## TPS22960 Low-Input Voltage, Dual-Load Switch With Controlled Turnon

## 1 Features

- Integrated Dual-Load Switch
- Input Voltage Range: 1.62 V to 5.5 V
- Low ON-State Resistance
- $\mathrm{r}_{\mathrm{ON}}=342 \mathrm{~m} \Omega$ at $\mathrm{V}_{\mathrm{IN}}=5.5 \mathrm{~V}$
- $\mathrm{r}_{\mathrm{ON}}=435 \mathrm{~m} \Omega$ at $\mathrm{V}_{\mathrm{IN}}=3.3 \mathrm{~V}$
- $r_{\mathrm{ON}}=523 \mathrm{~m} \Omega$ at $\mathrm{V}_{\mathbb{I N}}=2.5 \mathrm{~V}$
- $r_{\mathrm{ON}}=737 \mathrm{~m} \Omega$ at $\mathrm{V}_{\text {IN }}=1.8 \mathrm{~V}$
- $500-\mathrm{mA}$ Maximum Continuous Switch Current
- Low Quiescent Current and Shutdown Current
- Controlled Switch Output Rise Time:
$75 \mu \mathrm{~s}$ or $660 \mu \mathrm{~s}$
- Integrated Quick Output Discharge Transistor
- ESD Performance Tested Per JESD 22
- 2000-V Human Body Model
(A114-B, Class II)
- 1000-V Charged-Device Model (C101)
- 8-Pin SOT (DCN) Package: $3 \mathrm{~mm} \times 3 \mathrm{~mm}$
- 8-Pin UQFN (RSE) Package: $1.5 \mathrm{~mm} \times 1.5 \mathrm{~mm}$

## 2 Applications

- GPS Devices
- Cell Phones/PDAs
- MP3 Players
- Digital Cameras

## 3 Description

The TPS22960 is a small low-ron dual-channel load switch with controlled turnon. The devices contain two P-channel MOSFETs that can operate over an input voltage range of 1.62 V to 5.5 V . Each switch is independently controlled by on/off inputs (ON1 and ON2), which are capable of interfacing directly with low-voltage control signals. In TPS22960 a 85- $\Omega$ onchip load resistor is added for quick discharge when the switch is turned off.

The rise time (slew-rate) of the device is internally controlled in order to avoid inrush current, and it can be slowed down if needed using the SR pin: at 3.3 V , TPS22960 features a $75-\mu$ s rise time with the SR pin tied to ground and $660-\mu \mathrm{s}$ with the SR pin tied to high.
The TPS22960 is available in a space-saving 8-pin UQFN package and in an 8 -pin SOT package. It is characterized for operation over the free-air temperature range of $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$.

| Device Information $^{\mathbf{( 1 )}}$ |  |

4 Revision History
NOTE: Page numbers for previous revisions may differ from page numbers in the current version.
Changes from Revision C (July 2015) to Revision D Page

- Made changes to Application Information ..... 1
Changes from Revision B (August 2013) to Revision C Page
- Added Pin Configuration and Functions section, ESD Ratings table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section ..... 1
- Updated the Thermal Information table to remove $220^{\circ} \mathrm{C} / \mathrm{W}$ and $116^{\circ} \mathrm{C} / \mathrm{W}$ from the junction-to-ambient thermal resistance, and $123^{\circ} \mathrm{C} / \mathrm{W}$ and $60^{\circ} \mathrm{C} / \mathrm{W}$ from the junction-to-case (top) thermal resistance ..... 4
- Changed values $>100^{\circ} \mathrm{C} / \mathrm{W}$ in the Thermal Information table to contain only 3 significant figures ..... 4
Changes from Revision A (August 2011) to Revision B ..... Page
- Clarified text in the Description ..... 1
- Added $\mathrm{T}_{\mathrm{J}}$ to the Absolute Maximum Ratings table ..... 3
- Updated Table 2 in Device Functional Modes. ..... 13
Changes from Original (April 2009) to Revision A Page
- Changed $r_{O N}$ values for $\mathrm{V}_{\mathrm{INX}}=1.8 \mathrm{~V}\left(25^{\circ} \mathrm{C}\right)$ From: Typ 714, Max 855 To: Typ 737, Max 1100 ..... 5
- Changed $r_{\text {ON }}$ values for $\mathrm{V}_{\operatorname{INX}}=1.8 \mathrm{~V}$ (Full) From: Max 995 To: Max 1300 ..... 5
- Changed $r_{\text {ON }}$ values for $V_{\mathrm{INX}}=1.62 \mathrm{~V}\left(25^{\circ} \mathrm{C}\right)$ From: Typ 830, Max 950 To: Typ 848, Max 1300 ..... 5
- Changed $r_{\mathrm{ON}}$ values for $\mathrm{V}_{\mathbb{I N X}}=1.62 \mathrm{~V}$ (Full) From: Max 1100 To: Max 1500 ..... 5

## 5 Pin Configuration and Functions

Pin Functions

| PIN |  |  | 1/0 | DESCRIPTION |
| :---: | :---: | :---: | :---: | :---: |
| NAME | SOT | UQFN |  |  |
| $\mathrm{V}_{\text {IN1 }}$ | 1 | 1 | 1 | Switch 1 input; bypass this input with a ceramic capacitor to GND |
| ON1 | 2 | 2 | I | Switch 1 control input, active high. Do not leave floating. |
| ON2 | 3 | 7 | 1 | Switch 2 control input, active high. Do not leave floating. |
| $\mathrm{V}_{\text {IN2 }}$ | 4 | 8 | 1 | Switch 2 input; bypass this input with a ceramic capacitor to GND |
| $\mathrm{V}_{\text {OUT2 }}$ | 5 | 5 | 0 | Switch 2 output |
| GND | 6 | 6 | - | Ground |
| SR | 7 | 3 | 1 | Slew rate control pin. $\mathrm{SR}=\mathrm{GND}$ translates into a $75-\mu \mathrm{s}$ rise time; $\mathrm{SR}=$ high translates into a $660-\mu \mathrm{s}$ rise time |
| $\mathrm{V}_{\text {OUT1 }}$ | 8 | 4 | 0 | Switch 1 output |

## 6 Specifications

### 6.1 Absolute Maximum Ratings

## (see ${ }^{(1)}$ )

|  |  | MIN | MAX |
| :--- | :--- | :---: | :---: |
| $\mathrm{V}_{\text {IN }}$ | Input voltage | -0.3 | 6 |
| $\mathrm{~V}_{\text {OUT }}$ | Output voltage | V |  |
| $\mathrm{V}_{\mathrm{ON}}$ | Input voltage | -0.3 | $\mathrm{~V}_{\text {IN }}+0.3$ |
| $\mathrm{I}_{\text {MAX }}$ | Maximum continuous switch current | V |  |
| $\mathrm{T}_{\mathrm{A}}$ | Operating free-air temperature | -40 | V |
| $\mathrm{~T}_{\mathrm{J}}$ | Maximum junction temperature | 0.5 | A |
| $\mathrm{~T}_{\text {stg }}$ | Storage temperature | -65 | ${ }^{\circ} \mathrm{C}$ |

(1) Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

|  |  | VALUE | UNIT |
| :---: | :---: | :---: | :---: |
| Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ${ }^{(1)}$ | 2000 | V |
|  | Charged-device model (CDM), per JEDEC specification JESD22C101 ${ }^{(2)}$ | 1000 |  |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

|  |  |  | MIN | MAX | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{V}_{\text {IN }}$ | Input voltage |  | 1.62 | 5.5 | V |
| $\mathrm{V}_{\text {OUT }}$ | Output voltage |  |  | $\mathrm{V}_{\text {IN }}$ | V |
| $\mathrm{V}_{1 \mathrm{H}}$ | High-level input voltage: ON1, ON2, SR | $\mathrm{V}_{\mathrm{INx}}=3.0 \mathrm{~V}$ to 5.5 V | 1.5 | 5.5 | V |
|  |  | $\mathrm{V}_{1 \mathrm{Nx}}=1.62 \mathrm{~V}$ to 3.0 V | 1.4 | 5.5 |  |
| $\mathrm{V}_{\text {IL }}$ | Low-level input voltage: ON1, ON2, SR | $\mathrm{V}_{\mathrm{INx}}=3.0 \mathrm{~V}$ to 5.5 V |  | 0.5 | V |
|  |  | $\mathrm{V}_{1 \mathrm{Nx}}=1.62 \mathrm{~V}$ to 3.0 V |  | 0.4 |  |
| $\mathrm{C}_{\text {IN }}$ | Input capacitor |  | $1^{(1)}$ |  | $\mu \mathrm{F}$ |

## 8 Detailed Description

### 8.1 Overview

The TPS22960 is a dual-channel load switch. The two channels can be independently controlled using the ONx pins. Each channel has an $85-\Omega$ quick discharge resistance from $V_{\text {OUTx }}$ to $G N D$ when disabled. A single control pin (SR) is used to set the slew rate for both channels..

### 8.2 Functional Block Diagram

TPS22960
www.ti.com

### 8.3 Feature Description

This section will discuss the features of the TPS22960 which have been summarized in Table 1.
Table 1. Feature Summary

| DEVICE | ron AT 3.3 V <br> (TYP) | SLEW RATE AT 3.3 V <br> (TYP) | QUICK OUTPUT <br> DISCHARGE | MAX OUTPUT <br> CURRENT | ENABLE |
| :---: | :---: | :---: | :---: | :---: | :---: |
| TPS22960 | $435 \mathrm{~m} \Omega$ | $75 \mu \mathrm{~s}$ with $\mathrm{SR}=$ low <br> $660 \mu \mathrm{~s}$ with $\mathrm{SR}=$ high | Yes | 500 mA | Active High |

(1) This feature discharges the output of the switch to ground through an $85-\Omega$ resistor, preventing the output from floating.

### 8.3.1 Output Slew Rate (SR) Control

The slew rate (rise time) of the device is internally controlled in order to avoid inrush current, and it can be slowed down if needed using the SR pin. At 3.3 V , TPS22960 features a $75-\mu \mathrm{s}$ rise time with the SR pin tied to ground, and a $660-\mu \mathrm{s}$ rise time with the SR pin tied high. Both channels will have the same slew rate set by the SR pin.

### 8.3.2 Quick Output Discharge (QOD)

Each channel of the TPS22960 includes an independent QOD feature. When the channel is disabled, a discharge resistor is connected between VOUTx and GND. This resistor has a typical value of $85 \Omega$ and prevents the output from floating while the switch is disabled.

### 8.4 Device Functional Modes

Table 2. Configurable Logic Function Table

| ONx | $\mathbf{V}_{\mathbf{I N x} \mathbf{x}}$ TO $\mathbf{V}_{\text {OUTx }}$ | $\mathbf{V}_{\text {OUTx }}$ TO GND |
| :---: | :---: | :---: |
| L | OFF | ON |
| $H$ | ON | OFF |

## 9 Application and Implementation

## NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

### 9.1.1 ON/OFF Control

The ON pin controls the state of the switch. Activating ON continuously holds the switch in the on state, as long as there is no fault. ON is active HI and has a low threshold, making it capable of interfacing with low voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with $1.2-\mathrm{V}, 1.8-\mathrm{V}, 2.5-\mathrm{V}$, or 3.3-V GPIOs.

### 9.1.2 Input Capacitor

To limit voltage drop or voltage transients, sufficient capacitance needs to be placed on the input side of the load switch (from $\mathrm{V}_{\mathbb{I N}}$ to GND). In most cases, a $1-\mu \mathrm{F}$ ceramic capacitor, $\mathrm{C}_{\mathbb{N}}$, placed close to the pins is usually sufficient. However, when switching heavy capacitive loads, higher values of $\mathrm{C}_{\mathbb{I N}}$ may be needed to prevent the system supply voltage from dropping.

### 9.1.3 Output Capacitor

The integral body diode in the PMOS switch will allow reverse current flow if $\mathrm{V}_{\mathrm{OUT}}$ exceeds $\mathrm{V}_{\mathbb{I N}}$. $A C_{\llcorner }$greater than $\mathrm{C}_{\text {IN }}$ can cause $\mathrm{V}_{\text {Out }}$ to exceed $\mathrm{V}_{\text {IN }}$ if the system supply is removed. In the case where the system supply could be removed and reverse current is a concern, a $\mathrm{C}_{\mathbb{I N}}$ greater than $\mathrm{C}_{\mathrm{L}}$ is recommended.

### 9.2 Typical Application

Figure 29. Typical Application Schematic

TPS22960
www.ti.com

## Typical Application (continued)

### 9.2.1 Design Requirements

For this design example, use input parameters in Table 3.
Table 3. Design Parameters

| PARAMETER | EXAMPLE VALUE |
| :---: | :---: |
| $\mathrm{V}_{\mathrm{IN}}$ | 3.3 V |
| $\mathrm{C}_{\mathrm{L}}$ | $22 \mu \mathrm{~F}$ |
| Maximum acceptable inrush current | 200 mA |

### 9.2.2 Detailed Design Procedure

### 9.2.2.1 Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to the set value (in this example, 3.3 V ). This charge arrives in the form of inrush current. Inrush current can be calculated using the following equation:

$$
\begin{equation*}
\text { Inrush Current = C } \times \mathrm{dV} / \mathrm{dt} \tag{1}
\end{equation*}
$$

Where:
$C=$ output capacitance
$d V=$ output voltage
$d t=$ rise time

The TPS22960 offers selectable rise time control for $\mathrm{V}_{\text {OUT }}$. This feature allows the user to control the inrush current during turnon. Equation 1 can be used to find the required rise time to limit the inrush current to the design requirements

$$
\begin{align*}
200 \mathrm{~mA} & =22 \mu \mathrm{~F} \times(3.3 \mathrm{~V} \times 80 \%) / \mathrm{dt}  \tag{2}\\
\mathrm{dt} & =290 \mu \mathrm{~s}(4)
\end{align*}
$$

To ensure an inrush current of less than $200 \mathrm{~mA}, \mathrm{SR}$ must be set high for a rise time greater than $290 \mu \mathrm{~s}$. The following application curves show the different inrush for each SR setting in this design example.

### 9.2.3 Application Curves

Figure 30. Inrush Current with SR = Low

Figure 31. Inrush Current with SR = High

## 10 Power Supply Recommendations

The device is designed to operate from an input voltage range of 1.62 V to 5.5 V . The power supply should be well-regulated and placed as close to the device terminals as possible. It must be able to withstand all transient and load current steps. In most situations, using an input capacitance of $1 \mu \mathrm{~F}$ is sufficient to prevent the supply voltage from dipping when the switch is turned on. In cases where the power supply is slow to respond to a large transient current or large load current step, additional bulk capacitance may be required on the input
The requirements for larger input capacitance can be mitigated by selecting the slower slew rate +SR=high. This will cause the load switch to turn on more slowly and limit the inrush current.

## 11 Layout

### 11.1 Layout Guidelines

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal and short-circuit operation. Using wide traces for $\mathrm{VI}_{\mathrm{N}}, \mathrm{V}_{\mathrm{OUT}}$, and GND will help minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

### 11.2 Layout Example

## PACKAGING INFORMATION

| Orderable Device | Status <br> (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan <br> (2) | Lead finish/ Ball material (6) | MSL Peak Temp <br> (3) | Op Temp ( ${ }^{\circ} \mathrm{C}$ ) | Device Marking <br> (4/5) | Samples |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TPS22960DCNR | ACTIVE | SOT-23 | DCN | 8 | 3000 | RoHS \& Green | NIPDAU | Level-1-260C-UNLIM | -40 to 85 | (NFRO, NFRR) | Samples |
| TPS22960RSER | ACTIVE | UQFN | RSE | 8 | 3000 | RoHS \& Green | NIPDAUAG | Level-1-260C-UNLIM | -40 to 85 | 72 | Samples |
| TPS22960RSET | ACTIVE | UQFN | RSE | 8 | 250 | RoHS \& Green | NIPDAUAG | Level-1-260C-UNLIM | -40 to 85 | 72 | Samples |

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

## TAPE AND REEL INFORMATION

*All dimensions are nominal

| Device | Package <br> Type | Package <br> Drawing | Pins | SPQ | Reel <br> Diameter <br> $(\mathbf{m m})$ | Reel <br> Width <br> W1 $(\mathbf{m m})$ | A0 <br> $(\mathbf{m m})$ | B0 <br> $(\mathbf{m m})$ | K0 <br> $(\mathbf{m m})$ | P1 <br> $(\mathbf{m m})$ | W <br> $(\mathbf{m m})$ | Pin1 <br> Quadrant |

*All dimensions are nominal

| Device | Package Type | Package Drawing | Pins | SPQ | Length (mm) | Width (mm) | Height (mm) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TPS22960DCNR | SOT-23 | DCN | 8 | 3000 | 183.0 | 183.0 | 20.0 |
| TPS22960RSER | UQFN | RSE | 8 | 3000 | 183.0 | 183.0 | 20.0 |
| TPS22960RSET | UQFN | RSE | 8 | 250 | 183.0 | 183.0 | 20.0 |

DCN (R-PDSO-G8)
PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Package outline exclusive of metal burr \& dambar protrusion/intrusion.
D. Package outline inclusive of solder plating.
E. A visual index feature must be located within the Pin 1 index area.
F. Falls within JEDEC M0-178 Variation BA.
G. Body dimensions do not include flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

DCN (R-PDSO-G8)
PLASTIC SMALL-OUTLINE PACKAGE (DIE DOWN)

NOTES: A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC-7351 is recommended for alternate designs.
D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525.
E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

SOLDER MASK DETAILS
NOT TO SCALE

NOTES: (continued)
3. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).

SOLDER PASTE EXAMPLE BASED ON 0.1 mm THICKNESS SCALE: 30X

NOTES: (continued)
5. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.
