Note:

1. Measured peak-to-peak. Tested with Agilent 53132A frequency counter. Due to the low operating frequency, the gate time must be ≥ 100 ms to ensure an accurate frequency measurement.
2. Stability is specified for two operating voltage ranges. Stability progressively degrades with supply voltage below 1.5V. Measured peak-to-peak. Inclusive of initial tolerance at +25°C, and variations over operating temperature, rated power supply voltage and load.
3. Core operating current does not include output driver operating current or load current. To derive total operating current (no load), add core operating current + output driver operating current, where output driver operating current = $C_{driver} * V_{out} * F_{out}$.
4. Measured from the time V_{dd} reaches 1.5V.
5. Board-level underfill (BLUF) is not recommended for 1508 CSP package as it will cause a shift in the frequency tolerance.
6. NanoDrive™ is a SiTime trademark.

2012 SMD package:

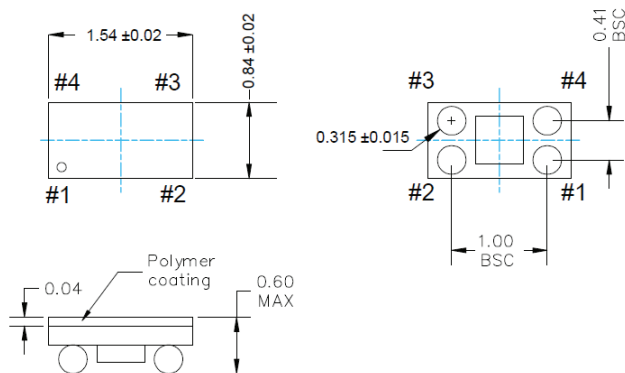

Recommended Land Pattern

Pin	Name	I/O	Functionality
1	NC	No Connect	No connection. Will not respond to any input signal.
2	GND	Power Supply Ground	Connect to ground. All GND pins must be connected to power supply ground.
3	CLK Out	OUT	Oscillator clock output.
4	V _{dd}	Power Supply	Connect to power supply 1.5V ≤ V _{dd} ≤ 3.63V for operation over -40°C to +85°C temperature range. Under normal operating conditions, V _{dd} doesn't require external bypass/decoupling capacitor(s). Internal power supply filtering will reject more than ±150mVpp with frequency components through 10MHz.

1508 CSP package:

Recommended Land Pattern
