // Nothing connected to Type-C
```

## Programming (continued)

```
                { (0x0A, 0x90); }
```

### 8.5.2.3  Full AEQ with linear redriver mode

```
// (address, data)
// Initial power-on configuration.

              (0x0A, 0x11), // EQ_OVERRIDE and USB3.1 default.

              (0x1C, 0x83), //Full AEQ enable

              (0x10, 0x55), // DP lanes 0 and 1 EQ

              (0x11, 0x55), // DP lanes 2 and 2 EQ

              (0x20, 0x11), // USB-C Rx1/Rx2 EQ. Not used in Full AEQ

              (0x21, 0x05), // SSTX receiver EQ.

// Controls when selecting between USB and DP modes.
If (USBonly_normal)

              { (0x0A,0x11); }
Else if (USBonly_flip)

              { (0x0A, 0x15); }
Else if (Dponly_normal)

              { (0x0A, 0x12); }
Else if (Dponly_flip)

              { (0x0A, 0x16); }
Else if (DPUSB_normal)

              { (0x0A, 0x13); }
Else if (DPUSB_flip)

              { (0x0A,0x17); }
Else // Nothing connected to Type-C

              { (0x0A, 0x10); }
```

### 8.5.2.4  Full AEQ with limited redriver mode

```
// (address, data)
// Initial power-on configuration.

              (0x0A, 0x91), // Limited Redriver, EQ_OVERRIDE and USB3.1 default.

              (0x0B, 0x24), // Pre-shoot and De-emphasis control

              (0x1C, 0x83), //Full AEQ enable

              (0x10, 0x55), // DP lanes 0 and 1 EQ

              (0x11, 0x55), // DP lanes 2 and 2 EQ

              (0x20, 0x11), // USB-C Rx1/Rx2 EQ. Not used in Full AEQ

              (0x21, 0x05), // SSTX receiver EQ.

              (0x32, 0x40), // VOD Control.

// Controls when selecting between USB and DP modes.
If (USBonly_normal)

              { (0x0A,0x91); }
Else if (USBonly_flip)
```

## Programming (continued)

```
                { (0x0A, 0x95); }
Else if (Dponly_normal)

                { (0x0A, 0x92); }
Else if (Dponly_flip)

                { (0x0A, 0x96); }
Else if (DPUSB_normal)

                { (0x0A, 0x93); }

| 1 | 1 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 0/1 |

### 8.5.4 TUSB1146 I$^2$C Slave Behavior

**Figure 29. I2C Write with Data**

The following procedure should be followed to write data to TUSB1146 I$^2$C registers (refer to Figure 29):
1. The master initiates a write operation by generating a start condition (S), followed by the TUSB1146 7-bit address and a zero-value "W/R" bit to indicate a write cycle.
2. The TUSB1146 acknowledges the address cycle.
3. The master presents the register offset within TUSB1146 to be written, consisting of one byte of data, MSB-first.
4. The TUSB1146 acknowledges the sub-address cycle.

5. The master presents the first byte of data to be written to the I2C register.

6. The TUSB1146 acknowledges the byte transfer

7. The master may continue presenting additional bytes of data to be written, with each byte transfer completing with an acknowledge from the TUSB1146.

8. The master terminates the write operation by generating a stop condition (P).

**Figure 30. I2C Read without repeated Start**

The following procedure should be followed to read the TUSB1146 I2C registers without a repeated Start (refer Figure 30).

1. The master initiates a read operation by generating a start condition (S), followed by the TUSB1146 7-bit address and a zero-value "W/R" bit to indicate a read cycle.

2. The TUSB1146 acknowledges the 7-bit address cycle.

3. Following the acknowledge the master continues sending clock.

4. The TUSB1146 transmit the contents of the memory registers MSB-first starting at register 00h or last read register offset+1. If a write to the I2C register occurred prior to the read, then the TUSB1146 shall start at the register offset specified in the write.

5. The TUSB1146 waits for either an acknowledge (ACK) or a not-acknowledge (NACK) from the master after each byte transfer; the I2C master acknowledges reception of each data byte transfer.

6. If an ACK is received, the TUSB1146 transmits the next byte of data as long as master provides the clock. If a NAK is received, the TUSB1146 stops providing data and waits for a stop condition (P).

7. The master terminates the write operation by generating a stop condition (P).

**Figure 31. I2C Read with repeated Start**

The following procedure should be followed to read the TUSB1146 I2C registers with a repeated Start (refer Figure 31).

1. The master initiates a read operation by generating a start condition (S), followed by the TUSB1146 7-bit address and a zero-value "W/R" bit to indicate a write cycle.

2. The TUSB1146 acknowledges the 7-bit address cycle.

3. The master presents the register offset within TUSB1146 to be written, consisting of one byte of data, MSB-first.

4. The TUSB1146 acknowledges the register offset cycle.

5. The master presents a repeated start condition (Sr).

6. The master initiates a read operation by generating a start condition (S), followed by the TUSB1146 7-bit

address and a one-value "W/R" bit to indicate a read cycle.

7. The TUSB1146 acknowledges the 7-bit address cycle.

8. The TUSB1146 transmit the contents of the memory registers MSB-first starting at the register offset.

9. The TUSB1146 shall wait for either an acknowledge (ACK) or a not-acknowledge (NACK) from the master after each byte transfer; the I$^2$C master acknowledges reception of each data byte transfer.

10. If an ACK is received, the TUSB1146 transmits the next byte of data as long as master provides the clock. If a NAK is received, the TUSB1146 stops providing data and waits for a stop condition (P).

11. The master terminates the read operation by generating a stop condition (P).

**Figure 32. I2C Write without data**

The following procedure should be followed for setting a starting sub-address for I$^2$C reads (refer to Figure 32).

1. The master initiates a write operation by generating a start condition (S), followed by the TUSB1146 7-bit address and a zero-value "W/R" bit to indicate a write cycle.

2. The TUSB1146 acknowledges the address cycle.

3. The master presents the register offset within TUSB1146 to be written, consisting of one byte of data, MSB-first.

4. The TUSB1146 acknowledges the register offset cycle.

5. The master terminates the write operation by generating a stop condition (P).

---

**NOTE**

After initial power-up, if no register offset is included for the read procedure (refer to Figure 30), then reads start at register offset 00h and continue byte by byte through the registers until the I$^2$C master terminates the read operation. During a read operation, the TUSB1146 auto-increments the I$^2$C internal register address of the last byte transferred independent of whether or not an ACK was received from the I2C master.

---

## 8.6 Register Maps

### 8.6.1 TUSB1146 Registers

Table 11 lists the TUSB1146 registers. All register offset addresses not listed in Table 11 should be considered as reserved locations and the register contents should not be modified.

**Table 11. TUSB1146 Registers**

| Offset | Acronym | Register Name | Section |
|---|---|---|---|
| 0xA | General_1 | General Register | Go |
| 0xB | DCI_TXEQ_CTRL | DCI and TX EQ Control | Go |
| 0x10 | DP01EQ_SEL | DisplayPort Lane 0 and 1 EQ Control | Go |
| 0x11 | DP23EQ_SEL | DisplayPort Lane 2 and 3 EQ Control | Go |
| 0x12 | DisplayPort_1 | AUX Snoop Status | Go |
| 0x13 | DisplayPort_2 | DP Lane Enable/Disable Control | Go |
| 0x1C | AEQ_CONTROL1 | AEQ Controls | Go |
| 0x1D | AEQ_CONTROL2 | AEQ Controls | Go |
| 0x1E | AEQ_LONG | AEQ setting for Long channel | Go |
| 0x20 | USBC_EQ | EQ control for RX1 and RX2 receivers | Go |
| 0x21 | SS_EQ | EQ Control for SSTX receiver | Go |
| 0x22 | USB3_MISC | Misc USB3 Controls | Go |
| 0x24 | USB_STATUS | USB state machine status | Go |
| 0x32 | VOD_CTRL | VOD Linearity and AEQ Controls | Go |
| 0x3B | AEQ_STATUS | Full and Fast AEQ status | Go |

Complex bit access types are encoded to fit into small table cells. Table 12 shows the codes that are used for access types in this section.

**Table 12. TUSB1146 Access Type Codes**

| Access Type | Code | Description |
|---|---|---|
| **Read Type** | | |
| R | R | Read |
| RH | R<br>H | Read<br>Set or cleared by hardware |
| **Write Type** | | |
| W | W | Write |
| W1S | W<br>1S | Write<br>1 to set |
| WS | W | Write |
| **Reset or Default Value** | | |
| -*n* | | Value after reset or the default value |

### 8.6.1.1 General_1 Register (Offset = 0xA) [reset = 0x1]

General_1 is shown in Table 13.

Return to the Summary Table.

This register is used to select between USB and DisplayPort modes as well as selecting the orientation of the MUX. Software should set EQ_OVERRIDE bit in order for EQ registers to be used instead of pins.

**Table 13. General_1 Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7 | SSRX_LIMIT_ENABLE | R/W | 0x0 | Limited redriver mode enable for SSRX transmitter.<br>0x0 = Linear Redriver<br>0x1 = Limited Redriver |
| 6 | RESERVED | R | 0x0 | Reserved |
| 5 | SWAP_HPDIN | R/W | 0x0 | Controls which pin HPDIN is derived from. Please note a sideaffect of setting this bit is DCI function will be disabled. Therefore if DCI support is required, then this field must remain cleared.<br>0x0 = HPDIN is in default location<br>0x1 = HPDIN location is swapped (PIN 23 to PIN 32, or PIN 32 to PIN 23). |
| 4 | EQ_OVERRIDE | R/W | 0x0 | Setting this field will allow software to use EQ settings from registers instead of value sampled from pins.<br>0x0 = EQ settings based on sampled state of EQ pins.<br>0x1 = EQ settings based on programmed value of each of the EQ registers. |
| 3 | HPDIN_OVERRIDE | R/W | 0x0 | Overrides HPDIN pin state.<br>0x0 = HPD_IN based on HPD_IN pin.<br>0x1 = HPD_IN high. |
| 2 | FLIP_SEL | R/W | 0x0 | This field controls the orientation.<br>0x0 = Normal Orientation<br>0x1 = Flip orientation. |
| 1-0 | CTLSEL | R/W | 0x1 | Controls the DP and USB modes.<br>0x0 = Disabled. All RX and TX for USB3 and DisplayPort are disabled.<br>0x1 = USB3.1 only enabled.<br>0x2 = Four Lanes of DisplayPort enabled.<br>0x3 = USB3.1 and Two DisplayPort Lanes. |

### 8.6.1.2 DCI_TXEQ_CTRL Register (Offset = 0xB) [reset = 0x6C]

DCI_TXEQ_CTRL is shown in Table 14.

Return to the Summary Table.

This register controls the pre-shoot and de-emphasis levels for SSRX when limited redriver mode is enabled.

**Table 14. DCI_TXEQ_CTRL Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7-6 | TX_PRESHOOT | R/W | 0x1 | SSRX TX preshoot level (pre-cursor).<br>0x0 = 1.5dB<br>0x1 = 2dB<br>0x2 = 2.3dB<br>0x3 = 2.8dB |
| 5 | TX_PRESHOOT_EN | R/W | 0x1 | SSRX TX preshoot (pre-cursor) enabled. Valid only when SSRX_LIMIT_ENABLE = 1.<br>0x0 = Disabled (0dB)<br>0x1 = Enabled |

### Table 14. DCI_TXEQ_CTRL Register Field Descriptions (continued)

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 4-3 | TX_DEEPHASIS | R/W | 0x1 | SSRX TX de-emphasis level (post-cursor)<br><br>0x0 = -1.5dB<br><br>0x1 = -2.1dB<br><br>0x2 = -3.2dB<br><br>0x3 = -3.8dB |
| 2 | TX_DEEPHASIS_EN | R/W | 0x1 | SSRX TX de-emphasis (post-cursor) enable. Valid only when SSRX_LIMIT_ENABLE = 1.<br><br>0x0 = Disabled (0dB)<br><br>0x1 = Enabled |
| 1-0 | DCI_CTL | R/W | 0x0 | Controls whether or not DCI function is enabled by FSM or software.<br><br>0x0 = DCI controlled by FSM<br><br>0x1 = DCI enabled using RX1P/N<br><br>0x2 = DCI enabled using RX2P/N<br><br>0x3 = DCI disabled. |

### 8.6.1.3 DP01EQ_SEL Register (Offset = 0x10) [reset = 0x0]

DP01EQ_SEL is shown in Table 15.

Return to the Summary Table.

This register controls the receiver equalization setting for the DisplayPort receivers 0 and 1.

### Table 15. DP01EQ_SEL Register Field Descriptions

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-4 | DP1EQ_SEL | RH/W | 0x0 | Field selects EQ for DP lane 1 pins. When EQ_OVERRIDE = 0b, this field reflects the sampled state of DPEQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for DP Lane 1 based on value written to this field. |
| 3-0 | DP0EQ_SEL | RH/W | 0x0 | Field selects EQ for DP lane 0 pins. When EQ_OVERRIDE = 0b, this field reflects the sampled state of DPEQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for DP Lane 0 based on value written to this field. |

### 8.6.1.4 DP23EQ_SEL Register (Offset = 0x11) [reset = 0x0]

DP23EQ_SEL is shown in Table 16.

Return to the Summary Table.

This register controls the receiver equalization setting for the DisplayPort receivers 2 and 3.

### Table 16. DP23EQ_SEL Register Field Descriptions

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-4 | DP3EQ_SEL | RH/W | 0x0 | Field selects EQ for DP lane 3 pins. When EQ_OVERRIDE = 0b, this field reflects the sampled state of DPEQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for DP Lane 3 based on value written to this field. |
| 3-0 | DP2EQ_SEL | RH/W | 0x0 | Field selects EQ for DP lane 2 pins. When EQ_OVERRIDE = 0b, this field reflects the sampled state of DPEQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for DP Lane 2 based on value written to this field. |

### 8.6.1.5 DisplayPort_1 Register (Offset = 0x12) [reset = 0x0]

DisplayPort_1 is shown in Table 17.

Return to the Summary Table.

This register provides status of AUX snooping when AUX Snooping is enabled.

**Table 17. DisplayPort_1 Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7 | RESERVED | R | 0x0 | Reserved |
| 6-5 | SET_POWER_STATE | RH | 0x0 | This field represents the snooped value of the AUX write to DPCD address 0x00600. When AUX_SNOOP_DISABLE = 0b, the enable/disable of DP lanes based on the snooped value. When AUX_SNOOP_DISABLE = 1b, then DP lane enable/disable are determined by state of DPx_DISABLE registers, where x = 0, 1, 2, or 3. This field is reset to 0h by hardware when CTLSEL1 changes from a 1b to a 0b. |
| 4-0 | LANE_COUNT_SET | RH | 0x0 | This field represents the snooped value of AUX write to DPCD address 0x00101 register. When AUX_SNOOP_DISABLE = 0b, DP lanes enabled specified by the snoop value. Unused DP lanes will be disabled to save power. When AUX_SNOOP_DISABLE = 1b, then DP lanes enable/disable are determined by DPx_DISABLE registers, where x = 0, 1, 2, or 3. This field is reset to 0h by hardware when CTLSEL1 changes from a 1b to a 0b. |

### 8.6.1.6 DisplayPort_2 Register (Offset = 0x13) [reset = 0x0]

DisplayPort_2 is shown in Table 18.

Return to the Summary Table.

This register provides controls for enabling and disabling AUX snooping and individual DP lanes.

**Table 18. DisplayPort_2 Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7 | AUX_SNOOP_DISABLE | R/W | 0x0 | Controls whether DP lanes are enabled based on AUX snooped value or registers. <br> 0x0 = AUX snoop enabled. <br> 0x1 = AUX snoop disabled. DP lanes are controlled by registers. |
| 6 | RESERVED | R | 0x0 | Reserved |
| 5-4 | AUX_SBU_OVR | R/W | 0x0 | This field overrides the AUXP/N to SBU1/2 connect and disconnect based on CTL1 and FLIP. Changing this field to 01b or 10b will allow traffic to pass through AUX to SBU regardless of the state of CTLSEL1 and FLIPSEL register. <br> 0x0 = AUX to SBU connection determined by CTLSEL1 and FLIPSEL <br> 0x1 = AUXP -> SBU1 and AUXN -> SBU2 <br> 0x2 = AUXP -> SBU2 and AUXN -> SBU1 <br> 0x3 = AUX to SBU open. |
| 3 | DP3_DISABLE | R/W | 0x0 | When AUX_SNOOP_DISABLE = 1b, this field can be used to enable or disable DP lane 3. When AUX_SNOOP_DISABLE = 0b, changes to this field will have no effect on lane 3 functionality. <br> 0x0 = DP Lane 3 enabled. <br> 0x1 = DP Lane 3 disabled. |

**Table 18. DisplayPort_2 Register Field Descriptions (continued)**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 2 | DP2_DISABLE | R/W | 0x0 | When AUX_SNOOP_DISABLE = 1b, this field can be used to enable or disable DP lane 2. When AUX_SNOOP_DISABLE = 0b, changes to this field will have no effect on lane 2 functionality. |
|  |  |  |  | 0x0 = DP Lane 2 enabled. |
|  |  |  |  | 0x1 = DP Lane 2 disabled. |
| 1 | DP1_DISABLE | R/W | 0x0 | When AUX_SNOOP_DISABLE = 1b, this field can be used to enable or disable DP lane 1. When AUX_SNOOP_DISABLE = 0b, changes to this field will have no effect on lane 1 functionality. |
|  |  |  |  | 0x0 = DP Lane 1 enabled. |
|  |  |  |  | 0x1 = DP Lane 1 disabled. |
| 0 | DP0_DISABLE | R/W | 0x0 | When AUX_SNOOP_DISABLE = 1b, this field can be used to enable or disable DP lane 0. When AUX_SNOOP_DISABLE = 0b, changes to this field will have no effect on lane 0 functionality. |
|  |  |  |  | 0x0 = DP Lane 0 enabled. |
|  |  |  |  | 0x1 = DP Lane 0 disabled. |

### 8.6.1.7  AEQ_CONTROL1 Register (Offset = 0x1C) [reset = 0xF0]

AEQ_CONTROL1 is shown in Table 19.

Return to the Summary Table.

This register is used to enable adaptive EQ and select between Fast and Full adaptive EQ.

**Table 19. AEQ_CONTROL1 Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-4 | FULLAEQ_UPPER_EQ | R/W | 0xF | Maximum EQ value to check for full AEQ mode |
| 3 | USB3_U1_DISABLE | R/W | 0x0 | This field when set will cause entry to U3 instead of U1 when electrical idle is detected. |
|  |  |  |  | 0x0 = U1 entry after electrical idle. |
|  |  |  |  | 0x1 = U3 entry after electrical idle. |
| 2-1 | AEQ_MODE | R/W | 0x0 | Selects between Fast and 2 Full Adaption modes |
|  |  |  |  | 0x0 = Fast AEQ. |
|  |  |  |  | 0x1 = Full AEQ with hits counted at mideye for every EQ. |
|  |  |  |  | 0x2 = Fast AEQ. |
|  |  |  |  | 0x3 = Full AEQ with hits counted at mideye only for EQ equal 0. |
| 0 | AEQ_EN | R/W | 0x0 | Controls whether or not adaptive EQ for USB downstream facing port is enabled. |
|  |  |  |  | 0x0 = AEQ disabled |
|  |  |  |  | 0x1 = AEQ enabled |

### 8.6.1.8  AEQ_CONTROL2 Register (Offset = 0x1D) [reset = 0x20]

AEQ_CONTROL2 is shown in Table 20.

Return to the Summary Table.

This register allows for controls for the Fast AEQ limits as well as adding or reducing final EQ value used by the Full AEQ function.

**Table 20. AEQ_CONTROL2 Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7 | OVER_EQ_SIGN | R/W | 0x0 | Selects the sign for OVER_EQ_CTRL field.<br><br>0x0 = positive<br>0x1 = negative |
| 6 | RESERVED | R | 0x0 | Reserved |
| 5-3 | FASTAEQ_LIMITS | R/W | 0x4 | Selects the upper/lower limits of DAC for determining short vs long channel.<br><br>0x0 = +/- 0mV<br>0x1 = +/- 40mV<br>0x2 = +/- 80mV<br>0x3 = +/- 120mV<br>0x4 = +/- 160mV<br>0x5 = +/- 200mV<br>0x6 = +/- 240mV<br>0x7 = +/- 280mV |
| 2-0 | OVER_EQ_CTRL | R/W | 0x0 | This field will increase or decrease the AEQ by value programmed into this field. For example, full AEQ value is 6 and this field is programmed to 2 and OVER_EQ_SIGN = 0, then EQ value used will be 8. This field is only used in Full AEQ mode.<br><br>0x0 = 0 or -8<br>0x1 = 1 or -7<br>0x2 = 2 or -6<br>0x3 = 3 or -5<br>0x4 = 4 or -4<br>0x5 = 5 or -3<br>0x6 = 6 or -2<br>0x7 = 7 or -1 |

### 8.6.1.9 AEQ_LONG Register (Offset = 0x1E) [reset = 0x77]

AEQ_LONG is shown in Table 21.

Return to the Summary Table.

This register is used to program the EQ used for long channel setting when Fast AEQ is enabled.

**Table 21. AEQ_LONG Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7-4 | LONG_EQ2 | R/W | 0x7 | When AEQ_EN = 1 and AEQ_MODE = x0, selects EQ setting for USB downstream facing port1 (RX2) when long channel is detected. Value programmed into this field should provide best Rx JTOL results for long channel configuration. |
| 3-0 | LONG_EQ1 | R/W | 0x7 | When AEQ_EN = 1 and AEQ_MODE = x0, selects EQ setting for USB downstream facing port2 (RX1) when long channel is detected. Value programmed into this field should provide best Rx JTOL results for long channel configuration. |

### 8.6.1.10 USBC_EQ Register (Offset = 0x20) [reset = 0x0]

USBC_EQ is shown in Table 22.

Return to the Summary Table.

This register controls the receiver equalization setting for the DFP (RX1 and RX2).

**Table 22. USBC_EQ Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-4 | EQ2_SEL | RH/W | 0x0 | If AEQ_EN = 0, this field selects EQ for USB3.1 RX2 receiver which faces the USB-C receptacle. When EQ_OVERRIDE = 0b, this field reflects the sampled state of EQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for RX2p/n pins based on value written to this field. When AEQ_EN = 1 and AEQ_MODE = x0, selects EQ setting for USB downstream facing port1 (RX2) when short channel is detected. Value programmed into this field should provide best Rx JTOL results for short channel configuration. |
| 3-0 | EQ1_SEL | RH/W | 0x0 | If AEQ_EN = 0, this field selects EQ for USB3.1 RX1 receiver which faces the USB-C receptacle. When EQ_OVERRIDE = 0b, this field reflects the sampled state of EQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for RX1p/n pins based on value written to this field. When AEQ_EN = 1 and AEQ_MODE = x0, selects EQ setting for USB downstream facing port1 (RX1) when short channel is detected. Value programmed into this field should provide best Rx JTOL results for short channel configuration. |

### 8.6.1.11 SS_EQ Register (Offset = 0x21) [reset = 0x0]

SS_EQ is shown in Table 23.

Return to the Summary Table.

This register controls the receiver equalization setting for the UFP (SSTX).

**Table 23. SS_EQ Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-4 | RESERVED | R | 0x0 | Reserved |
| 3-0 | SSEQ_SEL | RH/W | 0x0 | This field selects EQ for USB3.1 SSTX receiver which faces the USB host. When EQ_OVERRIDE = 0b, this field reflects the sampled state of SSEQ[1:0] pins. When EQ_OVERRIDE = 1b, software can change the EQ setting for SSTXp/n pins based on value written to this field. |

### 8.6.1.12 USB3_MISC Register (Offset = 0x22) [reset = 0x44]

USB3_MISC is shown in Table 24.

Return to the Summary Table.

**Table 24. USB3_MISC Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7 | RXD_START_TERM | R/W | 0x0 | Termination setting at start of RX detection following warm reset and at entry to SS.Inactive.<br><br>0x0 = Maintain termination. Same as tusb1046<br><br>0x1 = Turn off termination. Avoid compliance failures due to race between local and remote rxd in case of disconnect. If connection remains next state was polling regardless. |
| 6 | LFPS_EQ | R/W | 0x1 | Controls whether settings of EQ based on EQ1_SEL, EQ2_SEL, and SSEQ_SEL applies to received LFPS signal.<br><br>0x0 = EQ set to zero when receiving LFPS<br><br>0x1 = EQ set by the related registers when receiving LFPS. |
| 5 | U2U3_LFPS_DEBOUNCE | R/W | 0x0 | Controls whether or not incoming LFPS is debounced or not.<br><br>0x0 = No debounce of LFPS before U2/U3 exit.<br><br>0x1 = 200us debounce of LFPS before U2/U3 exit. |

Product Folder Links: TUSB1146

**Table 24. USB3_MISC Register Field Descriptions (continued)**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 4 | DISABLE_U2U3_RXDET | R/W | 0x0 | Controls whether or not Rx.Detect is performed in U2/U3 state.<br>0x0 = Rx.Detect in U2/U3 enabled.<br>0x1 = Rx.Detect in U2/U3 disabled. |
| 3-2 | DFP_RXDET_INTERVAL | R/W | 0x1 | This field controls the Rx.Detect interval for the downstream facing port (TX1P/N and TX2P/N).<br>0x0 = 4ms<br>0x1 = 6ms<br>0x2 = 36ms<br>0x3 = 84ms |
| 1 | DIS_WARM_RESET_RXD | R/W | 0x0 | Disables receiver detection following warm reset if device starts polling during warm reset..<br>0x0 = whether receiver detection is done following warm reset depends on other settings.<br>0x1 = if USB FSM detects that device started polling during warm reset, it will not do receiver detection. |
| 0 | USB_COMPLIANCE_CTRL | R/W | 0x0 | Controls whether compliance mode detection is determined by FSM or disabled<br>0x0 = Compliance mode determined by FSM.<br>0x1 = Compliance mode disabled. |

### 8.6.1.13  USB_STATUS Register (Offset = 0x24) [reset = 0x41]

USB_STATUS is shown in Table 25.

Return to the Summary Table.

**Table 25. USB_STATUS Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|-----|-------|------|-------|-------------|
| 7 | USB_FASTAEQ_STAT | RH | 0x0 | When AEQ_EN = 1 and AEQ_MODE = x0, this status field indicates whether short or long EQ setting is used. When AEQ_EN = 0, this field will always default to 0h.<br>0x0 = Short channel EQ used.<br>0x1 = Long channel EQ used. |
| 6 | USB_AEQDONE_STAT | RH | 0x1 | This field is low while AEQ is active and high when it is done. It is valid when U0_STAT and AEQ_EN = 1 or when FORCE_AEQ_EN = 1 and HW has reset FORCE_AEQ back to 0.<br>0x0 = AEQ is running<br>0x1 = AEQ is done |
| 5 | AEQ_HC_OVERFLOW | RH | 0x0 | 13-bit AEQ hit counter overflow status |
| 4 | RESERVED | R | 0x0 | Reserved |
| 3 | CM_ACTIVE | RH | 0x0 | Compliance mode status.<br>0x0 = Not in USB3.1 compliance mode.<br>0x1 = In USB3.1 compliance mode. |
| 2 | U0_STAT | RH | 0x0 | U0 Status. Set if enters U0 state. |
| 1 | U2U3_STAT | RH | 0x0 | U2/U3 Status. Set if enters U2/U3 state. |
| 0 | DISC_STAT | RH | 0x1 | Disconnect Status. Set if enters Disconnect state. |

### 8.6.1.14 VOD_CTRL Register (Offset = 0x32) [reset = 0x40]

VOD_CTRL is shown in Table 26.

Return to the Summary Table.

This register controls the transmitters output linearity range for both UFP and DFP. When device is configured for limited redriver (SSRX_LIMIT_ENABLE field is set), USB_SSRX_VOD controls the VOD level for SSRX limited driver.

**Table 26. VOD_CTRL Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-6 | LFPS_TX12_VOD | R/W | 0x1 | VOD linearity control for TX1 or TX2 when LFPS is being transmitted.<br><br>0x0 = LINR_L3 (highest)<br>0x1 = LINR_L2<br>0x2 = LINR_L1<br>0x3 = LINR_L0 (lowest) |
| 5-4 | DP_VOD | R/W | 0x0 | VOD linearity control for DP paths.<br><br>0x0 = LINR_L3 (highest)<br>0x1 = LINR_L2<br>0x2 = LINR_L1<br>0x3 = LINR_L0 (lowest) |
| 3-2 | USB_TX12_VOD | R/W | 0x0 | VOD linearity control for USB downstream facing ports (TX1 and TX2).<br><br>0x0 = LINR_L3 (highest)<br>0x1 = LINR_L2<br>0x2 = LINR_L1<br>0x3 = LINR_L0 (lowest) |
| 1-0 | USB_SSRX_VOD | R/W | 0x0 | VOD linearity control for USB upstream facing port (SSRX). When SSRX_LIMIT_ENABLE = 1, then this field controls the limited VOD for SSRX.<br><br>0x0 = LINR_L3 (highest)<br>0x1 = LINR_L2<br>0x2 = LINR_L1<br>0x3 = LINR_L0 (lowest) |

### 8.6.1.15 AEQ_STATUS Register (Offset = 0x3B) [reset = 0x0]

AEQ_STATUS is shown in Table 27.

Return to the Summary Table.

This register provides the status of AEQ function.

**Table 27. AEQ_STATUS Register Field Descriptions**

| Bit | Field | Type | Reset | Description |
|---|---|---|---|---|
| 7-5 | RESERVED | R | 0x0 | Reserved |
| 4 | DONE_STAT | RH | 0x0 | This flag is set after DAC wait timer expires. |
| 3-0 | AEQ_STAT | RH | 0x0 | Optimal EQ determined by FSM after the completion of Full AEQ. This field will also indicate EQ used for Fast AEQ. This field will include the value programmed into OVER_EQ_CTRL field. |

# 9 Application and Implementation

**NOTE**

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## 9.1 Application Information

The TUSB1146 is a linear redriver designed specifically to compensation for intersymbol interference (ISI) jitter caused by signal attenuation through a passive medium like PCB traces and cables. Because the TUSB1146 has four independent DisplayPort 2.0 inputs, one upstream facing USB 3.1 Gen1/Gen2 input, and two downstream facing USB 3.1 Gen1/Gen2 inputs, it can be optimized to correct ISI on all those seven inputs through 16 different equalization choices. Placing the TUSB1146 between a USB3.1 Host/DisplayPort 2.0 GPU and a USB3.1 Type-C receptacle can correct signal integrity issues resulting in a more robust system.

## 9.2 Typical Application

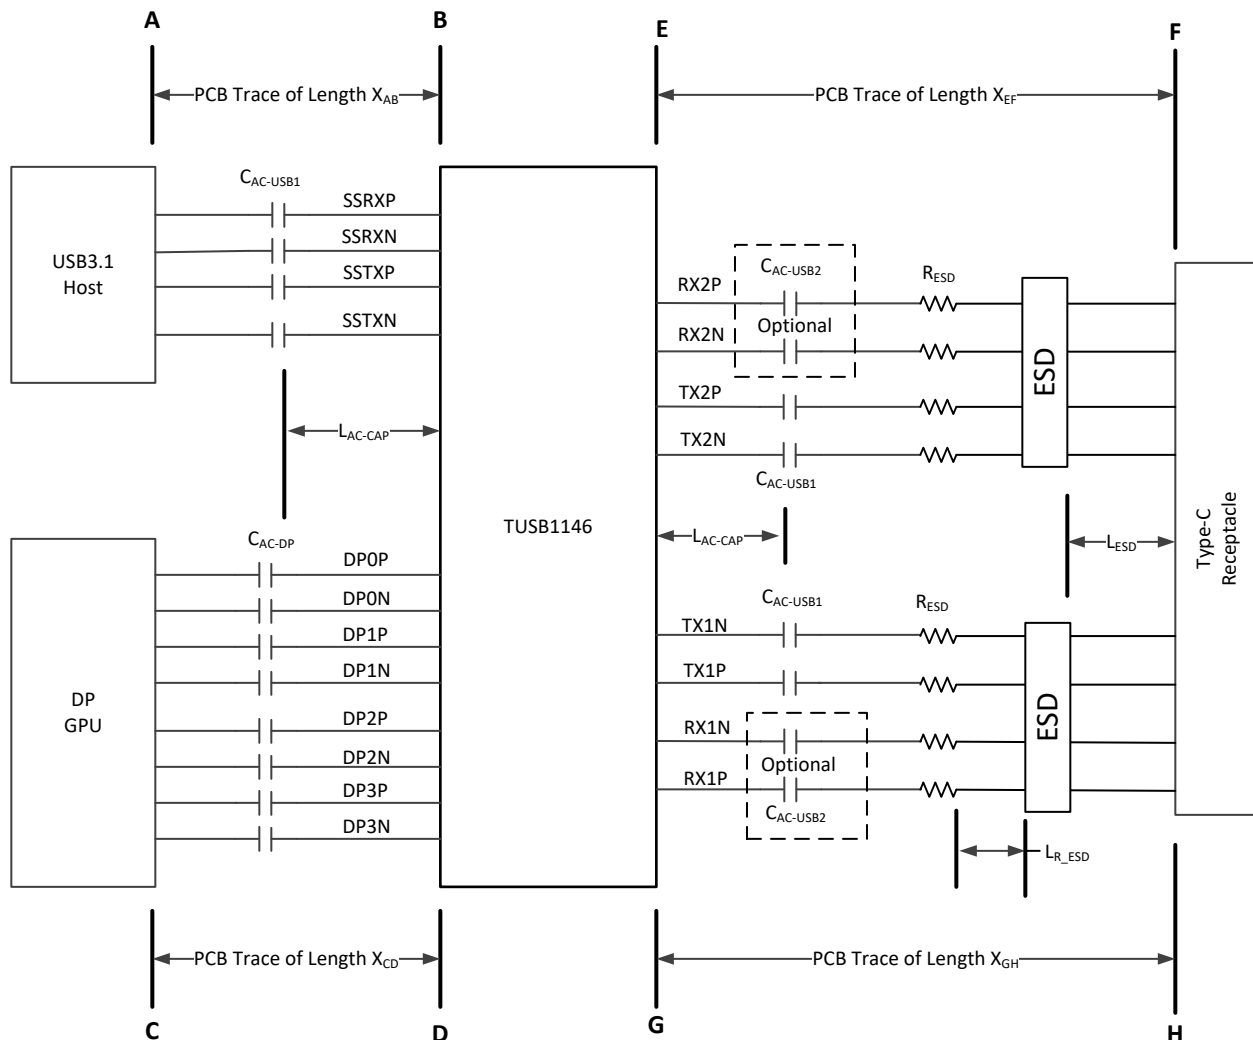

**Figure 33. TUSB1146 in a Host Application**

## Typical Application  (continued)

### 9.2.1   Design Requirements

For this design example, use the parameters shown in Table 28.

**Table 28. Design Parameters**

| PARAMETER | VALUE |
|---|---|
| 10Gbps USB3.1 pre-channel A to B PCB trace length, $X_{AB}$. Refer to Figure 33. | 2 inches <= $X_{AB}$ <= 12 inches - [MAX ($X_{EF}$ or $X_{GH}$)] |
| 10Gbps DP pre-channel C to D PCB trace length, $X_{CD}$. Refer to Figure 33. | 4 inches <= $X_{CD}$ <= 14 inches - [MAX ($X_{EF}$ or $X_{GH}$)] |
| 10Gbps USB and DP post channel E to F PCB trace length, $X_{EF}$. Refer to Figure 33. | up to 4 inches |
| 10Gbps USB and DP post channel G to H PCB trace length, $X_{GH}$. Refer to Figure 33. | up to 4 inches |
| Minimum distance of the AC capacitors from TUSB1146, $L_{AC\text{-}CAP}$ | 0.4 inches |
| Maximum distance of ESD component from the USB-C receptacle, $L_{ESD}$ | 0.5 inches |
| Maximum distance of series resistor ($R_{ESD}$) from ESD component, $L_{R\_ESD}$. | 0.25 inches |
| DCI Support (Y/N) | Yes |
| $C_{AC\text{-}USB1}$ AC-coupling capacitor (75 nF to 265 nF) | 220 nF |
| $C_{AC\text{-}USB2}$ AC-coupling capacitor (297 nF to 363 nF) — DCI Supported | No AC capacitor. RX1 and RX2 must be DC coupled to USB-C receptacle. |
| $C_{AC\text{-}USB2}$ AC-coupling capacitor (297 nF to 363 nF) — DCI Not Supported | Options:<br>• RX1 and RX2 are DC coupled to USB-C receptacle<br>• 330nF AC couple with $R_{RX}$ resistor<br>• 330nF AC couple without $R_{RX}$ resistor |
| Optional $R_{RX}$ resistor (220kΩ +/- 5%) | No used |
| $C_{AC\text{-}DP}$ AC-coupling capacitor (75 nF to 265 nF) | 220 nF |
| $R_{ESD}$ (0 ohms to 2.2 ohms) | 1 ohm |
| $V_{CC}$ supply (3 V to 3.6 V) | 3.3 V |
| I$^2$C Mode or GPIO Mode | I$^2$C Mode. (I2C_EN pin != "0") |
| 1.8V or 3.3V I2C Interface | 3.3V I2C. Pull-up the I2C_EN pin to 3.3V with a 1K ohm resistor. |

### 9.2.2   Detailed Design Procedure

A typical usage of the TUSB1146 device is shown in Figure 34. The device can be controlled either through its GPIO pins or through its I$^2$C interface. In the example shown below, a Type-C PD controller is used to configure the device through the I$^2$C interface. When configured for I$^2$C mode and system does not support DCI, pins 29 and 32 can be left unconnected. If DCI is supported in the system, then connect through a 22-ohm resistor DCI_CLK and DCI_DAT to appropriate PCH GPIO pins. In I$^2$C mode, the equalization settings for each receiver can be independently controlled through I$^2$C registers. For this reason, all of the equalization pins (EQ[1:0], SSEQ[1:0], and DPEQ[1:0]) can be left unconnected. If these pins are left unconnected, the TUSB1146 7-bit I2C slave address will be 0x12 because both DPEQ0/A1 and SSEQ0/A0 will be at pin level "F". If a different I2C slave address is desired, DPEQ0/A1 and SSEQ0/A0 pins should be set to a level which produces the desired I2C slave address.

### 9.2.2.1 USB and DP Upstream Facing Port (USB Host / DP GPU to USB-C receptacle) Configuration

Configuring the TUSB1146 for the USB and DP downstream direction involves understanding the insertion loss (SDD21) of the pre-channel ($X_{AB}$ and $X_{CD}$). The TUSB1146's DPEQ[1:0] pins and SSEQ[1:0] pins if GPIO mode ,or if I2C mode, SSEQ_SEL and DPEQx_SEL registers should be set to the level of the pre-channel insertion loss at 5GHz. A good rule of thumb for FR4 trace insertion loss at 5GHz is ~-1dB per inch. Using this rule of thumb, if the pre-channel for USB ($X_{AB}$) is 8-inches, the TUSB1146 SSEQ should be programmed to -8dB. If the pre-channel insertion loss for DP ($X_{CD}$) is 10-inches, then DPEQ should be programmed to -10dB. Refer to Table 8 for USB SSEQ settings and to Table 9 for DP EQ settings.

### 9.2.2.2 USB Downstream Facing Port (USB-C receptacle to USB Host) Configuration

#### 9.2.2.2.1 Fixed Equalization

In Fixed EQ operation, a single EQ setting is used for all possible devices inserted into the USB-C receptacle (with or without USB cable). It is recommended to set TUSB1146 EQ[1:0] pins if GPIO mode, or EQ1_SEL and EQ2_SEL if I2C mode to about 4db to 5dB greater than loss of the post channel (MIN($X_{EF}$, $X_{GH}$)). For example, if post channel is 0.5 inches, then assuming -1dB per inch at 5GHz, EQ1_SEL and EQ2_SEL should be programmed to 4.5 to 5.5dB. It is recommended to perform USB3.1 Rx JTOL long and short channel tests to optimize the setting. Depending of the USB 3.1 Host, a single EQ setting which satisfies both the long and short channel tests may not be possible. If this is the case, then it is recommended to use Fast AEQ mode.

#### 9.2.2.2.2 Fast Adaptive Equalization

Fast Adaptive EQ will distinguish between a short and long channel and select a pre-determined EQ setting based on which channel is detected. Fast AEQ is available in both GPIO and I2C mode but it is highly recommended to use this feature when TUSB1146 is configured in I2C mode. In I2C mode Fast AEQ is enabled when AEQ_MODE = 0 and AEQ_EN = 1.

The EQ setting used for short channel should be programmed into EQ1_SEL and EQ2_SEL registers. It is recommended to program these registers about 1dB to 2dB more than the loss of post channel (MIN($X_{EF}$, $X_{GH}$)). For example, if post channel is 0.5 inches, then assuming -1dB insertion loss per inch at 5GHz, EQ1_SEL and EQ2_SEL should be programmed to 1.5 to 2.5dB. It is recommended to perform USB3.1 Rx JTOL Short channel test to find the optimal short channel setting.

The EQ setting used for long channel should be programmed into LONG_EQ1 and LONG_EQ2. It is recommended to program these registers about 4 to 5dB more than the loss of post channel (MIN($X_{EF}$, $X_{GH}$)). For example, if post channel is 0.5 inches, then assuming -1dB per inch at 5GHz, LONG_EQ1 and LONG_EQ2 should be programmed to 4.5 to 5.5dB. It is recommended to perform USB3.1 Rx JTOL Long channel test to find the optimal long channel setting.

#### 9.2.2.2.3 Full Adaptive Equalization

In Full AEQ mode, the TUSB1146 will always determine the best settings regardless if the channel is short, long or somewhere in between. The Full AEQ feature is disabled by default. Full AEQ is enabled when AEQ_MODE = 1 and AEQ_EN = 0x1 or 0x3.

## 10  Power Supply Recommendations

The TUSB1146 is designed to operate with a 3.3-V power supply. Levels above those listed in the *Absolute Maximum Ratings* table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors should be used to reduce noise and improve power supply integrity. A 0.1-µF capacitor should be used on each power pin.

# 11 Layout

## 11.1 Layout Guidelines

1. SSTXP/N, SSRXP/N, RX1P/N, RX2PN, TX1P/N, and TX2P/N pairs should be routed with controlled 90-$\Omega$ differential impedance (±10%).

2. DP[3:0]P/N pairs should be routed with controlled 90-$\Omega$ differential impedance (±10%).

3. There is no inter-pair length match requirement between SSTXP/N and SSRXP/N.

4. Inter-pair matching between DP lanes (DP[3:0]) from GPU through TUSB1146 to the USB-C receptacle should be kept to less than 100 mils.

5. Keep away from other high speed signals.

6. Intra-pair routing (between P and N) should be kept to less than 5 mils.

7. Length matching should be near the location of mismatch.

8. Each pair should be separated at least by 3 times the signal trace width.

9. The use of bends in differential traces should be kept to a minimum. When bends are used, the number of left and right bends should be as equal as possible and the angle of the bend should be ≥ 135 degrees. This will minimize any length mismatch causes by the bends and therefore minimize the impact bends have on EMI.

10. Route all differential pairs on the same of layer.

11. The number of vias should be kept to a minimum. It is recommended to keep the vias count to 2 or less.

12. Keep traces on layers adjacent to ground plane.

13. Do not route differential pairs over any plane split.

14. Adding Test points will cause impedance discontinuity, and therefore, negatively impact signal performance. If test points are used, they should be placed in series and symmetrically. They must not be placed in a manner that causes a stub on the differential pair.

15. Highly recommended to have reference plane void under USB-C receptacle's super speed pins to minimize the capacitance effect of the receptacle.

16. Highly recommended to have reference plane void under the AC coupling capacitances.

## 11.2  Layout Example

**Figure 42.  Layout Example**

# 12 Device and Documentation Support

## 12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

## 12.2 Community Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

## 12.3 Trademarks

E2E is a trademark of Texas Instruments.
VESA is a registered trademark of Video Electronics Standards Association Corporation California.

## 12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 12.5 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

# 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead finish/ Ball material (6) | MSL Peak Temp (3) | Op Temp (°C) | Device Marking (4/5) | Samples |

**(1)** The marketing status values are defined as follows:
**ACTIVE:** Product device recommended for new designs.
**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.
**OBSOLETE:** TI has discontinued the production of the device.

**(2)** **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

**(3)** MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**(4)** There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

**(5)** Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

**(6)** Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
